Helped Out From the Bench

A young lawyer is the hero of this story. At least, he was young when the incident occurred. Now his name is so prominent in legal circles that it would be unkind to reveal it.

He was defending a criminal and, in doing so, was making his first appearance in court.

"The unfortunate client for whom it is my privilege to appear," he said, his tongue and lips dry and thick; "the unfortunate client, your honor, whom I am defending—ahem! ahem!—I will repeat, your honor, the unfortunate man whom I here represent—I might say, this most miserable and unfortunate man—"

Just then the judge leaned forward and said, in a soft, encouraging manner:

"You may proceed, sir. So far the court is with you."—Popular Magazine.

[illegible], ONT.

The Worst Fix.

"Excuse me, Wombat," said the well dressed one, "but personal friendship prompts me to speak."

"What is it, old chap?"

"I fear that unless you improve your personal appearance, you may lose your job."

"I hope not."

"You need a new hat."

"Um."

"You need a new suit."

"Um."

"You need shoes. Man alive, your feet are on the ground."

"Quite true," admitted Wombat, with a sigh.

"Then take this week's salary and spruce up."

"Can't squander any money on myself, old man. My wife is worse off than I am."

"Dear me! How is that?"

"She needs a new feather in her hat."—Judge.

50 ORGANS CHEAP

We have some fifty first-class organs on hand, at prices from $12.50 to $35. These instruments have all been overhauled by our own workmen and are in first-class condition. A few great bargains are: James organ, walnut case, 5 stops, $15. Dominion organ, 8 stops, $20. Bell organ, 9 stops, $25. Send for complete list, giving full description stating what terms you would like. Heintzman & Co., corner King and John streets, Hamilton, Ont.

ILLEGAL FIREARMS.

(Peterboro Review)

It would appear that a good many people are not aware that there is a law in existence against the carrying of firearms. The liberty allowed to youths and even boys with shot-guns is not only dangerous, it is unlawful. If we have laws they should be applied.

LOCK UP THE LOAFERS.

(London Advertiser)

Lock up the loafers! That's the best way to deal with the problem of winter burglaries which the city may face. The class that will perpetrate these crimes is to be found hanging around the curbstones most of the summer. When the winter comes they feel the pinch first, and finding pockets empty, are ready to rob and assault. The police may run up bills by sentencing these men as vagrants, but far better that they feed from the public rather then the private purse.

GOOD TIMES COMING.

(Chicago Tribune)

There is growing up among the people of the United States a conviction that the relations between capital and labor in the future will have to be different from what they were in the past. Old age pensions, insurance against sickness and unemployment are being talked of, and before long will be believed in. A "new freedom" is, indeed, drawning over this country, and will soon broaden into daylight.

The present is an age of awakening of the common conscience. And with an awakened social conscience there is every reason to expect that the squalor, misery, and degeneracy which now hold a large portion of society in their grip, instead of spreading tot he rest of society, will before another century has elapsed be greatly diminished, if not wiped of the earth altogether.

Minard's Liniment Cures Garget in Cows.

Light Floating on Quicksilver.

Quicksilver is used mainly, according to the United States Geological Survey, in the manufacture of fulminate for explosive caps, of drugs, of electric lighting and scientific apparatus and in the recovery of the precious metals, especially of gold, by amalgamation. An increasing demand has been reported in manufactures of electric appliances. An interesting and interesting use in Scotland is the floating of the lights of lighthouses upon a body of quicksilver. The metal is not evaporated, of course, and the lamp in use is [illegible].

Concerning this, Consul Fleming writes as follows: "Quicksilver is used for 'floating' the revolving lights in lighthouses. The Commissioners of Northern Lighthouses, Edinburgh, have in their charge 99 lighthouses on the coast of Scotland. Up to the year 1906 the revolving lights were borne on rollers. The 'float' system has been gradualyl introduced, however, and is now in operation at 30 east stations and will be used at all others. The lighting machinery rests on a pontoon which runs on quicksilver in a groove. The quantity of mercury required in a lighthouse is from seven to eight flasks of 75 pounds each."—Consular Reports.

The Uses of Paper.

The manifold uses of wood-pulp paper are astonishing. That we have paper cord, paper bottles, paper boxes, paper houses (in Japan), paper collars, and paper cups is well known, but how many people have heard of paper screws, paper window panes, paper raincoats, paper hencoops, or paper sails for ships? These are only a few of the queer developments of the paper industry described by a writer in the Scientific American, who tells us also of the extent of the wood-pulp manufacturers.

