#### THE IRISH CENSUS

#### Recent Returns Show Progress General.

Owing to the very liberal land laws put in effect in Ireland in the last Jecade and other legislation to the advantage of the Irish people the results of the census of Bis have been awaited with unusual interest in the hope that it would be shown that conditions in Ireland had been improved. Recently the British Government issued a blue book giving the facts aseertained by the census. The results as shown are encouraging in most respects. To be sure the population has slightly decreased, but this has been due to immigration to Canada and other British col-

gration to Canada and other British colonies. Marked progress has been shown in educational lines. Finally there has been a large increase in both the number and the percentage of marriages, which is taken as one of the most certain marks of improved conditions.

The population of Ireland on April 2nd, 1811, was 4,30,219, occupying 361,379 inhabited houses, as compared with 4,468,775 and 868,182, respectively, in 1801. Figures are adduced, shewing an increase of the civic population accompanied by the decrease in the rural areas, 2,319,624 persons eccupying the latter as compared with 3,573,346 in 1891 and 3,408,627 in 1891. The no Province but Leinster (9,215) was there an increase of population, Munster, Uister and Connaught showing declines. Province but Leinster (9,215) was there an increase of population, Munster, Uister and Connaught showing declines, respectively, of 46,606, 1,130 and 5,948. Sixtynine per cent. of the number of families Byed in less than five rooms, 21 per cent. occupied two rooms, 25 per cent. three rooms, practically 17 per cent. four rooms and 58,250, or 6.4 per cent. were occupiers af one room.

There was a distinct decline in pauperium; 77.184 persons, or one in every 57 of the population, were returned as receiving poor law relief, as compared with 101,277 in1801, or 1 in every 46. On the night of the census the lumatics numbered 23,394, and the idiats 4,442, giving a total of 28,487, as against 25,486 in 1801 and 21,198 in 1801. The highest proportion to population was one in every 125 for Leinster. The number of marriages registered during the ten years, ending March 25.5. 1911. was 237,623, the births 1,622,211, and the deaths 785,811.

An examination of the tables showing the returns under religious professions shows that the Roimas Catholics numbered 1,322,630, or 755 of the population; the letter Episcopalisms 576,611. or 13.1 per cent.; the Presbyterians, 440,625, or 10 per cent.; siv other denominations (and religious unascertained) 65,652, or 1.5 per cent.; reckoning the number of illiterates. There was a distinct decline in pauper-

in reckening the number of illiterates

South thas been ascertained that 3,154,— 50534, or 57.6 per cent.. are able to read and write, 115,554 to read only, while 551,317 can neither read nor write. The number of persons in attendance for in-struction in 1511 was 704,577. or 16.05 per cent., as compared with 575,342, or 15.15 per cent. ten years previously. That for 1911 is the highest percentage yet re-

Well-no-but then, my precious To-night he touched me for a V."

YOUR MUTTON PAT.

### It's Good: Here's How to Use It.

Mutton fat is wholesome, and when served properly it's palatable. But if you're going to eat it don't let it get

You see, the mutton fat doesn't melt until it reaches a temperature of from 105 to 120 degrees, and the temperature of your body is only about 98. So the heat of your mouth won't melt the mutton tallow and it leaves an unpleasant "furry" taste.

But when the fat is once melted it won't turn hard again till it reaches a much lower temperature- say 77 to 93 degrees. And before it solidifies the dish or on the plate you beat the the age of nine years has now been sub-stituted for that of five, and on this mouth and stomach it hasn't a chance mouth and stomach it hasn't a chance to turn hard. So it taetes better and digests better.

The fat you don't eat directly with the meat it grew on can be used as a by-produce, for frying and all sorts of culinary purposes. There's real economy in that. And it's easy enough to "take the curse off it."

By mixing the hard mutton fiz with a softer fat, such as beef suct or lard. you get a softer and more palitable combination for deep fat frying and for "shortening" foods. You can even get fair results with baking powder biscuit that wav.

You can get rid of the odor of the mutten fat by mixing it with leaf lard and rendering it in milk. Divide the suet and lard finely by passing them through a meat grinder, then heat them in a double boiler with one-half pint of milk to two pounds of mutton fat and lard. When the fat has cooked out let the mixture cool. The fat cakes on the top and comes off easily. It is softer than mutton fat, has a good color, a

Savory fat is easily made. For each pound of rendered mutton fat allow an onion, a sour apple and a teaspoonful of ground thyme or mixed herbs, tied up in a small piece of cloth. Cook them in the fat at a low temperature until strain off the fat. It will be well seasoned and may be used instead of butter or other savory fat for warming potatoes, cooking vegetables, etc.

The fat removed from mutton broth or soup is also useful in similar ways, as it has taken up the agreeable vegethat in order to sleep the householder is table flavors. When the soup has cooled forced to close the window at the top. remove the fat, melt it and strain through a cloth.

### Facts for the Curious.

Miss Mary Philpot, of -San Benito, Texas, has left her entire fortune, estimated at \$100,000, to be held in trust by the town, the income to be devoted to helping unmarried women above the age of 40 who need assistance. Miss Philpot warns her executors against grass widows and provides that the unmarried women must be required to prove that they are past 40.

