GLACE BAY

(S. I. C. in Canadian Courier.)

Glace Bay, which, jointly with its fourteen mile distant neighbor, Sydney, has been so much before the public eye within the last few months, is, above everything else, undoubtedly a region of coal. Very many years ago the French, who were among the earliest settlers in Cape Breton, realised that rich coal mines abounded on the island, and as early as 1718 we read that the fuel used in Louisburg was brought chiefly from Morienne, now known as Cow Bay. (What a pity that all over Canada, so many of the original expressive and often euphonious French or Indian names have been or are being Anglicised into harsh and commonplace titles!) The name Glace Bay (Bay of Ice) is also an inheritance from the French settlers. It is now, however, more generally pronounced so as to rhyme with "race."

For about seventy years, from 1758 on, the mines were worked in a fitful and unsatisfactory manner, but not until 1865 was any really active interest taken in the operations. In that year, Mr. E. P. Archibald and others developed the Harbor Pit, as it was then called. But it was in 1893 that the Dominion Coal Company took hold and that date is still known as "the year of the boom." Up till then, the population consisted chiefly of Scotch and Irish, the descendants of those families who had emigrated here about 1820. Hardy, thrifty and frugal, these worthy people managed to make a comfortable living by fishing and farming, little dreaming of the vast undeveloped wealth around and underneath them. But with the boom the development of the vast coal areas began on a large scale, and to-day, Glace Bay and the neighboring towns of Dominion, New Aberdeen, Bridgeport, Caledonia, Reserve, Lingan and Waterford all testify to the success which has resulted from the mining operations carried on by the Dominion Coal Company. The population has grown from a few thousands to between eighteen and twenty thousand and the nationalities represented are numerous and diverse.

As many as eight thousand miners have been in the employ of the Dominion Coal Company at one time, and no less than twelve collieries have been opened and worked. Of these, No. 2 is the oldest and largest, indeed this mine is one of the largest in the world, and surely it may also be termed one of the most famous, for in it lies the Phelan seam, rendered notorious by the great Steel and Coal dispute, so recently settled by the decision handed down by the Privy Council.

Glace Bay has good electric light, an excellent sewerage and water system, the main streets are paved with bithulithic and there is an hourly service to Sydney.

The town itself has little to recommend it from the standpoint of natural beauty, chiefly owing to the absence of trees, but the climate is vigorous and bracing, and there is good bathing at Lingan Beach, and a view of the board Atlantic both pleasing and picturesque. And if the immediate surroundings of this great coal centre are not especially beautiful, there is, at Mira, a few miles distant by rail, one of the most lovely and delightful summer resorts in the whole island of Cape Breton. There, one can have fishing, shooting, boating and bathing, and board at a reasonable figure.

Minard's Liniment for sale everywhere.

TWO REGRETS.

Life is real if not altogether earnest among people of a type recently mentioned.

"I s'pose John is still taking life easy," said the woman in the spring wagon on the road to Alexandria.

"Yes," answered the woman who was carrying an armful of wood. "John has only two regrets in life. One is that he has to wake up to eat, and the other that he has to quit eating to sleep."

Your Druggist Will Tell You Murine Eye Remedy Relieves Sore Eyes, Strengthens Weak Eyes. Doesn't Smart, Soothes Eye Pain, and Sells for 50c. Try Murine in Your Eyes and in Baby's Eyes for Scaly Eyelids and Granulation.

BOUND TO FIND OUT.

(Boston Transcript.)

"A man came to my store the other day," said the chemist, "and handed me seven prescriptions to put up. "These, I see, are all for the cure of a cold," I remarked to him casually. 'Yes,' re returned, 'wud of theb cured by code last sidter, but I'b haged if I cad rebeber which wud.'"

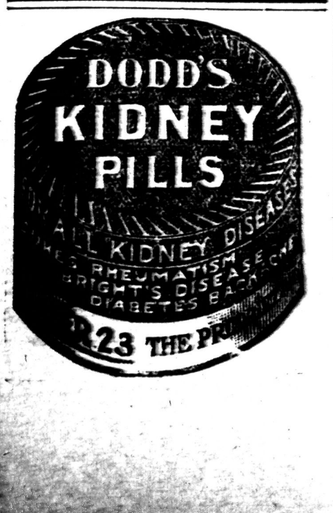
DUE TO SCORE NEXT TIME.

