MME. DE STAEL.

One of the Greatest and Most Influential Women in Europe.

Madame de Stael compels attention. Forceful and original in her personality, she divides Europe into admirers and detractors, while her feud with Napoleon added to the curiosity and interest which she aroused. Her commemorative year should be a matter of interest to all whose countries which have banded themselves in the effort to extirpate tyranny, for no more ardent lover of liberty could be found than Madame de Stael. Love of liberty was born and bred in her; for Germaine Necker, as she was before her marriage, was the daughter of a Protestant Genevese who, brought to Paris on financial affairs, had, by the advice of the most iminent men in France, been included in the councils of the king.

Necker's daughter, from an early age, listened in her mother's salon to the talk of liberty and reform which like the wind before the storm was blowing in gusts through the hothouse atmosphere of the ancient regime. As a precocious girl she imbibed that love of the conversation of the brilliant men and women of her milieu, the lack of which she deplored in London and in St. Petersburg, and for which she pined in the sylvan solitudes of Coppet, "la paix infernale" de Coppet she termed it. As the wife of the Swedish ambassador in Paris, Madame de Stael enjoyed a position in society which she greatly raised by her ambition and ability. She made of her salon a meeting place for men of all political creeds, boasting that "on s'entent toujours a une certaine hauteur," but it was a dangerous game to play, and Madame Antionette herself, became, like the Queen of France, the butt of scurrilous lampoons, and unpopular with the public. She only left Paris at the last moment, in 1792. From Coppet she crosses to England, joining her friends, Narbonne, Talleyrand, and Montmorency, fleeing from the spleen of her own thoughts, and forming the center of that little coterie of emigres which found safety and a certain relative enjoyment at Juniper hall, in the peaceful Surrey glades. This was an interlude in the eventful life of Madame de Stael. She described it as "four months of happiness saved from the shipwreck of life."

But the emigres of Juniper hall had their distractions. Conversation was always impossible, and was not Talleyrand of the party? Susan Burney, then Mrs. Philips, lifts a corner of the curtain at "Juniper," and shows the "Juniperiens" at their literary amusements. She is invited to dine and hear M. de Lally Totendal read his "Mort de Strafmord," but she is dissappointed in him, there is nothing "distinque" in his manner; both in appearance and in wit he is far removed from the rest of the Juniperiens, in fact, as Talleyrand puts it, a "tres bo..nets garcon te rien de plus." On another evening Madame de Stael is very gay and M. de Talleyrand very "comeque." He criticises Madame de Stael's reading of prose with great sangfroid: "You read prose very badly; you have a kind of sing song, a cadence; a monotony, which is not at all good; one would think you were reading poetry, and it produces a very bad effect." They talked over a number of their friends and acquaintances with the utmost candor, and sometimes with the most comic humor imaginable—M. de Lally, M. de LaFayette, la Princess d.Henin, la Princess de Poix.

Madame de Stael did not waste her time in Juniper. Besides writing some portions of her book "Des Passions," the mistakes in the style of which Talleyrand amused himself by correcting, she was also gathering material for her "Considerations sur les principaux evenments de la Revolution francaise," which, among other things apparently fore French Revolution, contained the chapter on the English constitution and society. Apart from the grateful recollections which Madame de Stael preserved of her stay in England, she held that country in strong admiration during her entire life.

In her eyes England stood for liberty, the dearest thing on earth in her eyes, and she said that no people in Europe could be compared with the English since 1688, for "there lay 120 years of social improvement between them and the nations of the continent." "Admirable monument of the moral greatness of man," she exclaims of the British constitution. She sees in this achievement of liberty the essential protection which enabled England, alone, of all European powers, to escape the grasp of Napoleon. "The green isle which alone resisted the enslavement of Europe," she says, as she nears the English coast on her journey from Sweden, and, in a chapter of her "Considerations." Those people who will not recognize the ascendency of liberty in the power of England, continue to repeat that the English would have been beaten by Bonaparte, like all the continental nations, if they had not been protected by the sea. This opinion cannot be refuted by experience, but I do not doubt that, had Great Britain been re-united to the European continent by the act of some Leviatham, she would doubtless have suffered more and her riches would have decreased, yet the public spirit of a free nations is such that she would never have fallen beneath the yoke of the foreigner."

The foresight of this woman in her consideration of the status of nations is not the least remarkable portion of her writings. She predicts a great future for North America, and in her eulogia of her father she thinks it necessary to explain that in spite of his good wishes for the success of the American colonies he advised Louis XVI not to enter into war on their behalf. Necker was a financier and he did not think that any political benefits could accrue to France which would make up for the expenditure entailed by war; neither did he think it permissible for one country to declare war on another without positive necessity.—Buffalo Commercial.