"At first wood-pulp was used entirely in making paper, but to-day it is employed for manifold purposes. Its use bids fair to be large for moldings, friction-cutches, belt-pulleys, gear wheels, barrels (reinforced with wire), tubs, pails, washboards, waterpipes, conduits, caskets, bathtubs, carriage bodies, floor covering, electric insulators, umbrella-stands, furniture, imtaion of leather, cloth and silk. Clearly the employment of wood pulp is practically unlimited.

"The great consumers of wood-pulp to day are the paper manufacturers, who use nearly 90 per cent. of the entire production. According to the Bureau of Statistics, there are at present about 250 mills which manufacture wood pulp in this country. The capacity of these mills is over 2,500,000 tons of pulp annually, valued at more than $32,000,000. In addition to this amount, more than 500,000 tons are imported from Canada and various countries of Europe. The value of the material from abroad in 1911 was nearly $15,000,000. These figures show an increase in the business of over five hundred per cent in the past ten years, and the same time in the future promises even greater strides."

CITY MANAGERS.

(Rochester Post-Express)

In Germany city management is a recognized profession, and one that holds honor and pecuniary rewards. Men train themselves for such work as earnestly as for law, medicine or railway management. And cities engage managers precisely as private corporations hire managers, upon the grounds [illegible] record.

THE ADEN MARKET.

Earth's Hottest Town a Busy Hide Mart.

Skins, firewood, gum arabicum, beeswax and other articles are transported from the mountainous Aden hinterland on the backs of camels to the market place in Aden Camp. These caravans very often cover a large distance and their trip sometimes ranges from five to ten days, according to the size of the caravan and the speed they are able to maintain.

This is at present the only means of transportation there, since there are no railroads in the country. At various times merchants of Djibouto, which is a small French town across the straits, somewhat southwest, have tried to create a skin market in that place to the detriment of Aden, but they have never succeeded.

Large quantities of these skins are regularly shipped to the United States, says the Shoe and Leather Reporter, and it is estimated that at least 60 per cent. of the entire trade with Aden is conducted with the United States. One particular line, which in its great majority is shipped to this country, is goatskins of various grade. Abyssinian goatskins arrive at irregular intervals, but most always in pretty good sized quantities, owing to the fact that great caravans are formed in the interior of this country, as far as Addis-Abeba, the capital and residence of the famous Negus Menelik.

North of Aden as far as Hodleidah, Ghizan, Gumfeddah, up to Jeddah skins are brought to Aden by way of sailboats. This gives one an idea of the vast business territory which the trade of Aden is covering and one need not wonder about the large quantities which are regularly exported from that port. In addition to goatskins great quantities of sheepskins (Mochas) are also shipped from there.

The main street in Aden is typical of all eastern cities with their bazaars and crowded narrow lanes. It is certainly not a pleasure for any European trader to live in Aden. But one could hardly imagine the keen competition which is created through the public auctions of all the hide and skin arrivals. Owing to this fact the margins of profit are limited and calculations have to be made so closely that every possible means must be used to reduce the expenses of the skins. Almost every large hide and skin importer and dealer in this country has local houses or agents there and this mark is in continual cable communication with this port, as prices are very fluctuating.

The town of Aden, it is claimed, is one of the hottest places on earth. It is situated low with barren rocks encircling the city on all sides and rising far above the town. The thermometer ranges from 100 degrees to 120 degrees in the shade.

It is a very sensible custom there that every European employee of this trade receives a six months leave of absence after he has accomplished three years of service, and he receives full pay for the entire period of his leave, including his passage upon his return for another term of three years. But a great many of these employees find themselves unable to stand the climate and return before the specified time of the contract. From November to March is the most pleasant time of the year, as this is the rainy season, but even then the heat is so intense and the climate so damp that the natives are justified in saying, "God has created Aden; what has He made hell for?"

It very often chances that caravans come from the hinterland of Aden the so-called Yemen province, which is under Turkish government and which produces the majority of the skins called "Gabalis" or mountain skins. This mountainous country is inhabited by Bedouins, the fighting Gypsy Arabs, who hold up caravans and make them pay toll before they allow them to proceed.

As soon as there are sufficient quantities of hides and skins in the market an auction is held and the highest bidder obtains the goods. These auctions are very irregular, depending upon the arrival of caravans or sailboats. After the skins are sold they are assorted and packed in straw mats peculiar to this country, whereupon they are sent to the various consignees in Europe and America. The buyers for American houses have succeeded in outstripping the European competition and securing the greater part of the arrivals, so that it is only a question of time before possibly from 70 to 80 per cent. of the skins sold at the auctions of Aden and Hahallah will eventually find their way to American tanners.