"You refuse me, do you, proud girl?" he howled. "Well, you're not doing anything original! This is the third time I've been turned down!"

"So I'm the third seeker, am I?" merrily responded the girl, thrusting her tongue in her cheek in a well meant but only partially successful effort to look like Mr. Steinfeldt.

WOMAN'S MOVEMENT.

There is hardly a feature of daily life that has not been blessed by it, for it is almost needless to say that whatever made women more quick of brain, more deft of hand, more pure and kind of heart, has tended to ameliorate the conditions of society, to make the lot of women more desirable and to render men at once happier and better.



PILES CURED AT HOME BY NEW ABSORPTION METHOD

If you suffer from bleeding, itching, blind or protruding Piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment; and will also send some of this home treatment free for trial, with references from your own locality if requested. Immediate relief and permanent cure assured. Send no money, but tell others of this offer. Write today to Mrs. M. Summers, Box P. 8, Windsor, Ont.

JUSTICE AND LUCRE.

Judge Giles Baker, of a Pennsylvania county, was likewise cashier at his home bank, says Browning's Magazine. A man presented a cheque one day for payment. He was a stranger. His evidence of identification was not satisfactory to the cashier.

"Why, Judge," said the man, "I've known you to sentence men to be hanged on no better evidence than this."

"Very likely," replied the judge, "but when it comes to letting go of cold cash we have to be mighty careful."

Minard's Liniment Cures Burns, Etc.

Hats for Horses.

Experiments made by Baron Henri d'Anchald, a French scientist, have resulted in proving that the well meant practice of affixing straw hats to the heads of horses, for the purpose of protecting them from the sun's heat not only fails to accomplish its purpose, but actually aggravates the suffering of the animals.

The experiments were made when the temperature of the atmosphere was 79 degrees in the shade. Bareheaded horses standing in the sun were found to have a temperature of 86 under their forelocks. When straw hats were put on them, their temperature under the forelocks rose to 103. A horse moving in the sun had a temperature of 83. Under a straw hat the temperature rose to 91, and under cloth to 100.

The explanation is that the covering prevents the free movement of air and serves to accumulate heat. The head covering for horses should be discarded, therefore, and relief should be given by frequent sponging of the head. Incidentally, the result of these experiments teaches, logically, that human beings, too, would be better off hatless on hot days.—Albany Journal.

Shiloh's Cure quickly stops coughs, cures colds, heals the throat and lungs. - - - 25 cents.

SCHEME OF PICKPOCKETS.

Of all the unique schemes ever evolved by pickpockets, one that was exposed in the middle west a couple of years ago easily carries off the honors. A certain street carnival company had been playing the medium-sized towns and so that big crowds were attracted. Invariably good were their free outdoor attractions during the organization's stay in any town the police were deluged with complaints from persons who had been robbed. But no arrests were made, although, as is always the case, the word was passed on to the police of the next town. Finally, an unusually astute sleuth saw a man connected with the show picking pockets, but was cunning enough not to make an arrest at the time. The man was shadowed, however, until he led the police to a rendezvous of a round dozen of other showmen who were surprised while sharing up about a bushel of watches, jewelry and other loot. One of the dips weakened under the "third degree" at police headquarters, and the truth was out. The star attraction with the carnival company was a high-diver who plunged from a lofty trestle into a small tank of water. It was during his act that the dipping was done. It developed that the high-diver was actual chief of the pickpockets. Instead of receiving a salary for his hazardous work, he turned over to the management of the company a share of the spoils under the arrangement that the latter were not to molest the pickpockets at work. Several of the dips were convicted, but it was impossible to get sufficient evidence against the show managers.—From "The Science of the Dip," in the July Bohemian.

To whom it may concern, this is to certify that I have used MINARD'S LINIMENT myself as well as prescribed it in my practice where a liniment was required and have never failed to get the desired effect.

C. A. KING, M. D.

Some Camping Hints.

When selecting a spot in which to pitch your tents see that it is well drained and level.

A brown waterproof cloth spread over the floor will make the quarters more comfortable.

Old campers also use folding beds, folding chairs and cooking utensils which will go inside of each other.

The cheapest and best stove is the kerosene burner.