Lachute, Que., 25th Sept., 1908.
Minard's Liniment Co., Limited.

Gentlemen,—Ever since coming home from the Boer war I have been bothered with running fever sores on my legs, I tried many salves and liniments; also doctored continuously for the blood, but got no permanent relief, till last winter when my mother got me to try MINARD'S LINIMENT. The effect of which was almost magical. Two bottles completely cured me and I have worked every working day since.

Yours gratefully,
JOHN WALSH.

SKIN TROUBLE FOR 25 YEARS

On Hands and Fingers. Could Not Work. Cuticura Healed.

"After vaccination I was affected with skin trouble on my left arm and later it set in on both hands and my fingers. I suffered so much I was unable to do any kind of work, and it used to keep me awake at night. I suffered an awful itching and burning, and my fingers were swollen.

"I had the trouble over twenty-five years when I read of Cuticura Soap and Ointment. I tried it with success so I bought more, and now my hands are healed." (Signed) Miss A. Cadieux, Chambly, Canton, Que., Mar. 25, '17.

Use these super-creamy emollients for every-day toilet purposes and prevent these distressing troubles.

For Free Sample Each by Mail address post-card "Cuticura, Dept. A, Boston, U. S. A." Sold everywhere.

SELECT MEDICINE CAREFULLY

Purgatives are dangerous. They gripe, cause burning pains and make the constipated condition worse. Physicians say the most ideal laxative is Dr. Hamilton's Pills of Mandrake and Butternut; they are exceedingly mild, composed only of health-giving vegetable extracts. Dr. Hamilton's Pills restore activity to the bowels, strengthen the stomach and purify the blood. For constipation, sick headache, biliousness and disordered digestion no medicine on earth makes such remarkable cures as Dr. Hamilton's Pills. Try a 25c. box yourself.

STANDARD SEED.

The Provincial Institution Farms Start to Grow It.

Toronto, May 17.—One hundred and eighty-one acres of land scattered about the various public institutions are being seeded this year for purpose of growing seed of all kinds as the forerunner of an Ontario seed-growing industry. The policy of the Department of Agriculture, which has the co-operation of the Provincial Secretary's Department, was outlined some time ago. It is now being put into effect. At Fort William 32 acres was planted, at Burwash 15, London 22, Woodstock 5, Hamilton 25, Whitby 55, and Brockville 27. The planting includes 27 acres of potatoes, 60 of oats, 37 of barley, 27 of wheat, 10 of mangles 10 of peas and 10 of beans.

Minard's Liniment Cures Diphtheria.

New Workmen's Houses.

—War does not stop building.

—Workmen must have houses to live in.

—Dunfermline, Scotland, has 2000 new workingmen's houses.

—These form a model suburban garden city called Rosyth.

—The streets are wide; garden space is provided in front of each house.

—There are broad sidewalks, along which trees are planted in regular rows.

—Side yards in which vegetables for the family use may be raised, are a feature.

—The houses themselves, however, are rather small ,having but two rooms, a scullery and two closets.

—These workmen's houses rent for $2.35 a week, electric light included; and the maximum rentals are only enough to permit the owners 3.65 per cent. on the total capital cost.

WELL SATISFIED WITH BABY'S OWN TABLETS

Mrs. Edmond Gagne, Tikuape, Que., writes: "I am well satisfied with Baby's Own Tablets. They are absolutely necessary in homes where there are little children. They cured my baby of constipation, and I would not be without them." Thousands of mothers always keep a box of Baby's Own Tablets on hand as a safeguard against constipation, colic, colds, simple fevers or any other of the minor ills of little ones. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville, Ont.

SCIENCE JOTTINGS.

Some hotel proprietors are trying the expedient of maintaining a cool room in which to keep summer vegetables for winter use.

The Dundee manufacturers are about to give up the use of earthenware, glass jars and tins for a stout cardboard container is now being made, and experiments with it have proved highly successful.

One of the exhibits at recent country fairs was a tractor with its steering wheels cramped so that it would describe a circle. Without a driver or other attention the machine maintained its endless trip for five days.

A kitchen motor performs all the tasks which the housewife has heretofore been compelled to do by hand. This includes the bread mixer, the ice cream freezer, meat chopper, egg beater and other operations.

A forestry service is to be established in China with the hope of bringing down the price of lumber.