Minard's Liniment Cures Diptheria.

Pauperized.

In a discussion of the pauperizing effect of indiscriminate charity, Mrs. Russel Sage, whose charity is always wise, once said:

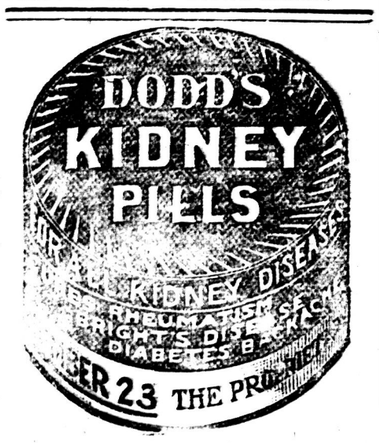
"I used to know a good old clergyman who devoted over half of his income to the poor.

"In this good clergyman's parish there was a man to whom he gave every week coal and flour, sugar and tea, potatoes and meat. Remembering how the clergyman had to deny himself in order to give so generously, a lady said to this pensioner one day:

"'Don't you think it's very good of Dr. Fifthly to look after you like this and give you all these nice things?"

"The pensioner, who was lunching on the good old clergyman's bounty at the time, looked up with his mouth full of steak.

"'Good of him?" he exclaimed. 'Why what's he fur?'"—Boston Herald.



Catarrhal Deafness Can Be Cured

A Publisher's Statement Given.

Mr. George Warner, publisher of the Masonic Registed, Toronto, was cured of deafness by Catarrhozone, and says: "During the past thirteen years my hearing has been badly affected. I could neither hear the noise of the street cars or the sound of horses' feet on the pavement. Before I used Catarrhozone three days I noticed a great change. I gradually improved till now I can hear a whisper across the room. I cannot tell how much I value Catarrhozone, which has my strongest endorsement as a cure for deafness."

Eye Alone Detects Icebergs.

There at present is no absolute method of detecting icebergs, say Captain C. E. Johnson and A. S. Gamble, of the cutters Seneca and Miami, which patrolled the route of the trans-Atlantic liners from April to May.

Capt. Johnson refuted the prevalent theory that a sudden drop in temperature meant the proximity of icebergs. Little or no change in temperature was noticeable, he said. No can icebergs, as generally supposed, be detected from a ship's whistle or bells, as, according to Capt. Johnson, a perpendicular berg may give an echo from some direction, but a lanting face reflects the sound. About ninety per cent. of the Seneca's efforts to get echoes were futile.

The presence of murres (a kind of auk), the officer declares, indicated the presence of icebergs, but he advises mariners to pay no attention to other birds.

What is Your Best Horse Worth to You?

Yet your best horse is just as liable to develop a Spavin, Ringbone, Splint, Curb or lameness as your poorest!

KENDALL'S SPAVIN CURE

has saved many thousands of dollars in horse flesh by entirely curing these ailments.

Garnet, Ont., Feb. 28th, 1913.

"I have used Kendall's Spavin Cure to kill several jacks, and removed a bunch of long standing, caused by a kick." SID. GRAHAM.

Don't take chances with your horses. Keep a bottle of Kendall's handy, $1—6 for $5. Our book, "Treatise on the Horse" free at druggists or

Dr. B. J. KENDALL CO., Enosburg Falls, Vt. 82

A Unique Tobacco.

Perique, a unique sort of tobacco raised in this country, is limited in quantity, and the district producing it is confined to a small section of St. James parish, on the west side of the Mississippi river, [illegible] Black and sticky. These juices in the "working" are reabsorbed, and during this process rum is blown into the mass. It is finally stored to cure, and at the end is of peculiar strength, with a characteristic armomatic odor. It is used in cigarettes, pipe mixtures and for chewing, and some manufacturers insert a few strands in cigars to give them fragrance.—The Argonaut.

SANOL MANUFACTURING CO., LTD., WINNIPEG, MAN.

THE POOR HOUSEWIFE.

(Pittsburg Gazette-Times)

And how many farms there are upon which the barn is a model of stability, arrangement and equipment while the house is of another generation from garret to cellar, with little or nothing to relieve the housewife's drudgery! The man progresses in his methods for attaining results and easing the strain, and he sees to it that, within the limitations of his resources, he has up-to-date appliances, buildings, etc. The woman's aspirations expand, and she knows what she ought to have, and longs for it, but too often is helpless in the precense of her husband's selfishness, deliberate or unconscious as the case may be. This is true of city life also, of course, and it would be unjust to say that farmers alone, or all farmers, are sordid and self-centered.

