France is Europe's banker. For a country to acquire that position, her people must be remarkably thrifty. The people of France are exceptionally so—they begin to save in their youth. No matter how small their income, a portion is regularly set apart for future need; in old age they enjoy the fruits of their thrift. They are a happy nation.

The opening of a savings account is the best way to acquire that habit of saving without which no ability to earn can insure you against possible misfortune

# VARICOSE VEINS CURED

NO NAMES USED WITHOUT WRITTEN CONSENT.

**Confined to His Home for Weeks.**

"Heavy work, severe straining and evil habits in youth brought on Varicose Veins. When I worked hard the aching would become severe and I was often laid up for a week at a time. My family physician told me an operation was my only hope—but I dreaded it. I tried several specialists, but soon found out all they wanted was my money. I commenced to look upon all doctors as little better than rogues. One day my boss asked me why I was off work so much and I told him my condition. He advised me to consult Drs. Kennedy & Kennedy, as he had taken treatment from them himself and knew they were square and skillful. I wrote them and got THE NEW METHOD TREATMENT. My progress was somewhat slow and during the first month's treatment I was somewhat discouraged. However, I continued treatment for three months longer and was rewarded with a complete cure. I could only earn $12 a week in a machine shop before treatment, now I am earning $21 and never loose a day. I wish all sufferers knew of your valuable treatment.
HENRY C. LOCUST.

## HAS YOUR BLOOD BEEN DISEASED?

BLOOD POISONS are the most prevalent and most serious diseases. They sap the very life blood of the victim and unless entirely eradicated from the system will cause serious complications. Beware of Mercury. It may suppress the symptoms—our NEW METHOD cures all blood diseases.

YOUNG OR MIDDLE AGED MEN.—Imprudent acts or later excesses have broken down your system. You feel the symptoms stealing over you. Mentally, physically and vitally you are not the man you used to be or should be. Will you heed the danger signals?

READER Are you a victim? Have you lost hope? Are you intending to marry? Has your blood been diseased? Have you any weakness? Our NEW METHOD TREATMENT will cure you. What it has done for others it will do for you. Consultation Free. No matter who has treated you, write for an honest opinion Free of Charge. Books Free—"Boyhood, Manhood, Fatherhood." (Illustrated) on Diseases of Men.

NO NAMES USED WITHOUT WRITTEN CONSENT. PRIVATE. No names on boxes or envelopes. Everything Confidential. Question List and Cost of Treatment FREE FOR HOME TREATMENT.

Write for our private address.

## The Employer who Nags Loses Money

It is the testimony of married men that a wife with a fiery and uncertain temper is a far more agreeable life companion than a "nagger." The same sort of nagging that results in a good many shipwrecks on the matrimonial sea has run many a business upon the rocks. The employee doesn't live who wouldn't prefer a good blowing up now and then to constant faultfinding and scolding. We don't mind a good, dashing thundershower now and then, by way of variety but two weeks of constant drizzle superinduces suicidal mania. More than this, such constant irritation stirs up all the dormant microbes of dissension that may be hanging around. A mole on the neck is a very simple thing, but it may result in a carbuncle if you worry it. If you don't like the looks of it, get a surgeon to cut it out; but don't keep scratching it.

## A Punishment for Reckless Driving

A very heavy percentage of the automobile accidents is caused by recklessness inspired by a selfish disregard for the rights of others or by a foolish lust for the exhilaration of undue speed. It is the human factor that must be reckoned with. The problem is how to effectually curb the recklessness of the comparatively few for the benefit of many. It does not seem that the authorities are making intelligent and energetic efforts in this direction. Arrests for more or less technical offenses are not uncommon, but the reckless driver who sends his car at tremendous speed along the roadways is not often hauled into court. When he is brought before a judge, a fine usually ends the affair. Courts have a natural hesitancy to send motor car drivers to the workhouse along with vagrants. A punishment to fit the crime is needed. Could it not be found in the suspension of the offender's privilege of driving a car, or even its revocation in extreme cases? A man who shows complete disregard of the rights and safety of others ought not to enjoy the privilege of handling the steering wheel of a car. Some such punishment, together with greater activity on the part of the authorities, would work great good.