Kerosene can be found any place, and is a clean, inexpensive substitute for wood.

For cool days and nights a small round stove or tent heater will add materially to the comfort of the camp.

The suburban camper takes care to pitch near some farmhouse, from which he can buy fresh vegetables.

A tent seven by nine feet will accommodate two people if cots are used for sleeping.

ALL THE DIFFERENCE.

(Tit-Bits.)

"For my part, I don't see any more harm in a game of cards than in a game of chess."

"But consider the associations."

"What associations?"

"Why, at chess you play with two bishops, while at cards you play with four knaves."

FLAG POLE 165 FEET HIGH.

Cup Defender Constitution's Steel Mast Erected in Battery Park.

When Hans Frederick Jorgensen, the rigger of the park department for the last twenty-four years, learned that the steel mast of the cup defender Constitution could be purchased for $600 he went to Park Commissioner Henry Smith and obtained his consent to buy it and erect it as a flag pole in Battery Park in place of the old liberty pole.

It was something of a job to get the pole into position. It was set on a steel base imbedded in concrete. On top of the pole is a weather vane and gilded ball.

The pole is the highest in the United States, if not in the world. The length of the main pole is 108 feet, diameter at the foot 22 1-3 inches and at the top 14 1-2 inches. The topmast is 56 feet in length, diameter at foot 12 inches and at top 3 1-2 inches. This makes the entire height of the pole 165 feet and the estimated weight is 5,800 pounds. It is made of steel.

The flag flown from the pole in ordinary weather is 40 by 60 feet, each stripe being a yard wide. The flag can be seen from the Narrows, as well as from places along the Jersey and the Brooklyn shore. On squally days a much smaller flag is run up.

The park department is considering the question of whether or not to erect a crosstree at the junction of the main pole and the topmast.

SOFT, WHITE HANDS

May be Obtained in One Night.

For preserving the hands as well as for preventing redness, roughness, and chapping and imparting that velvety softness much desired by women, Cuticura Soap, assisted by Cuticura Ointment, is believed to be superior to all other skin soaps. For those who work in corrosive liquids, or at occupations which tend to injure the hands, it is invaluable. One night treatment—Bathe and soak the hands on retiring in a strong, hot, creamy lather of Cuticura Soap. Dry and anoint freely with Cuticura Ointment. Wear during the night old loose gloves to protect the clothing from stain. For red, rough, and chapped hands, dry, fissured, itching, feverish palms, and shapeless nails with painful finger ends, this treatment is most effective.

Jolts for Mr. Graytop.

"Worse and worse," said Mr. Graytop. "I feel young, and I fancy I look young; but other people don't seem to agree with me on the looks.

"Drivers hold up for me in the street and say, 'Go ahead, old man;' young men get up to give me their seat in a car; children I meet in the street greet me sometimes smilingly as 'Grandpa;' various people seem to see about me signs of age; but the worst has happened lately.

"Twice within the past week when I have started to step down from the step of a street car solicitous conductors have put out their hand and clutched me till the car had come to a full stop.

"Can it be that I am really getting old?"

Constipation

is an enemy within the camp. It will undermine the strongest constitution and ruin the most vigorous health. It leads to indigestion, biliousness, impure blood, bad complexion, sick headaches, and is one of the most frequent causes of appendicitis. To neglect it is slow suicide. Dr. Morse's Indian Root Pills positively cure Constipation. They are entirely vegetable in composition and do not sicken, weaken or gripe. Preserve your health by taking

Dr. Morse's Indian Root Pills

Round the Arc Light.

The moonlit sea roared, but louder was the clatter of the myriad beetles about the arc-light on the broadwalk.

"Amazing things, beetles," the naturalist said. "There's a bombardier beetle, you know, that carries a gun of eighteen charges. Eighteen times, if pursued, this beetle can shoot; under cover of the noise and smoke he escapes.

"There's a diving beetle that catches fish. He has a natural diving suit that enables him to breathe under water. He will plunge down fifteen or twenty feet after a minnow or young shad.

"The sexton beetle spends its life burying dead animals. It lays twenty eggs in each carcass, and thus the young on hatching, have an abundance of juicy and high meat to feed on. Sexton beetles, working together, have been known to bury a rabbit.