A FRIGHTFUL FIRE

Causes wide-spread sorrow—likewise a lively corn causes much pain—the cure is "Putnam's," the old reliable Putnam's Corn Extractor, that never fails and always cures; try it. 25c, at all dealers.

No Bribary.

A popular doctor was not long ago much pleased with a certain aerated water, and by his assiduous recommendations procured for it a celebrity it justly deserved. The doctor acted solely in the interests of humanity generally and expected no return. To his surprise there came one morning an effusive letter from the company, saying that his recommendation had done them so much good that they "ventured to send him a hundred—" Here the page came to an end. "This will never do," said the doctor; "it is very kind, but I could not think of accepting anything." Here he turned the page and found the sentence ran, "of our circulars for distribution."

REMEDY FOR H. C. OF L.

(Philadelphia Record)

There is no surer remedy for the evils growing out of the increased cost of living in the United States than to bring about improved methods of farming. An instructed farmer will get more off of ten acres of land than a greenhorn will get off of twenty with a greater expenditure of money and muscle.

Blobbs—Jack Potts is a vegetarian. He says he has no use for meat. Slobbs—Perhaps not, but I have known him to play poker for stakes.

ISSUE NO. 52, 1913

Woman's Love of Jewels.

Even in the Stone Age woman was fond of jewels. But it was man, the brute master, who wore them. The heavy necklace that descended upon his breast was the emblem of his superiority and power. Even before he had progressed so far as to cover himself with the skin of the stag he wore a necklace of shells, of teeth of animals or glittering flint. The elegant dame or demoiselle who rolls by in her limousine is not so distant a relative of the cave man as she may try to appear. She likes jewels better than dress, since each season we see her more and more bejewelled and less and less clothed. The joy of jewels is of the same infantile quality with the coquette of to-day that it was in the early barbaric times. A thread of metal, upon which are strung some shining pebbles, a thread of silk over which are placed some small round conceptions of lime, found rolling in the liquid of a diseased oyster!—Le Bresil Economique.

SUICIDES IN RUSSIA.

A special society has for some time been dealing with the question how to cope with suicides among young Russians and the famous Pirogoff society of Russian Physicians, which will shortly meet in Moscow, intends to give its particular attention to the board aspects of this sad problem. A preparatory committee appointed by the society has ascertained the following facts: In 1902 here were 23 cases of suicide in European Russia to every million inhabitants, while in 1910 the number had risen to 35. That a real epidemic of suicide is raging among the younger generation is proved by the fact that while in 1901 there were 24 cases of suicide recorded among pupils and students of th public schools under the ministry of education, the figure rose to 258 for 1910. It need scarcely be stated that suicide epidemic finds a specially fertile soil in the Russian prisons, where the number of suicides increased 14 fold between 1900 and 1910.—Darker Russia.

PILES CURED AT HOME BY NEW ABSORPTION METHOD

If you suffer from bleeding, itching, blind or protruding piles, send me your address, and I will tell you how to cure yourself at home by the new absorption treatment, and will also send some of this home treatment free for trial, references from your own locality requested. Immediate relief and permanent cure assured. Send no money, but tell others of this offer. Write to-day to Mrs. M. Summers, Box P [illegible], Ont.

CANADA'S CHILD DEATH RATE.

(Ottawa Citizen)

A writer in the Journal of Commerce, having made a careful study of the matter, asserts that in Canada 36,000 children under the age of twelve months die every year. Here is a fact and a problem that ought to arouse the interest and action of all Canadians. Canada is busy importing adult immigrants while 36,000 of her own native-born children are said to be dying every year! The matter is vital. It strikes at the very root and heart of Canadian life. Such a condition might be expected in older and congested countries, but in Canada, with opportunities for ample space and food and care, it is incredible that such things should be. Surely the primal duty is to see to it that each Canadian infant shall have greater chance of life, and in some way to stop this huge waste of life energy. Much is said of the evils of tuberculosis, but the number of children dying in their first year is four and a half times as great. Imagine an epidemic killing that many children in a year!

Making Houses in Moulds.

The idea of pouring the whole, or nearly the whole of a concrete house at a single operation in a matter which has engaged attention of Edison and others. Recently, said Cassier's Monthly, a couple of engineers experimented in the United States along this line, but, because of lack of encouragement, transferred their activities to Europe, where they have apparently been meeting with success. One hundred and twenty houses are said to be now in process of construction at Salindre, in the south of France.