## Artificial Rubber

It is again announced that science has found a way to make rubber. This time the discovery is vouched by the highest scientific authority in England. The product, which it is said is of superior quality, may be profitably made at sixty cents a pound, and perhaps at twenty-five. If these claims are justified by experience, the effect on the commerce of the world will be enormous. Rubber gathering in the tropics will cease. The annual porduction is now about 90,000 tons, worth at the points of shipment two hundred million dollars, and paid for by that amount of goods shipped mostly from the factories of Europe. The sudden arrest of a trade of such magnitude cannot fail to have serious effects on the finances of the world and upon the unfortunate creatures who gather rubber in the tropical jungles, with infinite toil and suffering, the effect cannot but be serious. Commerce will disappear from the Amazon, and perhaps from the Congo, and if the banana disease continues its ravages the whole Spanish Main, outside of the canal zone, will relapse again into the state in which Columbus found it four hundred years ago. It has been the dream of science that, as malaria and yellow fever were conquered, humanity would advance upon the tropics where the infinite production of hydro-carbons, that is, sugars, starches and oil would provide food and replace the exhausted coal measures of the temperate zone. Before such a dream can be realized American science must avert the terrible hurricanes which in a few hours destroy over great areas the efforts of a generation.

## Red Raspberries Repay Raising

Where red raspberries yield 2,000 quarts per acre, as they do on the farm of Mr. B. H. Lee, near Berwick, N. S. there is undoubtedly profit in the crop as prices have been during the past few years. Mr. Lee recently disposed of a 3,000 quart crop grown on an acre and a half, for ten cents net. As berry growing has only been a side line with him, he has not given close attention to the cost of production, but he states that about three cents should pay for picking and marketing. Mr. Lea has never done any heavy fertilizing, preferring to follow the rule of commercial fertilizers one year and stable manure the next, each applied lightly. A red raspberry patch is good for eight or ten years, possibly longer, and the constant cultivation takes out the humus, hence the necessity for replenishing the soil with plant food. In preparing the ground for planting he aims to have it in as good condition as for grain or potatoes. The rows should be placed far enough apart to allow a one horse harrow to go through, and the plants set as close in the rows as possible. The closeness of planting is largely decided by the cost of the plants. The more plants set the sooner you get a full crop. When hoeing time comes, which should be quite often in dry weather, a very small handful of nitrate of soda worked into the soil around each plant, about twice in the season is sufficient for the first year. Mr. Lee prefers to plant them before the growth starts in the spring, but says that no doubt fall planting would be equally satisfactory. If the land is in good condition, and the rows are far enough apart in the row, some crop, like potatoes or beans, may be grown in the row. If the rows are five or six feet apart, a row of such vegetables may be grown between the raspberry rows Mr. Lee does not advise planting them in a young orchard unless the ground is moist and well fertilized. The weeds and grass should not be allowed to get a hold at all. The rows should be kept level, and between the rows cultivated lightly but thoroughly, as the feeding roots are quite near the surface. Bone meal and stable manure are good fertilizers, and about 300 pounds of nitrate of soda applied when the berries are nicely set will give them a great lift. Any fertilizers which are good for orchards are good for raspberries. However, Mr. Lee considers the nitrate of soda very important With this careful treatment he says that in the second year you will get a few berries, and about the third or fourth year, owing to the growth and increase in the number of canes, a full crop may be expected.

**If half a teaspoonful of baking powder is added to the milk used in preparing mashed potatoes it will make them fluffy and light.**

## Fight Against Consumption

According to statistics complied by the Provincial Registrar-General some progress is being made in the fight against tuberculosis. In 1911 there were 2,353 deaths from tuberculosis in Ontario, which is in the ratio of 93 per 100,000 of population. The total number of deaths for the same period was 34,235, making the contributary cause of death in 6 per cent, of the total. This is the lowest ratio in thirty years with the exception of 1910, where there were 2,291 deaths from this disease. Thirty years ago the number of deaths from consumption was 2,446, which was in the ratio of 129 per 100,000 of population and about 10 per cent, of the total number of deaths for the year

## He Didn't Advertise

A merchant went home to supper one night and a new silver percolator was on the table, He asked his wife where she got it and she said: "Why, dear, I selected it out of Smith's catalogue and it only cost me $4.25 and express." Of course the husband was mad in a moment, and said; "Why in the deuce didn't you tell me you wanted the thing? I have lots of them in my store and they only cost me $3.00." Then the wife handed him one like this: "Well, John, if you would advertise once in a while so the people would know you were still in business, maybe they wouldn't send away for such stuff," and there are some not many miles away who could profit by taking to heart the incident quoted.

