A man lay with his mouth open, snoring so loud that the windows rattled. His wife nudged him with her elbow and suggested: "William, you'd make less noise if you kept your mouth shut." "So'd you," replied William, half awake.

Why Worry

About your Christmas gifts for your girl, boy, father or mother or your lady friends. A Fountain Pen is the most suitable gift for any of them. We also carry a splendid line of note paper and envelopes. Have you seen our

Christmas Novelties

They are beautiful and are sure to please. A new line of cards, booklets and calendars have just been opened up, also

Calendar Pads

They are just the thing for mounting photos or any pretty scenery. We have just a few left.

Don't Forget our Job Printing Department. Work Executed with Neatness and Despatch.

The Record

Winter Term from Jan. 2nd. ELLIOTT Business College

TORONTO, ONT.
stands in a class by itself when strictly first-class work is considered. Write for catalogue.

60 YEARS EXPERIENCE PATENTS PROMPTLY SECURED

When your feet are wet and cold, and your body chilled through and through from exposure, take a big dose of Chamberlain's Cornish Balm, bathe your feet in hot water before going to bed, and you are almost certain to ward off an ailment cold. For sale by all dealers.

CANADA'S CHRISTMAS STAMP

The Campaign for 1911 is on, and Needy Consumptives all over Canada are Rejoicing

As Archbishop Cady expressed it at a meeting of the Citizens' Christmas Stamp Committee in Toronto, a few days ago, the Christmas Stamp, now issued under the aid of the Muskoka Free Hospital for Consumptives, has become one of the institutions of the country.

Three years ago the movement was set on foot in Canada by the National Sanitarium Association, following the idea that first originated in Denmark, which was a year later spread to Canada.

The idea itself is very simple, though the results show how true it is that "great things from little acorns grow." \$11,000.00 worth of stamps is a sum sufficient to care for forty patients at the Muskoka Free Hospital for Consumptives. This year it is hoped that \$25,000.00 may be realized to assist in this great life-saving work which is ever becoming more urgent.

The cut in the corner of this article shows the design of the stamp for 1911, though the original is in three colors. This stamp does not carry any mail. One wants to remember this, though, as it has been dramatically expressed, any mail his stamps in the end of the year. This plan will serve the two-fold purpose of helping to realize the \$25,000.00 for the aid of needy consumptives, and will besides possess an educational value that can hardly be overestimated.

The stamps are on sale to-day in book stores, drug stores, and elsewhere in almost every town and city in Canada. Clergy, school teachers, Bible Class workers, Daughters of the Empire, and organizations of many different kinds are assisting in the work of spreading the sale of this little stamp. Each stamp costs only one cent, so that it becomes possible for everyone to have some part in this great battle against consumption.

We have every pleasure in urging our readers to make much use of this little messenger of healing for the next thirty days.

Ontario still produces a little over one-third of the quantity of the lumber cut annually in Canada, but its annual output, while increasing, is increasing more slowly each year. Ontario's 1909 cut was 17% greater than in 1907; its 1910 cut was only 7.5% more than in 1909. The Forestry Branch of the Department of the Interior has compiled statistics showing that 108,421,000 feet of lumber worth \$30,011,000 was cut in Ontario during the year of 1910, but that British Columbia was Canada's premier lumber province in a short time. The diversified forests of Ontario have enabled this province to hold its supremacy up to the present, as illustrated in 1910, when the chief cut of seventeen species came from Ontario. White Pine to the value of \$17,268,976 came from Ontario forests and formed 65% of Canada's white pine cut. Nearly half of the hemlock and fir cut in 1910 was cut in Ontario as was also 60% of the soft pine. Ontario contributed 40% of the hardwoods. Of the total cut of 23 species cut in Ontario, 107,000,000 feet of lumber worth \$27,000,000 was cut in Ontario, leaving 27% to be equally divided among the other provinces. The most important lumber products of Ontario in 1910, when the cut of the above higher cut, 107,000,000 feet of lumber worth \$27,000,000 was cut, the total cut was \$3,000,000.

Forestry Notes

PULPWOOD CONSUMPTION—1910.

