KINGSTON DRY DOCK.

Corner Stone Laid by Sir John Macdonald...
The corner stone of the Kingston dry dock...
The following is a description of the dock...
The dock proper, which is quarried out of solid rock, is 200 feet...
long, 37 feet on the floor, 30 feet wide on...
the top, 48 feet wide at the opening and 48...
feet deep. The quarrying is nearly com-...
pleted, there not being more than 1,000...
cubic yards to remove. The contractors...
are N. K. and M. Conley, who built the...
docks at Quebec and Vancouver. The first...
sod was turned on the 9th of May, 1889, and...
at once the construction of the cofferdam...
began to keep back the water, was begun...
It required 800,000 cubic yards of material...
the greater part of which was moved by the...
company's dredge St. Joseph. The dam...
is built out to the water 35 feet deep...
The sides of the dock will be built up...
like stairs so as to form the steps of a...
boat's hull and afford rests for beams to...
keep vessels firm after the water is pumped...
out. Mr. Conley was compelled to go to...
Belleville, where 150 men were kept busy...
since October last arranging and cutting...
stone. All the stone is now ready and a...
large consignment is on hand for early...
operations. Had he been able to get the...
required material here it would have meant...
to him a saving of \$10,000. One hundred...
men are at work here. The gate to the...
dock will be peculiar. It will be a large...
iron box, which will slide across the front...
of the cavity and into a niche on the op-...
posite side. The weight of the water on the...
lake side will press it so tightly against the...
padding that leakage will be prevented. It...
forms a water tight compartment. The...
reason that the gate is a box is this: If...
anything goes wrong with the side next the...
dock it can be repaired, while the other...
side keeps out the water. Then, again...
when it recedes it goes into a large cavity...
which is a little dock in itself, and...
permits of being pumped out, so that...
the gate can be overhauled. The con-...
trivance is a good one, and is said to work...
admirably. The "first stone," which will...
always be visible, is 83x33 feet. It weighs...
over six tons, and was cut by Edward...
Doherty, of Belleville. All the stones in...
the mason work are the same size. There...
will be six drains beneath the floor of the...
dock. The floor will be made of eighteen...
inches of cement and then three feet of...
stone. At the entrance there will be a...
rudderwell, the first of the kind built...
where boats can ship their rudders. This...
is an invention of Mr. Perley, Chief Engi-...
neer of the Public Works Department...
Running about one hundred yards from...
each side of the dock will be a wharf, con-...
sisting of several vessels can be handled, let...
the weather be as boisterous as it will. Mr...
James Wilson is clerk of the works, and he...
says that ever since Mr. Conley began work...
he evinced a disposition to do it thoroughly...
and well. The dock will take in the largest...
boat that can come through the Welland...
Canal. It will be in running order about...
October of 1891.

THE NEW LONDON CAR.

A Smart Vehicle that has Just Made Its...
Appearance in the Metropolis...
The Chicago cab is neither a thing of...
beauty nor a joy for any length of time to...
the unfortunate creatures who, by their...
necessities, are reduced to the extremity of...
riding therein. Uncomfortable in appearance...
rough and jerky in their movements, and...
subject more or less to the recklessness of...
dare-devil drivers, the Chicago hansom...
are objects of dread rather than of modern...
convenience, and the sophisticated citizen...
will submit himself even to the tender...
mercies of Baron York's fearful and won-...
derful grip in preference to adventuring in...
one of these two-wheeled rattle-traps, if the...
choice is an open one. In Lon-...
don, however, a new vehicle has...
made its welcome appearance on the...
streets, and there is much rejoicing in...
the public prints. "It has all the smart-...
ness and style of a private brougham," we...
are told, "with some novelties in the shape...
of steel tension wheels and India rubber...
tires." The hub of the wheel is made of...
gun-metal, and the spokes and rim of steel...
Although so light and fragile in appear-...
ance, this wheel will outlast two or three...
of the ordinary wood kind. The India...
rubber tire is 1 1/2 inches in thickness, and is...
secured by patent. Another feature is the...
arrangement for raising and lowering the...
"silens grip" the window is locked at any...
point, and held so firmly that there is no...
rattling. Indeed, noise is reduced to a...
minimum, and smoothness of travelling...
raised to a maximum. The coupe, like the...
hansom, only holds two persons, and in...
order to secure lightness no accommoda-...
tion is provided for luggage, beyond a por-...
tant, which can be placed on the box...
beside the driver. Ladies shopping or...
driving to evening parties find the coupe...
much more suitable than the hansom, and...
infinitely superior to the "growler."—...

What We Want.

All hail the dawn of a new day breaking...
When a strong nation shall take away...
The weary burthen from backs that are aching...
With maximum labor and minimum pay...
When no man is honored who hoards his mil-...
lions...
When no man feasts on another's toil...
And God's poor suffering, striving billions...
Shall share His riches of sun and soil...
There is gold for all in the earth's broad bosom...
There is food for all in the land's great store...
Enough is provided if rightly divided...
Let each man take what he needs—no more...
Shame on the miser with unused riches...
Who robs the toiler to swell his hoard...
Who beats down the wage of the digger of...
ditches...
And steals the bread from the poor man's...
board...
Shame on the owner of mines whose cruel...
And selfish measures have brought him...
wealth...
While the ragged wretches who dig his fuel...
Are robbed of comfort and hope and health...
Shame on the ruler who rides in his carriage...
Bought with the labor of half-paid men...
Men who are shut out of home and marriage...
And are herded like sheep in a novel pen...
Let the clarion voice of the nation wake him...
To broader vision and fairer play...
Or let the hand of a just law shake him...
Till his ill-gained dollars shall roll away...
Let no man dwell under a mountain of plunder...
Let no man suffer with want and cold...
We want right living, not mere surviving...
We want just dividing of labor and gold...

How a Charge of Shot Travels.

When standing within a few yards of the...
gun's muzzle at the time of discharge a...
person would be amazingly astonished were...
he only able to see the shot as they go...
whizzing by. Experiments in instantaneous...
photography have proved to us that the...
shot not only spread out, comet-like, as...
they fly, but they string out one behind...
the other to a much greater distance than...
they spread. Thus, with a cylinder gun, when...
the first shot of a charge reaches a target...
that is forty yards away, the last shot is...
lagging along ten yards behind. Even...
with the choke-bore gun some of the shot...
will lag behind eight yards in forty. This...
accounts for the wide swath that is mown...
in a flock of ducks on which a charge of...
shot falls just right. About 5 per cent...
of the charge of shot arrive simultane-...
ously at the target, but the balance of...
the first half of the charge is so close be-...
hind that a bird's muscles are not quick...
enough to get out of the way, although...
those who have watched sitting birds when...
shot at have often seen them start as if to...