## The Cat's Useful Whiskers

We are apt to think that the cat's ability to see in the dark is due entirely to its eyes, but competent authority assures us that the feline's power in this respect is due almost as much to its "whiskers." These delicate hairs that project from the muzzle of the cat family are wonderful mechanisms. Each one grows from a follicle, or gland, nerved to the utmost sensibility. Its slightest contact with any obstacle is instantly felt by the animal, though the hair itself may be tough and insensible. The exaggerated whiskers on the muzzle often project to such a distance that from tip to tip they indicate the exact width of the body of the beast. Consider the lion stealing through the jungle at night in search of prey, when the least stir of a twig gives alarm. The lion's whiskers indicate, through the nicest nerves, any object that may be in his path. A touch stops him short before pushing through some close thicket where the rustling leaves would betray his presence. Wherever his head may pass without a warning from the vibrissae there his body may pass noiselessly. It is the aid given him by his whiskers, in conjunction with the soft cushions of his feet, that enables him to proceed as silently as the snake.

## The Woman That is too Friendly

She always is running in just for a few minutes' chat. Probably she comes in just when you are putting forth every effort to finish an important pieces of work. She says, "Don't let me interrupt you. Just go right on with your work. I only ran in for a few minutes" She does not stop to consider that it is impossible for you to concentrate your mind on your work when conscious of the fact that she is making a mental inventory of every thing in the room. If she happens to come in just as you are dressed for the street, she immediately offers to accompany you. Perhaps you are expecting to meet a friend and have a social time together. You have a number of things to say to this friend that you do not care to say in the presence of a third party. She is next of kin to the woman who always is asking favors. If you ar going to the city for a day she immediatey says, "Oh, would you mind getting this for me?" Perhaps her errand takes you entirely out of your way, and. as your time is limited, must neglect one of your own errands in order to perform hers—often of little importance. This same woman probably is one of the inveterate borrowers. She borrows your groceries, your thread, your clothing, your chairs, your bed and table linen, everything, in fact, except your husband, she might borrow even him if he did not have stamina enough to refuse to be borrowed. Next to her is the woman who imitates. If you get an especially becoming dress, she immediately has one made so similar that when you meet some of your mutual acquaintances they say, "Why you have a dress just like Mrs. B——'s." It is not only your clothes she borrows, or imitates, but your style of speech, your ideas, your expressions. In fact this social pirate coolly will appropriate anything she happens to admire. As your ideas have not been copyrighted, you have no recourse.—Dr.

"I was cured of diarrhoea by one dose of Chamberlain's Colic. Cholera and Diarrhoea Remedy," writes M. E. Gebhardt, Oriole, Pa. There is nothing better For sale by All Dealers.

# Pandora Range

The "Pandora" Range is doubly guaranteed — it is guaranteed by the makers and just as fearlessly guaranteed by every McClary agent. You should know "Pandora" 111 perfections before you buy a range.

## The Western Fair

From indications at the present time it would appear as though this old and reliable Exhibition would be more popular than ever this year. The management are doing everything possible to make the Exhibition not only attractive to exhibitors and visitors, but satisfactory as well. They wish to combine education and instruction as well as amusement along the different phases of the Exhibition proposition. There will be established on the grounds this year an up-to-date milking machine plant in actual operation. Every farmer in the country should avail himself of the opportunity of seeing this machine. In this day of scarity of help this means a great deal. Come and see the cows milked by electricity. There will also be established on the grounds an educational feature, a plant showing the latest sanitary methods of caring for and cooling milk. These are only a few of the many features which will make the Exhibition very attractive this year. The amusement part of the Exhibition has been well looked after. There will be a splendid program of attractions twice daily before the Grand Stand. The management have secured at great expense The Besses o' the Barn Band of Cheltenham, England, one of the finest brass bands in the world. You cannot afford to miss hearing them. The Midway will be filled with good clean shows. Special rates over all the railroads commencing September 6th. Low rates for exhibitors. Write the Secretary, A. M. Hunt, London, Ont., for all information. The dates are Sept. 6th to 14th.