"The skunk beetle is so called not without reason. Dare to come too near him in a garden, and rising on his hind legs, he will wage his antennae furiously and discharge the vilest odor at you. The common kitchen roach has this skunklike gift also. Hence I don't advise you to make a pet of him."

Minard's Liniment Cures Dandruff.

The Power of Oratory.

Can one imagine a more thrilling and exhilarating pleasure than that of swaying with one's words a listening host of people, warming or cooling their passions, bending their thoughts and wills in the direction of one's own thoughts and will, even as Bryan did at the Chicago convention in 1896? This power has wrought mightily for both good and evil, and it is astonishing that nowadays so few speakers should train themselves to wield so skilfully such an effective weapon. Every lawyer, every preacher, every politician, every man, in fact, who has occasion to address audiences, ought to study the technique of oratory so that he can at will, within his own sphere and limitations, interest and persuade his hearers.—Scribner's Magazine.

"Don't try to hurry me, young man. I don't never sign nothin' that I ain't read carefully."

Gives Clearness To Skin

Feeds and Purifies Blood and Thereby Keeps You in Good Health.

Most women and some men try to remove yellowishness of skin, blotches, dark lines under the eyes by cosmetiques. Such means are as useless as disappointing. When the skin lacks clearness, particularly when the body is emaciated, it is simply the stain upon the skin of impurities in the bowels that are carried about by the blood. Sluggish activity is certainly the cause of bad complexion even if regularity should be pretty fair.

Better than any cosmetique, because they remove the cause of skin discoloration, Dr. Hamilton's Pills ensure inward cleansing and activity. In addition to their laxative action they are a true tonic to all the eliminating organs, liver, kidneys, bowels, and glands. Dr. Hamilton's Pills remove the causes of all blood troubles that manifest themselves outwardly, and they fortify and strengthen the organs and thereby prevent a return of diseased conditions."

One box of Dr. Hamilton's Pills proves their merit, even one dose shows how different they are from other pills. 25c per box, at all dealers, or The Catarrhozone Co., Kingston, Canada.

SUBSTITUTION.

"Good morning, madam!" voiced the cheery salesman.

"Good morning!" echoed the quiet-looking matron, "have you something very choice in Irish lace?"

"Well—er—no; but here's something just as good as seventy-five cents a yard."

"Just as good?" doubtingly.

"Yes, yes; in fact, confidentially, superior to the real article. How much do you wish, please?"

"Just a yard," sweetly. "Here's your money."

"But, madam!"—in confusion, "you've made a mistake—this isn't money."

"No?" agreeably.

"Why, no; it's a matinee ticket."

"So it is!" sweetly. "But it represents seventy-five cents, and, while it isn't actual money, it's just as good. Adios."

The clerk fainted.—From the July Bohemian.

Preventive Dentistry.

Preventive medicine has a great field as yet scarcely exploited in the study of diseases of the teeth, the accompaniment if not the cause of so many other diseases of the digestive apparatus, and hence a main source of ill-health. American dentists have attained extraordinary skill. In the repair of decay and the correction of deformities and deficiencies, they perform truly wonderful feats. No class of scientific practitioners has done more than they for the alleviation of pain and discomfort. If the American teeth are not well cared for it is by no shortcomings of the dentists. But that original tendency to decay which appears to belong to American teeth in general, and which has made the dentist a necessary reliance from youth to age, has evidently a deeper source than his instruments can reach.

The child of well-to-do parents is expected to begin his visits to the dentist at least as soon as his first permanent teeth appear, and to continue them at shortening intervals throughout his life. But this early decay is not an accompaniment of luxury. It is found, in the public schools, that the same tendency shows itself in the children of the poor, who have not the advantage of early attention. And those who are seriously concerned with the problem of bringing up large numbers of children healthily are convinced that the dentist would often be of more service than the schoolmaster. Yet the dentist can only repair or check the decay he was powerless to prevent.

The problem is not one for the surgeon, but for the physician and the physiologist. They are not blind to it, but with all our scientific wisdom there is little sign of progress in this direction. The average American's teeth are infinitely better cared for and better preserved than a generation ago, but only through operative skill, not—as far as appears—by any such general improvement in the healthy nutrition of the teeth as would make their preservation a normal process rather than a surgical exploit.—Philadelphia Ledger.

