RHEUMATISM

This is just the season when Rheumatism with its grinding pain and stiffening of joints gets hold of you. Fight it with

Templeton's Rheumatic Capsules

Templeton's Rheumatic Capsules bring certain relief, and permanent results. They are recommended by doctors, and sold by reliable druggists everywhere for $1.04 a box, or write to Templetons, 142 King St. W., Toronto. Mailed anywhere on receipt of price. 65

SUNDAY SCHOOL LESSON

Lesson X. March 7, 1920.

John Writes About Christian Love.

I. John 4: 7-21.

Commentary.—I. Exhortation to love (v. 7-11). 7. Beloved—We seem almost to see the aged apostle, as in the ripeness of Christian love he speaks to a company of saints or writes to all the churches, addressing them with this endearing term. His heart is in what he says. Let us love one another—One who loves God supremely and with all the heart loves his fellow men. Here is an exhortation to allow nothing to interfere with the love that Christians have for one another and to cherish and cultivate that love. Love is of God—God is the source of love, and only as we receive love from him can we truly "love one another." Every one that loveth is born of God—The fact that one has true Christian love is evidence that he is a child of God, is born of the Spirit. Knoweth God—He not only knows something about God, but knows him. 8. Loveth not knoweth not God—A statement negatively of what is put in the affirmative form in the preceding verse, and emphasises the truth set forth. For God is love—Love is the essence of the divine nature. His heart of love goes out to every creature he has made. One cannot know God from becoming acquainted with him through the new birth without loving him and his fellow men. 9. Was manifested the love of God toward us—A profession of love without any manifestation of it is an empty claim. God is love and has given a manifestation of that love to the world. The extent of God's love is measureless.

10. Herein is love—Love in its essence, love in its highest possible measure, is here manifested. Not that we loved God—It was in no sense man's love to God that led the Father to send his Son into the world. But that he loved us—The love was all on one side. He loved us because of the fact that man was the creature of his hand and because of what man could become through the plan of redemption. To be the propitiation for our sins—To be the atoning sacrifice for our sins; to satisfy divine justice. Jesus bore on the cross the penalty for our transgressions, so that we, by trusting in him and resting upon the atonement that he made, might be free from sin and the punishment connected therewith. 11. If God so loved us—The measure of his love is what he did for us in giving his Son to die for us. We ought also to love one another—Tis in a fitting conclusion to the argument by which the apostle drives home the exhortation given in v. 7. Since God loved us with an infinite love and manifested that love for our present and eternal well-being, we ought to love one another.

II. Dwelling in God and He in us (vs. 12-16). 12. No man hath seen God at any time. God is a Spirit. He is invisible, yet He exists, infinite in wisdom, power and love, and we are to love Him; and we are to love our fellow men who are to be the visible recipients of our love. God dwelleth in us—Love one to another is a natural consequence of God's dwelling in us. One who is born again becomes a temple of the Lord. God comes in to set up His kingdom and make His abode. He has possession of the faculties of the being. He dwells there as a beloved and welcome guest. Perfected in us—See note on v. 17. 13. Hereby know we—God's plan for us includes a positiveness of knowledge as to our acceptance with him. That we dwell in Him—The indwelling is mutual. Not only does God dwell in us, but we also dwell in Him. Because He has given us of His spirit—The change that comes to us when we are born again is evidence that God has come to dwell in us; yet the greater evidence is brought to our hearts by the Holy Spirit who bears witness to us that we are born of God. 14. We have seen and do testify—John had been closely associated with Jesus during the years of his public ministry and was prepared to bear testimony as to his mission on the earth. To be the Saviour of the world—In the atonement He made, Jesus provided salvation for the world, and whosoever will may be saved through Him. 15. Whosoever shall confess that Jesus is the Son of God—Much stress is laid on this confession; because the false teachers denied the reality of the incarnation; but this confession implied also such a belief in Christ as put them in possession of His pardoning mercy and indwelling Spirit.—Clarke. This confession involved both the truth that Jesus was the Son of God and the application of that truth to one's personal need. God dwelleth in him and he in God—The faith just mentioned appropriated personally the benefits of the atonement. 16. We have known and believed—John repeats and emphasizes the certainty of knowledge and faith in respect to Christ's nature and mission.