Hawaii was once a part of the Asiatic continent, says a learned investigator.

Irish emigration has been gradually reduced by the war.

So enormous has the business of jam-making become in Dundee, Scotland, since the great firms there organized to supply preserves to the British army and navy, that the tins in which they put up one week's supply alone "would, if stood end on end, form a column fully forty miles high. It is no unusual thing for this firm to deal with 100,000,000 oranges, and all kinds of fruit are dealt with on a similar scale."

The intake canals of the Niagara power plants are kept free from ice by the movements of an electric motor-boat running back and forth supplied with current by means of a trolley.

The protein content of cottonseed flour is in excess of that of meat, and efforts are being made to popularize it as a food.

Castor oil is the favorite lubricant for aeroplanes because it is so little affected by changes of temperature. This demand has caused the price to be more than doubled.

The semaphores of the traffic police in some of the large cities are supplied with a system of mirrors by which the operators are enabled to see in all directions about them.

Minard's Liniment Cures Colds, Etc.

POTATO BUTTER.

In view of the extreme scarcity of butter, the British Food Ministry has issued a recipe for potato butter which costs less than ten cents a pound and is said to be very satisfactory. Following is the method for making it:

Peel the potatoes and boil until they fall to pieces and become floury. Then rub through a fine sieve into a warmed basin fourteen ounces of potatoes and add two ounces of oleomargarine and one teaspoonful of salt. Stir until smooth and then mould into rolls and keep in a cool place. If the intention is to keep it beyond a few days a butter preservative should be added.

"COLD IN THE HEAD"

is an acute attack of Nasal Catarrh. Persons who are subject to frequent "colds in the head" will find that the use of HALL'S CATARRH MEDICINE will build up the System, cleanse the Blood and render them less liable to colds. Repeated attacks of Acute Catarrh may lead to Chronic Catarrh.

HALL'S CATARRH MEDICINE is taken internally and acts through the Blood on the Mucous Surfaces of the System.

All Druggists 75c. Testimonials free.

$100.00 for any case of catarrh that HALL'S CATARRH MEDICINE will not cure.

F. J. Cheney & Co., Toledo, Ohio.

MILK NOURISHES.

The Ideal Food in Health and Disease.

Milk being in itself nearly a complete food should be given the most prominent place in the daily diet of every home.

The cost of living can be reduced by substituting milk for eggs and meat. It contains all the food elements found in eggs and meat, one-half pint of milk contains 160 food units. To get the same number of food units by eating eggs, two eggs containing 160 food units at a cost of 8 cents or more would have to be used.

Meat, eggs and milk belong to the class of foods known as "building foods," and are needed to repair the wear and tear of the human organism, and in childhood to make the body grow.

A pint of milk supplies as much building food as two French lamb chops, costing 15 cents or more, and in addition supplies double the amount of fuel to keep the body growing.

Milk contains "salt," so needful in maintaining the health of the body.

Few foods can replace milk as a source of lime for the growing child. It is also rich in phosphorous. Even at high prices milk is a cheap source of supplying these elements. Milk is low in iron content, but it has the peculiar advantage of increasing the ability of the body to make use of iron from other sources.

Recent researches show that in addition to the commonly-accepted essential food elements, such as protein, fat, starch, sugar, lime, acids, salts and flavors, there are other elements necessary. Disease of nutrition seem to depend upon the absence of such factors or elements in the diet. Vitamines is the name given to these little understood elements. One of these substances seems to be soluble in fat and the other in water. Milk-fat seems to contain the former, while it is absent in or deficient in lard and all vegetable oils. The water soluble element is also present in milk and absent in many vegetable foods, especially as they are prepared for commerce. Milk is, therefore, in itself a nearly complete food, and in proper combinations with vegetable sources food, forms the best, most reliable and cheapest guarantee of completeness in diet.

Parallel Stories.

When Napoleon was a student at Brienne he happened to be asked by one of the examiners the following question: "Supposing you were in an invested town, threatened with starvation, how would you supply yourself with provisions?" "From the enemy," replied the sub-lieutenant of artillery. And this answer so pleased the examiners that they passed him without further questioning. Now, Napoleon's answer was by no means original, for one of Suvaroff's sergeants obtained promotion from the ranks by giving the very same answer when asked the very same question.

SOLDIERS OF THE SOIL.

THE CALL.

Come! Join the Soldiers of the Soil
Aid your country by your toil,
Help King George his foes to foil—
Dig for liberty.