Rules for a Long Life.

A Paris contemprorary has been instructing its readers how to live to a good age, drawing its conclusions from the lives and writings of distinguished men.

Michael Eugene Chevreul, the celebrated French chemist, who lived 103 years, was always frugal in regard to his diet, and considered a happy disposition to be an important factor contributing to his long life.

Victor Hugo had a tablet on the wall of his house with the following: "Rising at 6, dining at 10, supping at 6, retiring at 10 make the life of man ten times ten." The secret of Moltke's health lay in his great moderation in all things.

Sir Benjamin Ward Richardson declared that those who wished to reach a century must neither smoke nor drink. They should eat sparingly of meat, work as little as possible by artificial light, trouble themselves little about making a fortune, and never allow ambition to rule their lives.—London Globe.

On the principle thta he who gives quickly gives twice he who gives slowly doesn't have to give at all.

Only the thin skinned take consolation from the fact that beauty is only skin deep.

BICYCLES FOR LAND OR SEA.

The amphibicycle is equally at home in water and on land. It is the invention of a Frenchman of Lyons, and has a pair of cylindrical floats, a propeller and a rudder. On leaving the water the cylinders and nautical gear are lifted up so as to allow the wheel to run on the ground. The cyclist can then pedal his machine in the usual way. As the cylinders can be made of thin sheet metal, they need not be heavy. In the water the machine makes five or six mines an hour.

The floats, which end in a conical point, are attached to the bicycle frame by jointed supports so that they can be raised and lowered as desired, and can be fastened in place when the cycle is on the road. For operating a propeller a rubber covered friction wheel is employed, which is behind the tire of the rear cycle wheel, the small wheel's motion being transmitted by a bevel gearing to the propeller shaft. By using the proper combination of gearing the propeller can be reversed.

A small rudder is mounted at the front and is controlled by a rod passing from the front cycle fork into the water. The two cylinders are braced across by a rod in the rear of the machine. The amphibicycle as constructed at present weighs about 270 pounds and is about eight feet long and three feet six inches wide. The cylinders are about one foot in diameter.

HOW TO MAKE BABY SLEEP

The baby that cries half the night does not cry for nothing. It cries because it is not well, and has no other means of saying so. The chances are the trouble is due to some upsetting of the stomach or bowels, which would be speedily removed if the child were given a dose of Baby's Own Tablets. These Tablets make children sleep soundly and naturally because they remove the cause of the crossness and wakefulness. They are a blessing to children and a relief to worried mothers. Mrs. Joan Sickles, Douglastown, N. B., says: "If anything ails my little ones the first thing I give them is a dose of Baby's Own Tablets and they are soon well again." Sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Decline of Ancient English Fair.

After being held annually for 800 years Stow Green pleasure fair has practically ceased to exist.

Established by charter of Henry III., it ranked as one of the largest fairs in England for merchandise and lasted three weeks. All the large travelling shows in the country used to attend, and they covered nearly four acres of ground. The fair is now limited to two days, and when it commenced yesterday it only consisted of a few catchpenny devices.

This year the magistrates curtailed the hours for drinking, and it is expected the fair will soon collapse altogether.—From the London Standard.

DIFFERENCE IN THEM.

The head of a big firm of contractors was walking around the premises and stopped to converse with old George, a stableman.

"Well, George, how goes it?" he said.

"Fair to middlin', sir," George answered. "Fair to middlin'." And he continued to rub down a bay hoss, while the other looked on in silence. "Me and this 'ere hoss," George said, suddenly, "has worked for you sixteen year."

"Well, well," said the boss, thinking a little guiltily of George's very low wage. "And I suppose you are pretty highly valued, George, eh?"

"E—h!" said George. "Both of us was took ill last week, and they got a doctor for the hoss, but they just docked my pay!"

Greater Freedom for Press in Mexico.

The Chamber of Deputies will discuss the proposed new press law, or the Batalla bill, as it is known, during its present period of sessions, according to Congressman Diodoro Batalla.

For some time several members of the chamber have been considering the advisability of introducing radical reforms in the present law on publications with the view of enlarging the liberties of journalists and publishers in expressing thoughts and opinions, the present law being considered as too strict. Congressman Batalla feels confident that it will be passed.—Mexican Herald.