From figures given in Concrete-Cement Age for May, 1913, it seems that these houses are built under contract for $1,600 each, or about 20 per cent. less than a similar house of stone or brick. The window and door frames and the sills for roof and floors are cast in advance, as are also any steps. These elements are placed in position at the time the moulds for the walls are set up. By this procedure is eliminated. The moulds for the walls are of steel. The various sections corresponding to the inner and the outer walls are held in fixed position by means of taper bolts. These bolts also serve to hold the reinforcements in position. When the moulds are taken off there remains but 10 per cent. of the structure to be completed. The concrete must flow with more than ordinary ease. In order to secure the desired fluidity, a certain percentage of clay is dissolved in the water used for the concrete, the precise amount being determined by a hydrometer.—Exchange.

Minard's Liniments Cures Cold, Etc.

POVERTY AND AFFLUENCE.

(Guelph Mercury)

Toronto is at present furnishing some intersting examples of the products of the present "system." They grade all the way from Sir Henry Pellatt's family of three in a house of 900 rooms to some of the poorer people, who, Dr. Hastings declares, are living ten families in one house of 10 or 12 rooms.

Best [illegible] To Get Relief

"When I came home last [illegible]" writes Mr. Thomas E. Jarvis, "I was all used up with cold and a [illegible] cough. I felt sick all over. My wife rubbed my throat and chest every hour, and made me gargle with [illegible] line and water. I was soon [illegible] up and made comfortable with the Nerviline, and the chilly sensations passed away. At 11 o'clock, after five hours' treatment, I was practically well. I therefore write you at once in order that it may be publicly known that Nerviline will knock out a bad cold over night."

It is a fact that Nerviline will ease up a tight chest, will relieve that [illegible] wheezy feeling, will knock out a cold in just a few hours. It penetrates deeply, draws out the congestion, [illegible] promptly. Get a large family size bottle; 50c; small size, 25c., at all [illegible] keepers and druggists or The Catarrhozone Co., Buffalo, N.Y.

Big Mammoth in [illegible]

Count Steinbock Fermor, of Great Lyakersky, Nova [illegible] presented to the natural history museum in Paris what is considered the best specimen of a mammoth [illegible].

The gift is especially interesting because the animal had not finished his last meal at the time of death, countless centures ago. The savant are for the first time able accurately the nature of the food of this far-distant epoch. They were able to examine the contents in a perfect complete condition in a [illegible]. The skin, which is without hair, is covered with reddish hair, and is to the touch as that of a [illegible]. Minard's Liniment Co., Limited.

Gentlemen,—Last winter I received great benefit from the use of MINARD'S LINIMENT in a severe attack of LaGrippe, and I have frequently proved it to be very effective in cases of Inflammation.

Yours,

W. A. HUTCHINSON.

Gave the Lecture, Though.

Sir Ernest Shackleton, the Antarctic explorer, tells some amusing stories of his experiences as a lecturer.

On one occasion he was giving a lecture at Leith, in Scotland, and he had paid £5 for the hall and £4 10s for advertising. Other expenses amounted to another pound. He drove from Edinburgh to the hall and instructed the cab-man to wait for him. In the building he found an audience consisting of an old, decrepid looking man, two men and a couple of children. Anxious to increase the number of his auditors, he went down to the cabman and said: "I will pay for somebody to hold the horse, and you can come up and hear the lecture!" The man at once replied, "Oh, no, thank you, sir, I am all right where I am." The lecture was, however, given to the bitter end, and at the close there were 25 people present. Next day he was sorrowfully recounting his experiences to his wife and calculating his losses.

"Twenty-five people at a shilling a head," he was saying, "make the total receipts £1 5s." "Oh, said his better half, 'you must deduct 2 shillings from that. I sent the cook and one of the maids."

Minard's Liniment Cures Distemper.

THE GOOD OLD DAYS.

(Toronto Star)

In the early days of the French regime in Canada under seigneurial tenure the habitants rented the lands they occupied. In the Public School Readers now in use in Ontario it is incorrect to read: "The rental varied from half a cent to two cents for each acre, and was paid in part in money, part in wheat, peas or live fowl." At the lowest rental named one good fresh egg to-day would pay 50 per cent of twelve and a half acres for a year, while one good chicken would pay the rent of four hundred acres.

THESE COSTLY DAYS.

(Detroit Free Press)

"Can a man marry on $15 a week?" asks an exchange. We refuse to reply. When a man has got to the point where he's fool enough to [illegible] question he's already made up his mind to do it.