Blue-Nose lads, to you the call—
Listen to it, one and all,
Hearken, ere there's worse befall—
Hoe for victory.

You can help the boys across,
You can aid them win the toss,
You can help to balance loss.
Working loyally.

THE ANSWER.

Yes, Soldiers of the Soil we'll be,
True and steady, staunch and free,
Farming right merrily—
To win the day.

We'll tend the horse and speed the plow,
Feed the pigs and milk the cow,
Toss the clover in the mow,
For victory.

We'll chop the wood and hoe the corn,
Fight weeds and bugs from early morn,
No farm-yard labor we will scorn—
True Soldiers be.

Minard's Liniment Cures Garget in Cows.

RHUBARB GOOD NOW.

Three things which show that spring is coming are marbles, skipping ropes and rhubarb. When we see boys playing marbles, girls skipping ropes and housewives buying rhubarb we might as well be looking round for the first bluebirds of spring.

Rhubarb is one of Nature's own restorers, too. We need it to tone up our systems and give us more snap. If your family will not eat it plain stewed, try dressing it up a bit fancy as follows:

RHUBARB CONSERVE.

Two cupfuls rhubarb, cut fine; 3-4 cupful sugar, 1 orange, juice and grated rind; 1 lemon, juice and grated rind; 1-2 cupful raisins.

Combine all the ingredients and heat the mixture until the sugar is dissolved. Cook until tender. Serve cold. Nuts, figs, or pineapple may be substituted for the raisins.

Two Good Potato Dishes.

A delicious potato omlet is made by dicing potatoes very small and sauteing them in hot fat. Make a puffy omlet and just before folding over add the potatoes, and you have a substantial dish fit for a king.

Potatoes and green peppers make a good combination. Boil diced raw potatoes and thin rings of green peppers about 12 or 15 minutes. When nearly done put in a baking dish and dredge with flour. Cover with hot milk and dot with margarine. Grated cheese may be added if liked. Bake until a delicate brown and serve at once.

ONE TOUCH OF PUTNAM'S STOPS CORN SORENESS

No need to walk on the edge of your soles to save a sore corn—Putnam's brings instant relief. Apply it to a tender corn, and watch that corn shrivel and dry up. Absolutely painless. No matter how tough the corn is, you can peel it right off by using Putnam's Painless Corn Extractor. Costs but a quarter—why pay more for something not so good. Get Putnam's to-day.

STRANGE PHENOMENA.

Burning Spring and Colored Light in Japan Water.

Strange lights hover over the waters of Japan at various places. The burning spring that appears at intervals of several years in one of the land-locked bays is a natural phenomenon that has attracted the attention of the scientific world. A new and curious spectacle made its appearance in Shiragawa Bay on the evenings of October 17 and 19, when a myriad of pale-green lights shone in the placid waters and attracted thousands of spectators to the shore.

The savants of Japan are giving much attention to this curious freak of nature. One college professor likened the exhibition to the innumerable lights seen off the coast of Chikuzen and Chikugo in Kyrusk. The latter lights,however, are of a yellow-red, orange color, whereas those seen in Shinagawa Bay were pale-green.

Dr. Kishigami, of the College of Agriculture in the Tokio, Imperial university, collected a quantity of water from the bay on October 19. He has declared that the light is caused by countless animalcules. He describes these insects as gymnogynimus, belonging to the class Flagellata. Each measures one twelve-hundredth of an inch and has an alimentary canal. These insects must have been always present in the waters of that bay, but an excess of vegetable matter in the water this fall has so fattened and stimulated the animalcull that they have become unusually luminous. The learned professor cites the appearance of the same phenomena at Hamburg in 1830, since which time no record exists of its recurrence until now. The insects live at the bottom of the sea and come to the surface on rare occasions for oxygen.

Minard's Liniment Cures Distemper.

THE TEA TRADE.

How It Has Affected the World's Development.

In the golden days of the East India trade, about which retired skippers still talk, tea commanded fancy prices and the first ship to arrive at Liverpool, New York or Boston with new crop tea often made a fortune for her owner. That was before the opium war, when the ports of China and Japan were still closed, and the teas of those countries were brought down to Singapore in junks and surpans for sale to English, American, Dutch and other Occidental buyers. It was the tea trade that developed the American clipper in those early years to land the first cargo of new tea. Such stirring tales of these voyages were written and told that tea became well advertised in the uttermost parts of the earth and the demand for it surpassed the productive capacity of China and Japanese ports and the creation of a great free port by the British at Hong Kong cheapened the handling of tea, but did not add much to the available supply.