Nearly 600,000 cords of wood were ground into pulpwood by fifty-one pulp-mills operating throughout Canada during 1910. Statistics compiled by the Forestry Branch of the Department of the Interior show that the total value of this wood was \$3,500,000, and it was converted into 475,000 tons of woodpulp. Quebec is the premier pulpwood province of Canada, because of its extensive spruce and balsam forest outside for pulpwood. 23 pulp-mills in Quebec reported the consumption of 57% of the total for Canada, or twenty three thousand cords more than in 1909. Ontario likewise increased the amount consumed in its fifteen pulp-mills by over twenty thousand cords and used over one-third of the total consumption, forming with Quebec, 92% of the total. The mills of Nova Scotia consumed nearly 30,000 cords. New Brunswick used barely one-fifth as much as in 1909, contributing in that year 15% of the total. In 1910 the amount used was only 2% of the total due chiefly to the closing of one large plant. The average value of pulpwood in 1910 was \$6 per cord per cord, and Quebec was the one province in which the price was less in 1910 than in 1909. The price in this province fell off 35c. to \$6.50 per cord. The highest price paid was in Ontario where it averaged \$7.00, while pulpwood from Nova Scotia at \$4.50 per cord was the cheapest.

ONTARIO'S 1910 LUMBER CUT.

Ontario still produces a little over one-third of the quantity of the lumber cut annually in Canada, but its annual output, while increasing, is increasing more slowly each year. Ontario's 1909 cut was 17% greater than in 1907; its 1910 cut was only 7.5% more than in 1909. The Forestry Branch of the Department of the Interior has compiled statistics showing that 108,421,000 feet of lumber worth \$30,011,000 was cut in Ontario during the year of 1910, but that British Columbia was Canada's premier lumber province in a short time. The diversified forests of Ontario have enabled this province to hold its supremacy up to the present, as illustrated in 1910, when the chief cut of seventeen species came from Ontario. White Pine to the value of \$17,268,976 came from Ontario forests and formed 65% of Canada's white pine cut. Nearly half of the hemlock and fir cut in 1910 was cut in Ontario as was also 60% of the soft pine. Ontario contributed 40% of the hardwoods. Of the total cut of 23 species cut in Ontario, 107,000,000 feet of lumber worth \$27,000,000 was cut in Ontario, leaving 27% to be equally divided among the other provinces. The most important lumber products of Ontario in 1910, when the cut of the above higher cut, 107,000,000 feet of lumber worth \$27,000,000 was cut, the total cut was \$3,000,000.

Good Air Inside.

Our supply of good air comes from God's outdoors. In the fields and parks, out in the open, almost everywhere, except in the very crowded places of our great cities the air is good. It is indoors, under roofs and inside of walls, where human beings are crowded together, that the air becomes dirty, foul and dangerous. And because we do not realize the presence of bad air in our homes and work-places, and because its ill effects are not at once noticeable, most of us who lead indoor lives are poisoning ourselves every day with dirty air. Especially is this true now that the cool weather is here and we are inclined to keep the windows closed. Nothing is of more importance than that we should have plenty of fresh, pure air indoors. We do not need an indoor temperature of 70°, although most people think that nothing less will do. As a matter of fact, a temperature of 68° is much better. So if the room be heated to 70°, we can well afford to have the windows open and let in fresh air enough to bring the temperature down to around 68° at which point it should be kept. Another important point is to insure air in that as a rule it is too dry. And this, together with its usually impure condition, causes sickness and death. The admission of a plentiful supply of outdoor air tends to increase the amount of moisture in the room air and makes it more healthful. And, finally, do not forget what we have said before in these columns, that the biggest bedroom ever built is not big enough for even one person to sleep in with the windows closed.

The Rev. Iri E. Hicks 1912 Almanac.

Before the great Drouth of 1901, the Hicks Almanac gave timely warning. For over two years prior to 1911, the Hicks Almanac again sounded a warning of drouth danger. And so for forty years this same friend of all the people has steadfastly refused the offers of special-ty contracts and the coming dangers of storm and weather. As they should have done, the people have nobly stood by Professor Hicks, their faithful public servant, who has done all in his service. Send only one dollar to Wood and Works Publishing Company, 2404 Franklin Avenue, St. Louis, Missouri, and get his Mustardine Almanac both for one year. The Almanac alone, a fine book of 150 pages, is only 25c. by mail. Let everybody respond and receive the warnings of our National Secret for the coming year.

Always do your best. Possibly the best you can do in none too good. The sympathy that does not take off its coat and get busy never amounts to much. You'll have to hurry girls if you want a box of facial soap paper, only a few boxes left. The Record.
