DRS. K. & K. TAKE ALL RISKS

Cured by the New Method Treatment

NO NAMES OR PHOTOS USED WITHOUT WRITTEN CONSENT

NERVOUS DEBILITY

Thousands of young and middle-aged men are annually swept to a premature grave through Early Indiscretions, Excesses and Blood Diseases. If you have any of the following symptoms consult us before it is too late. Are you nervous and weak, despondent and gloomy, spend before the eyes, with dark circles under them, weak back, kidneys irritable, palpitation of the heart, fearful dreams and loss of sleep, sediment in urine, pimples on the face, eyes sunken, hollow cheeks, careworn expression, poor memory, indigestion, dizziness, lack of energy and strength, tired mornings, loss of appetite, nervousness, weakness, muscular debility, premature decay, loss of hair, loss of voice, etc.

YOU WILL BE A WRECK

Our New Method Treatment can cure you and make a man of you. Under its influence the brain becomes active, the blood purified, so that all pimples, blotches and ulcers disappear, the nerves become strong as steel, so that nervousness, hesitancy and despondency vanish, the eye becomes bright, the face full and clear, energy returns to the system and the mental, physical and sexual systems are invigorated; all drains cease—no more vital waste from the system. Don't let quacks and fakirs rob you of your hard earned dollars. We will cure you or no pay.

A Great Chance for News-boys.

Free Trip to the Exhibition.

Two boys in this town who are hustlers have an opportunity to take in the great Toronto Exhibition for nothing—besides earning some additional money without much trouble, by simply selling and securing orders for the Special Exhibition Number of "Exhibition Illustrated" at 5c per copy. This beautiful paper is one of the many attractive features of this big annual Fair. It is filled with the most attractive and vivid views that can be possibly obtained of all the interesting features on the grounds. It will be filled with information of great value to the visitor which can be gotten in no other form. Every visitor to the Exhibition will want a copy. Many will want copies to send to friends abroad. The sale of this unique paper will be very easy and two of the hustling boys of this town are going to be lucky enough to secure the local agency. If you are one of them, write at once to Exhibition Illustrated, Saturday Night Building, Toronto, for full particulars.

Seemed to Give Him a New Stomach.

"I suffered intensely after eating and no medicine or treatment I tried seemed to do any good," writes H. M. Youngsters, Editor of The Sun, Lake View, Ohio. "The first few doses of Chamberlain's Stomach and Liver Tablets gave me surprising relief and the second bottle seemed to give me a new stomach and perfectly good health." For sale by all dealers.

Simple Remedy.

For Backache and Kidney Trouble
The simplest and most effective remedy for sick kidneys is Booth's Kidney Pills. If there is weakness, congestion, inflammation or soreness, Booth's Kidney Pills quickly relieve it. They gently stimulate, tone and

Booth's Kidney Pills

strengthen sick kidneys, drive away backache, rheumatic pain and dizziness, clear up and regulate the urine and restore a perfect filtering of the blood. Best of all, this relief is permanent.

All druggists sell and guarantee Booth's Kidney Pills, 50c box. Money back if they fail to relieve. Write to R. T. Booth Co. Ltd., Fort Erie, Ont., for a free trial. Sold and guaranteed in Jarvis by T. E. Morrow.

Fruit Trees

Our Nurseries are open to inspection at any time. ARTIFICIAL EYES.

The Art of Making Them Resemble Their Human Patterns.

MATCH IN SHAPE AND COLOR.

They Fit the Eye Socket Perfectly and May Even Be Worn During Sleeping Hours—Made of Glass, For Which No Substitute Has Yet Been Found.

Germany leads all other countries in the manufacture of artificial eyes. The American consul general at Oberg states that probably ever since the beginning of the world civilized people have endeavored to hide or remedy any flaw in their appearance, such as the loss of an eye would cause. How this was done by the various nations it is hard to say. Up to the present time no discoveries have been made that would offer enlightenment on this subject. There are, it is true, a few unauthenticated accounts as far back as the middle ages, but the first reliable report is given by the French surgeon Ambroise Pare in 1560.

Two kinds of artificial eyes were known to him, the ektelpharos and the hypobolapharos. The ektelpharos was made by painting the eye and all surrounding parts as far as the brows on a plate, which was placed in front of the eye socket and held in position by a string tied over the head. The hypobolapharos was used in a manner similar to that of today, being put behind the eyelid, in the eye socket itself, and was composed of a metal shell of copper, silver or gold, covered with enamel and glass fusions.

It was only at the close of the eighteenth century that these artificial eyes really became of practical use, it being then found possible to do away with the metal shell altogether and employ enamel and glass. The material used was a soft lead glass, easily shaped, but also easily destructible, and an eye had to be renewed every three or four months to prevent the socket from becoming affected.

It is known that in the middle of the nineteenth century eyes were made by enamels in Dresden, Prague, London and Stockholm, and in Thuringia. The Thuringian makers were not enamelers, but glassblowers working in connection with the porcelain painting industry, whose endless and untiring experiment resulted in the discovery of an ideal material, cryolite glass, the use of which led to a new technique in eye manufacture. Moreover, there can now be produced all the characteristics of the human eye which had been possible in enamel work. The new prosthetic eye received the name "reform eye." To be of value, however, it must be made to exactly fit the eye socket.

Today it is possible to give to the reform eye any form and color desired, and in most cases it can be even worn at night, thereby preventing the lid from sinking into the socket and the lashes from sticking together. At times attempts have been made to replace the breakable glass by vulcanite or celluloid, but such efforts have long since been given up as useless.

In 1902 the method used in France for making eyes was as follows: On the broadly pressed end of a small, colorless, transparent rod of enamel the pupil was first made, and the iris was then formed on this by means of a small, thin pointed, colored enamel rod, the designing of the iris being made possible by mating the point of this rod.

In Paris the good eyes are now so made. A glass tube, closed at one end and of the color of the sclerotic, is next blown into the form of an oval, and in the middle of this a hole is melted, the edges of which are rounded off evenly and pressed a little outward. The iris is then placed in this opening and well melted in. A thick coating of glass remains behind. The eye is rounded off, the projecting rim of the white coat is smoothed with a metal rod, and this coat is thereby joined to the sclerotic. By means of a thin, pointed red rod the blood vessels to be seen on the hard coat of the human eye are then melted in. The superfluous back part of the eyeball is melted off, thereby giving to the eye the desired form. The eye is finally placed on hot sand, where it becomes gradually cooled off.

Glass eyes are made in quite a different manner in Lauscha, the center of this industry in Germany, where their manufacture is altogether a house industry. The eyes are usually made by one member of a family, and the art is handed down from one generation to another. A gas flame is used for melting the glass. A small drop of white glass is put on the white-blown ball from which the sclerotic is to be made and is then blown so as to make a circle about eight millimeters (0.315 inch) in diameter. On this circle the structure of the iris is built by means of variously colored glass rods. A drop of black glass makes the pupil. Over the finished iris crystal glass is melted in order to imitate the cornea. The further manufacture is similar to that given in the first description.

FINANCIAL ETC.

\$20,000 to loan at reduced rates of interest either on the straight loan or on the installment principle on a greatly reduced tariff.

Agent for several first class insurance companies, and will take risks at the lowest rates. Also issues of marriage licenses. Several valuable farms for sale on easy terms.