More than eighty years ago the firm of Page, Appleton & Bacon, of Boston, were active in East India trade. A supercargo of one of their vessels induced officials of the East India Company and some Hindu babus to experiment with tea gardens in the hill country north of Calcutta. Neither he nor his firm lived to see Darjeling teas become a factor in the trade, but that was where the start was made. The same supercargo, trading on his own account, introduced Carolian rice and American cottonseed into India for the purpose of improving those crops, but the attempts were not crowned with success. The tea boom came after his time, a common irony of fate.

When British and Dutch merchants began to least about for larger supplies of tea to meet the rapidly expanding requirements of the western world, the Dutch found the hills of Java well adapted for its cultivation. Java also produced the best coffee of which any considerable quantity could be marketed. England did not relish the idea of having little Holland attain prominence in tea as she had won in coffee planting, and English merchants doing business in Calcutta discovered about the same time that tea from Darjeling enjoyed a preference over China teas in the native bazaars of the capital of Bengal.

Mountainous Ceylon was also well suited for the tea plant, which will grow wherever wild rhoddendrons are found, as in the hills of our South Atlantic States British capital was poured out like water, perhaps too fast at first, but the English now control the best part of the tea trade of the world. From a small beginning half a century ago the production of tea in British India, including Ceylon, now exceeds 532,000,000 pounds a year out of the world's total output of about 90,000,000 pounds. China produces about 200,000,000 pounds a year; Japan about 70,000,000 pounds; Formosa about 3,000,000, and Java about 71,000,000 pounds. Only negligible quantities are produced elsewhere.

While the English beat the Dutch in the race for primacy in the tea trade, they lost their fight for similar control of coffee production. They attempted to turn Ceylon into a great source of coffee supplies, but Ceylon coffee was not quite good enough to compete with Java coffee and Brazil was able to turn out more coffee than either, though of somewhat lower grade. Ceylon turned to rubber with better success. The Dutch view the failure of Ceylon coffee to compete with Java with considerable satisfaction because England took Ceylon from Holland under circumstances that would not confer a good title in The Hague court of arbitration.

A Cure for Pimples

"You don't need mercury, potash or any other strong mineral to cure pimples caused by poor blood. Take Extract of Roots—druggist calls it "Mother Seigel's Curative Syrup—and your skin will clear up as fresh as a baby's. It will sweeten your stomach and regulate your bowels." WANTED — PROBATIONERS TO train for nurses. Apply Wellandra Hospital, St. Catharines, Ont.

BUSINESS CHANCES.

SPLENDID GROCERY BUSINESS — town of Port Colborne; large turnover; military necessity reason for selling. E. W. Moiser.

FOR SALE—GREAT CHANCE FOR doctor; residence and office well located. Particulars from Geo. W. Hall, 321 Colborne street, Brantford, Ont.

Liverpool's Girl Conductors.

"Does this car travel by Dale street or by Church street?" asked an anxious passenger as he stepped aboard at the corner of Tunnel road, Liverpool, during a darkness which could be felt. "I do not know," was the girl conductor's naive reply. When the passenger expressed surprise coupled with pain, as he had fear of missing the last train to Southport, the conductress added the explanation that her "duty was merely to collect the fares," and she "had nothing to do with the route the car might take." With this the belated one had fain to be content.

It is a constant source of wonder to some men how the world got along before they were born.

Strong Enough to do Homestead Duty

SIDNEY BENT GIVES THE CREDIT TO DODD'S KIDNEY PILLS.

Six Years Ago He Had Kidney Disease So Bad His Friends Said He Would Not Live Long.

Lydiard, Sask., June 3.—Strong and healthy, and able to do the heavy work of homestead duty, Mr Sidney Bent, a well-known settler here, is telling his friends of the great benefits he received from using Dodd's Kidney Pills.

"Six years ago I suffered a lot from my back and kidneys," Mr. Brent says. "I tried a lot of medicine and drugs, but kept getting worse, till some of my friends said I would not live long.

"Four years ago I decided to try Dodd's Kidney Pills. After taking the first box I felt so much better I decided to continue the treatment.

"The result is I have been able to do homestead duty for the last three winters.

"I would advise anyone suffering from kidney trouble to take Dodd's Kidney Pills."

Dodd's Kidney Pills have made their reputation by curing kidney diseases and the ills that spring from diseased kidneys. They are no cure-all. But if you are suffering from rheumatism, lumbago, sore back, diabetes or some other form of kidney trouble, ask your neighbors what Dodd's Kidney Pills have done for them.