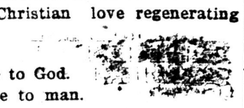
III. Love perfected (vs. 17-21). 17. Herein is our love made perfect—When we fully dwell in God and He in us, our love is perfected in us. Everything out of harmony with God is taken out of the heart and his love fills the entire place. "Thus the love is made perfect. When it thus fills the heart, it has all the degrees; it is all in all; and all in every power, passion and faculty of the soul." This is Christian perfection. It is the pure love of God filling the soul to the exclusion of every evil thing. Boldness in the day of judgment—He whose sins are all forgotten and whose heart is cleansed and filled or stand boldly before the Judge and plead the love and mercy of Jesus. As he is, so are we—As he is pure and righteous and holy, so are we through faith in Christ and the atonement he made for us. 18. There is no fear in love—He who dwells in love and dwells in God, and God in him, has the Judge in closest sympathy and fellowship with him, and hence can have no fear. Perfect love casteth out fear—The apostle is speaking particularly about the judgment. The heart that is filled with divinely-imparted love has no place for fear. Fear of future ill is also cast out. Fear hath torment—Fear is always distrusting. It has led to sickness, insanity or death. God has provided for his people relief from tormenting fear. He that fareth is not made perfect in love—The apostle here states the test of our relation to God. If fear remains, it is evidence of a lack of love.

19. We love him, because he first loved us—In the most ancient manuscripts "him" is omitted, so also is the Revised Version. It is because he first loved us and sent His Son for our redemption that we can love God and our fellow men in a proper sense. God furnished an example of unselfish love, gave us the ability to love and inspired love in our hearts. He hateth his brother—One who truly loves God can not hate any fellow mortal. A liar—He who professes to love God and at the same time hates his brother, does not tell the truth and intends to deceive. How can he love God—Hatred in the heart renders one incapable of loving God. 21. This commandment—See Deut. 6; 5; Lev. 19; 18; Matt. 19; 19; Matt. 22; 37-40. "Love is the fulfilling of the law" (Rom. 13; 10).

QUESTIONS—Who was the writer of the Epistle from which the present lesson is taken? What other books did he write? What epithets are applied to him? What exhortation does he give in this lesson? How did God manifest his love toward the world? What is the dwelling-place of the Christian? How is our love made perfect? From what does perfect love free us? What commandment have we in the last verse?

PRACTICAL SURVEY.

Topic—Christian love regenerating society.



I. Love.

II. Love to God.

III. Love to man.

John the apostle occupies a peculiar and prominent place among the twelve disciples and New Testament authors. Bethsaida in his traditional birthplace. His family though fishermen, appears to have been possessed of some means and of better connections than some of the other disciples (John 18:15). He was probably a disciple of the Baptist before being called by Christ and sustained the most intimate relations with the Master of all of the apostolic group. He is described as that "disciple" whom Jesus loved. During the tragedies of Gethsemane, the judgment hall and Calvary he displayed greater loyalty than any of the others; and from the cross he received the commission of carrying for the widowed mother of the Saviour. He has been called the "apostle of love" because love is the controlling conception in his system

1. Love. Love is the strongest impulse of which human nature is capable What men will not do or endure from fear of punishment or hope of reward, they will do and endure from love. The objects of affection are clear indications of moral state. Ruskin tells us that in the last analysis "morals are matters of taste." The objects of affection exert a potent transforming influenze of character. Unconsciously, but infallibly, they conform us to themselves. Love is the most unselfish and transforming impulse. It "seeketh not her own," but always the honor or happiness of its object. The spirit and teaching of the lesson are post-pentecostal. John could not have written this message before the refining energies of the Holy Ghost had swept through his soul (Mark 10: 35-37; Luke 9: 51-54).