A vast amount of ill health is due to impaired indigestion. When the stomach fails to perform its functions properly the whole system becomes deranged. A few doses of Chamberlain's Tablets is all you need. They will strengthen your digestion, invigorate your liver, and regulate your bowels, entirely doing away with that miserable feeling due to faulty digestion. Try it. Many others have been permanently cured—why not you? For sale by all dealers.

**A cat may have nine lives, but a cow can kick the bucket a dozen times and continue to hold her job.**

CANADIAN PACIFIC RAILWAY

# 50,000 FARM LABORERS WANTED

FOR HARVESTING IN WESTERN CANADA

| "GOING TRIP WEST." | "RETURN TRIP EAST." |
|---|---|
| $10.00 TO WINNIPEG | $18.00 FROM WINNIPEG |
| Plus half cent per mile from Winnipeg up to MacLeod, Calgary, or Edmonton. | Plus half cent per mile from all points east of MacLeod, Calgary or Edmonton to Winnipeg |

GOING DATES

AUGUST 20th—From all stations on all lines on and South of the Grand Trunk Main Line, Toronto to Sarnia, including all stations on the C.P.R. Toronto to Windsor (inclusive) and Branch Lines including Guelph sub-division from Guelph South and from Brampton South.

AUGUST 23rd—From Toronto, and all stations north of, but not including the Grand Trunk Main Line, Toronto to Sarnia, and from Toronto east to, but not including Kingston, Sharbot Lake and Renfrew; and C.P.R. Lines west of Renfrew.

AUGUST 28th—From all stations in Ontario, Toronto and East, Orillia and Scotia Junction and east; also east of North Bay, and Eastern Ontario.

AUGUST 30th—From Toronto and all stations west, in Ontario; North Bay and west, including C.P.R. stations, Sudbury to Sault Ste. Marie, Ontario.

ONE-WAY SECOND-CLASS TICKETS WILL BE SOLD TO WINNIPEG ONLY

One-way second class tickets to Winnipeg only will be sold. Each ticket will include a verification certificate, with an extension coupon. When extension coupon has been signed at Winnipeg by a farmer, showing he has engaged the holder to work as a farm laborer, the coupon will be honored up to September 30th for ticket at rate of one-half cent per mile (minimum fifty cents) to any station west of Winnipeg on the Canadian Pacific, Canadian Northern or Grand Trunk Pacific Railways in Manitoba, Saskatchewan or Alberta, but not west of Edmonton, Calgary or McLeod, Alta.

A certificate will be issued entitling purchaser to a second-class ticket good to return from any station on the Canadian Pacific, Canadian Northern, or Grand Trunk Pacific Railways in Alberta, Saskatchewan and Manitoba east of MacLeod, Calgary and Edmonton, to original starting point by the same route as travelled on going journey on or before November 30th, 1912, on payment of one half cent per mile (minimum fifty cents) up to Winnipeg added to $18.00 from Winnipeg, provided the holder deposits the certificate with the ticket agent on arrival at destination, and works at least thirty days at harvesting.

For full particulars see nearest C.P.R. Agent, or write—

M. G. MURPHY, D.P.A., C.P.R., Toronto

## Gave Birth To 28 Children

Mrs. Philip H. Webster (colored) of 1127 Fairfield avenue, Niagara Falls, N Y., believes she holds the record for bearing children. In fact she feels quite certain of it, for last week she gave birth to her twenty-eigth child, a healthy boy, weighing eight pounds. Mrs. Webster is 44 years old and her husband is 46. She was married when she was 16 years old, and a year later gave birth to twins, one of which is still living. Two sets of triplets and two more pairs of twins help to bring the number up. Of the twenty-eight only eight are living.

