The exterior, a thick, fleshy husk, dries up and cracks, disclosing the nut-The outer covering of this nut is what we know as mace. It is red at first, but turns to a light brown when dried. Next comes a hard, shining shell, and inside that is the nutmeg. The tree bears about the eighth or ninth year from the seed. The mace is taken off and dried in the sun for one day, and for eight days in the shade, then dampened with sea water and pressed in bags. The remainder of the nut is very thoroughly dried, when the shell is broken and the nutmegs assorted, the best ones being exported. They are first pickled in lime-water, then left to sweat, and finally packed for shipment. The Penang nutmegs, the best, are about an inch long, pale brown, corrugated on the surface, with red streaks in the gray interior. London Standard.