II. Love to God. To love God is at once the highest obligation and enjoyment of the creature. "Thou shalt love the Lord thy God," is the first, supreme and all-comprehensive requirement of the law. True affection is founded in esteem and can not long survive it. God's disclosure of the excellence of his being and character challenges the admiration of his creatures as it should awaken their adoration. His beneficence challenges the admiration of his creatures as it should awaken their adoration. His beneficence challenges their gratitude and should elicit their affection. God exalts men by the power of a purified affection. Our affectional nature is the stronghold of Christian experience. Only the service which springs from love is acceptable. The service of love may be wearying, but it is never hard. The value of service is not judged by its measure, but by its motive. "A cup of cold water" may bring a disciple's reward. Love always gives its best, and glorifies the commonplace.

III Love to man. Inseparable from the first command is the second, which fixes the standard of sentiment and service toward one's fellows The law itself is founded in love (1 Tim. 1: 5). Love to God is impossible without begetting love to man (1 John 4: 20, 21). Even enmity and injury do not exempt from the obligation "Love your enemies." "Thou shalt love thy neighbour as thyself." Christian love is the force which must regenerate social, industrial and political conditions. Apart from it society becomes chaos. It has been proved that a Christless civilization cannot endure. W. H. C.

The Cause of Heart Trouble

Faulty digestion causes the generation of gases in the stomach which inflate and press down on the heart and interfere with its regular action, causing faintness and pain. 15 to 30 drops of Mother Seigel's Curative Syrup after meals sets digestion right, which allows the heart to beat full and regular. 9

Seines to Capture Sharks.

Faced with an alarming scarcity of hides, the world for some time has turned to the sea for a supply, with the result that a new industry is developing at various points on our coasts. Recently immense seines have been devised and used for the capture of sharks and other fish whose skins can be converted into leather. One of the nets that has proved very successful in this unusual fishing is 600 feet long and 18 feet deep, with a 4-inch mesh of heavy twine. It is operated from small boats, and as many as 200 sharks have been taken with it in a single day.

Experiments conducted under Government supervision have disclosed the fact that tanned shark skins are suitable for shoe uppers and other articles. Five hundred fish skins are treated weekly at one tannery devoted to the production of marine leather, and plans have been made for greatly increasing this output during the next year. Each hide contains from 10 to 40 square feet of exceptionally strong leather, and is sold at a price depending upon the quality. Valuable by-products are obtained from the flayed bodies of the fish, including fertilizer, glue, oil, and musical strings. The skins of certain wales, porpoises rays and devilfish also can be utilized. Formerly these inhabitants of the sea were regarded as worthless. Now they are expected to become important factors in the leather market.—Popular Mechanics.

FARM AND GARDEN

BUYING BEES IN COMBLESS PACKAGES.

(Experimental Farms Note)

During the past few years a popular way to make good the winter losses of bees, and even to make a start in beekeeping, has been to purchase a pound or two of bees with a queen in spring shipped from a specialist in the southern States by express, and more recently by parcel post also.

From experimental shipments received at the Central Experimental Farm, Ottawa, during the past four years, and from enquiries amongst beekeepers in other places who have received them, it can be said that this method of obtaining bees should be followed with caution.

At Ottawa, the best results were obtained in 1917, when three two-pound lots with young fertile queens arrived by express in good condition from an experienced shipper in Alabama, after having been seven days on the journey, on May 9, a week before the honey-flow from dandelion commenced. These bees, on arrival, were given combs containing a little old honey. The spring having been favorable for breeding, they quickly developed into strong colonies, and each gave about as much honey as the average wintered colony.

But later experiments and investigations have shown that it is far too much to expect such good results every year, and that several accidents are likely to happen that may make this method of acquiring bees anything but profitable.

In the first place, bees are very perishable. Several shipments by express in April and May, 1918, from the above mentioned dealer, arrived nearly all dead eleven days after despatch, but another shipment received by parcel post on April 28, 1919, arrived in good condition only four days after despatch. Heavy losses both by express and parcel post have occasionally been reported.

Moreover, the journey often injures the queens, so that they are liable to do poor work, or to die soon after arrival. This misfortune was mainly instrumental in spoiling the results in 1919, from six lots received in good condition by parcel post from the same breeder. They together produced only 282 pounds of honey, while each wintered colony gave 187 pounds, two of the queens having died a day or two after arrival, and two more having been superseded a week or two later. A short breeding season before the honey flow contributed to these poor results.