## A Sad Fatality

One of the saddest occurrences that have taken place in Brant County in many a day happened Friday, Aug. 16th., on the Mt. Pleasant Road. Mr. Addison P. Fairchild was hauling grain on the farm his mother, Mrs. Frank Fairchild, and his wife. for her own pleasure, was handling the reins to assist in unloading, when the tug of the harness broke, flying back and striking her in the chest just below the heart. She was knocked from her seat and was carried in an unconscious condition to the house. Just before her friends and medical aid could be summoned, she passed away. What renders the occurence doubly sad is contained in the fact that Mrs. Fairchild was only married a brief two weeks. On Wednesday, July 31st. her marriage took place at the residence of her brother Mr. John N. Laurie, Bowmanville, and she and her husband had just returned from their honeymoon trip to Eastern cities. Mrs. Fairchild before her marriage had taught school in Mt. Pleasant and had greatly endeared herself to the children under her charge, and the whole community. To the grief stricken young husband and other relatives, th sympathy of many friends will be extended in the great calamity that has befallen them.

## The Hessian Fly and How To Save Wheat

Many of the farmers of Ontario are not aware that the Hessian Fly has been attacking their wheat and causing much destruction. They have noticed numerous broken-down straws in the field when cutting the grain but have attributed them to other causes than the real one. In some fields this year 50 per cent. of the crop has been destroyed by this, the worst enemy of wheat. Some of those who have suffered severely the last few years are thinking of dropping winter wheat out of their rotation until the Hessian Fly ceases to be a menace. The life history of the insect and the best methods of control will therefore be be of interest to farmers.

LIFE HISTORY—The adult Fly resembles closely a mosquito but it is a little smaller and darker It is seldom noticed in this stage, but has three other stages, viz., egg maggot, and pupal or flaxseed stages. At the date of writing, August 9th, the insect is in the pupal stage in the wheat fields. These pupae look very like flaxseeds and are to be found in the wheat stems near the ground. Remove the blade from the stem above the first or second joint near the ground and these reddish brown pupae will be seen. Sometimes as many as twenty are clustered together on a single badly attacked stem. In a few weeks these pupae will change into the black mosquito like adult, In fact some have already done so in my rearing cages. These flies live a few days and lay their eggs on the wheat plants that spring up in the stubble fields or in early sown fields. Soon little legless maggots hatch from the eggs and feed on the young plants at the crown, frequently doing much damage and causing the wheat fields to look a sickly yellow color late in fall. Before winter most of the maggots are full grown and have changed to the flaxseed stage. Next spring, about June, these transform into the adult flies. These now lay their eggs on the lower wheat leaves and the maggots on hatching work usually just above either the first or second joint between the leaf and the stem, causing the latter to become weak and bend over or not infrequently to break off. The feeding of the maggots deprives the head of its proper supply of food and thus injures the grain; in some cases a plant is so badly attacked that it is unable to head out at all.

MEANS OF CONTROL—The best means of control is to prepare the seed bed with extra care so that it is in excellent shape when sown; to select good, large, unsprouted, plump seed, (small grains can be removed by the fanning mill); and not to sow any wheat before the 5th of September. In the warmer parts of the Province the 10th or 15th would be preferable. If the seed-bed is in proper condition this late sown grain should grow rapidly and produce good vigorous plants before winter. The better it grows, the less injury it is likely to receive from the fly. The object of late sowing is to wait until the flies have laid their eggs elsewhere or died before the new crop appears above the ground. Ploughing down or burning over wheat stubble as soon as grain has been in, or on the other hand running a disc oricultivator over the field to start the wheat growing and induce the flies to lay their eggs on these plants and then ploughing them all down in September to destroy the eggs or maggots; or sowing a strip or two of wheat in August in the field intended for wheat this year and letting this grow up for the flies to lay eggs in and then ploughing it under just before seeding the whole field—are each helpful methods of control wherever they can be applied, but the main remedies are those first mentioned. Late sowing is likely to be very effective this year because the showers we are getting in August will hasten the appearance of the flies more than dry weather would, and therefore they are likely to lay their eggs considerably earlier. Several kinds of parasites are attacking the maggots and pupae of the Hespian Fly, Some have already immerged in my rearing cages but it is not safe to depend upon them to keep it under control.

L. CAESAR,
Department of Entomology,
O. A. C., Guelph.

**A Scottish lady, who was spending her holidays in London, entered a bric-a-brac shop in search of something odd to take home to Scotland with her. After she had inspected several articles but had found none to suit her, she noticed a quaint figure, the head and shoulders of which appeared above the counter. What is that Japanese idol over there worth?" she inquired of the salesman. The salesman's reply was given in a subdued tone. "Worth about half-a million, madam. That's the proprietor!"**