The sender, owing to a rush of orders or unexpected unfavorable weather, may be unable to supply the bees until the summer, after the season has gone, and one or two instances have occurred of bee diseases having been introduced by bees from the south. However, postal regulations are now in force in both countries forbidding the bees sent by parcel post to be accompanied by combs, which will help to remove the risk of the transmission of foul-brood.

So great has been the demand for these southern bees in recent springs, that inexperienced dealers have arisen who have shipped them in boxes unsuitably constructed and provisioned, and sometimes with too many bees in the box, resulting in heavy loss. A few unprincipled dealers have also appeared who have sent old bees or too large a proportion of drome bees, or virgin instead of fertile queens. One may expect, however, that as the trade in these southern bees become more stabilized, and after the transportation employees become accustomed to recognize the very perishable nature of this merchandise, the losses will be less frequent.

On the whole, we would advise beginners to buy bees locally in preference to getting them early from the south, particularly because in the latter case, combs and expert care are needed. We also think that, at the present high price of bees and unfavorable rate of exchange with the United States, those who have bees will pay better to make from their own bees by breeding queens and prepare them with extra good care for the winter than to depend on purchasing bees from the south in spring. Those who wish to try the experiment of buying bees from the south for the first time, could protect themselves by ordering only a few packages and noting in what condition they arrive before ordering more. It is advisable also to order from reliable dealers some weeks or months before the bees are wanted.

There is no customs duty on bees entering Canada, but an entry for customs returns, which usually causes little or no delay, is required.

Most of the objections to procuring combless packages of bees from the south in early spring are overcome by getting them from the warmer parts of Canada later on in the season. Several Canadian firms are now supplying these and beginners can make a fair start by obtaining one or two of these lots in June or early July, without having to buy combs.—F. W. L. Sladen, Apiarist.

NOTES.

Corn silage added to a corn and alfalfa ration has proved a profitable way of fattening lambs at the Nebraska Experimental Station.

Standing water should never be allowed to remain where sheep and cattle can get free access to it, as it always has some kind of disease-breeding germs in it, which results in the loss of stock occasionally.

The world war taught the lesson that the man behind the plow was just as important a factor in winning the war as the man behind the gun.

Although the first few moments of the heifer's life is the most critical period of her esistence, still many heifers are stunted, due to lack of attention after being weaned.

Jersey or Guernsey heifers mature more rapidly than Holsteins, or Ayrshires and hence are ready for breeding at an earlier year. The approved practice is to breed a Jersey at from 13 to 17 months old; a Holstein from 17 to 21 months of age.

Every farmer should have enough confidence in his soil and enough faith in his own efforts in tilling the soil to believe he will be justified in using manure, fertilizer, cover crops and other means of improving soil. Those who hesitate to improve poor soil and farming may never be what it should.

French farmers seed and re-seed their pastures, sput out the weeds and even fertilize the pasture lands. Their pastures improve with age, as they never over-pasture. In this country we pay very little attention to pastures except to see that it has twice as much stock on it as it will support.

SHOCKED U. S. SENATORS.

(Ottawa Journal.)

Hon. N. W. Rowell's reminder that Canada had definite status in the League of Nations which she would not forego probably came as a surprise and shock so many United States senators who had no thought that their course of action had any concern to any country beside their own.

AFTER A RETAINER.

(London Weekly Telegraph).

Tramp—Is it here where you are offering a reward for a lost dog?

Householder—Yes. I'm offering ten shillings. Have you any news of my terrier?

Tramp—No, not yet. But as I was just going in search of it. I have come to ask if you will give me a little on account.

INFLUENZA HAS LATER DANGERS

Particular Care Needed When Patient is Conval scent, Says Expert.

The influenza convalescent who has apparently recovered from the disease and is yet in a strangely weak and depressed condition should be the object of particular care, according to Dr. Louis I. Harris, director of the Bureau of Preventable Diseases of the New York Health Department. In the opinion of Dr. Harris, after care of the influenza patient is most important. The co-operation of the patient, coupled with the willingness to see that the weakness and depression are a part of the illness, though coming after the disease itself has spent its force is a big factor in effecting a complete return to full health. On the other hand, the determination to ignore this debilitated condition and to fight against it, will, Dr. Harris says, frequently bring serious consequences upon the patient.

AFTER EFFECTS BAD.

"The subject of the after effects of influenza," said Dr. Harris, "is one of particular interest to the scientist at the present time.

"First, and perhaps the most momentous condition to be considered is the striking depression, mental, nervous, and physical, complained of by most patients. Those attacked by the disease with moderate severity are almost always afflicted with this depression, which should be recognized and dealt with. Those who have had mild cases of the epidemic are little affected by depression, and their quick return to health and strength gives rise to the belief that influenza is trivial. On the contrary, influenza in its after effects is anything but trivial, and calls for the application of rules of common sense and sanitation which are the fruit of years of experience.

"Tonic treatment, well chosen diet, and great care in not becoming overtired or allowing the body to be chilled are necessary. Eggs may be eaten, but not more than two a day, for the average adult. Of course, it must be remembered that in many cases this disease tends to direct its force against the kidneys, and therefore we instruct patients to avoid eating a great amount of meat, eggs, or beef extracts. Eggs, soft boiled, poached, or beaten, raw, are advisable in limited number. The raw eggs should always be well agitated before taking.

WHEN GOOD FOOD IS BAD.

"With milk and eggs as a foundation the patient should eat good nourishing food, including meat, fish, and vegetables, simply prepared. Frying, for instance, is out of the question. Good food prepared in an unassimilable manner becomes bad food; especially is this to be noted in cases of convalescence from influenza, for the disease often manifests itself in vomiting, and in intestinal and gastric disturbances, and it is important not to weaken the digestive function by the eating of poorly prepared food, or even the best of food in ill-advised quantities. The quantitative distribution of foodstuffs should be so adjusted as not to overtax the stomach, but the patient should eat generously and frequently."

As a tonic to build up the blood and stimulate the shattered nerves. Dr. Williams' Pink Pills are unsurpassed. These pills actually make new rich, red blood, which reaches every organ and every nerve in the body, improves the appetite, strengthens digestion and drives away the feeling of weariness and depression always following an attack of la grippe or influenza. Those who give Dr. Williams' Pink Pills a fair trial will be amply repaid by the new health and strength this tonic medicine always gives.

Not An Easy Job.

An official of the Indian Bureau on one of his inspection tours of the reservation Indians, was told by Quanah Parker, chief of the Comanches, that many of the tribe had more than one wife, relates Everybody's. The official at once told the chief that this condition of affairs must cease—that he must advise the offenders that the extra wives must be handed over to their parents. Shortly thereafter the official asked Parker whether this direction had been followed. "Did you tell your bucks that they must have but one wife?" he asked. "Yes, all gone," answered the chief. "Did they get rid of the extra wives?" "Yes, all gone," answered the chief. "But," urged the official, who had himself gathered data upon the matter, "I understand that you yourself have six wives!" Yes, me got six." That won't do, Parker. Send them to their parents. Tell them to go." You tell 'em," responded Parker.

FROM DIRE POVERTY.

"I hear that Bullkon has struck it rich?"

"His name is Bridge."

"Good gracious! Is she carrying the craze as far as that?"

This Soldier Knows What Helped Him

DODD'S KIDNEY PILLS CLEANED OUT HIS RHEUMATISM.

He Found in the Old Canadian Remedy Relief That the Hospitals of Egypt Could Not Give.

Cape St. George, Nfld., March 1st.—(Special.)—Eugene Cornect, keeper of the light and fog alarm here and who was overseas with the Newfoundland forces, is a firm believer in Dodd's Kidney Pills as a help for kidney disease and rheumatism.

"For two years I suffered from kidney disease and rheumatism," Mr. Cornect states. "I was treated for them in the hospitals in Egypt. But it was five boxes of Dodd's Kidney Pills that cured me."

Dodd's Kidney Pills are purely a kidney remedy. By putting the kidneys in shape to strain all the impurities out of the blood they remove the uric acid, the cause of rheumatism. With the kidneys cleansing the blood there can be no uric acid to crystallize in the muscles and cause those excruciating pains known as rheumatism. Ask your neighbors about Dodd's Kidney Pills.