Knoxville, Tenn., boasts of a woman who possesses 1,882 pitchers. Her name is Mrs. James Mensley, and her home is known as the House of the Pitchers. Mrs. Hensley began collecting pitchers when she was only five, and has been devoted to the fad ever since. She has bought and has received presents of pitchers from all over the world, and her collection is said to be one of the most valuable and interesting in existence. Indianapolis News.

# PLAN FOR MORE MILK

### Good Yielding Cows the hundred times a day, when Senator Jas. Ones That Pay.

What virtut is there in heredity when it comes to abundant milk production per cow? Many a dairyman notices a eow is good, her heifers may turn out to be good milkers, sometimes they do not. What is the trouble? Apart from such considerations as feed, care and health look for one moment at the possible value of the sire.

It has been noted many a time that the cows bred to a particular bull have dropped good milking progeny; that bull came from good milking ancestry. There is the virtue of heredity worth thousands of dollars to our dairying industry. The melaneholy reflection is that scores of these good milkers can be traced to sires that have been sold for beef long before their real value had become known.

Every dairyman who is doing anything at testing his individual cows. and all progressive dairymen appreciate the far reaching benefits of such study, Painless Corn Extractor, and now wears knows that it would be worth at least 1,200 pounds of milk extra per cow to said. Try Putnam's Exeractor, 25c., at secure the right bull. All members of all dealers. cow testing associations should co-operate in the purchase of good, pure bred sires, changing them round after two years in one section, and prove thereby the immense value of heredity in their own herds.-C. F. U., Dominion Department of Agriculture, branch of the Dairy and Cold Storage Commissioner.

Minard's Liniment Co., Limited. Gentlemen-Last August my horse was badly cut in eleven places by a barbed wire fence. Three of the cuts others became foul and rotten, and though I tried many kinds of medicine they had no beneficial result. At last a doctor advised me to use MINARD'S LINIMENT and in four weeks' time every sore was healed and the hair has grown over each one in fine condition. The liniment is certainly wonderful in its working. JOHN R. HOLDEN.

Witness, Perry Baker.

The msking of a good salad is considered quite an art, but no particular skill is required for the following dressing (a substitute for oil and vinegar), and you will find people who partake of it are apt to ask for the recipe.

It has the advantage of being extremely inexpensive, and if you make more than is needed for the moment it keeps quite god in a cup or jar for a week in a cool place, or even a fortnight if bottled and corked. For five or six persons, take one tablespoonfui sour cream. Fresh cream may be used, but sour is preferable. Mix with this about half if teaspoonful sugar, and season with pepper and salt. When all these ingredients are thoroughly incorporated, pour the

dressing over the salad.

Have you ever thought of turning to secount the luscious little dandelion leaves that crop up now in the hedges and gardens? Try the youngest of these leaves with the cream salad dressing.

Minard's Liniment Cures Colds, Etc.

### RAILROADS OF THE UNITED KINGDOM.

There are 23,442 miles of railway in the United Kingdom. 10,306 miles of which are single line. The authorized capital is 55,955,283,473. In 1912 1,249,436,000 passengers were carried, of which 1,249,406,000 were third class. 15,400,000 were second class and 60,000,000 were first class. There were 735,000 "season tickets" issued. Iver 520,000,000 tons of minerals and merchandise were conveyed, which was a decrease dise were conveyed, which was a decrease under the previous year of about three and one-half millions. The mileage traveled by trains amounted to 412,564,000, which 259,392,000 miles represented distance covered by passenger trains. The receipts from passenger traffic were \$251,-163,353, and from goods traffic \$311,528,997. The total gross receipts were \$625,676.172, gain of \$1,192,963 over 1911.—Consular

### THE SPAN OF LIFE.

#### 'Tis Growing Longer With the Years. In the middle ages the average span

of human life was about 30 years. The startling prophecy that man would some throats. time only begin to understand life at 100 does not seem so unreasonable, perhaps, when we consider the span of life (small ones) healed soon, but the sllotted to vegetables and to other animale. There exists at the present time sing. The nonsinging male is not so atin the island of Cypress a tree which tractive. He gets no mate, and his race was planted 288 years before Christ, In ends with himself. the suburbs of Athens travelers are shown the olive tree of Plato, which is truth on their side. Modern scientists 2,000 years old. The plantain tree of Hip- claim they have found a better cause pocrates, the father of medicine, is 2,-300 years old, while the giant redwood trees of California are estimated to have lived at least 20 centuries. Tourists in damp climates are always noted for Hildesheim, Germany, are never allowed their beautiful singing voices. to pass the famous so-called 1.000-year- Wine and song have always been

The list of legendary trees might be indefinitely extended, and world trees include the chestnuts of Etra, the walnut trees of St. Nicholas in Lorena, the olives of Jerusalem, the vew trees of Forkshire, England, which are 1.000, 2,-000 and 2.500 years old, and the evpress of Mexico, which are considered the oldest trees in the world.

These figures are taken from the data of Dr. Legrand, a well-known French naturalist. He also points out singular differences in the longevity of animals of varying species. The crocodile and the carp live, he savs. 300 years; the elephant and the whale, 200; the falcon, 150; the parrot and the eagle, 100; the lion and the rhinoceros, 60; the goose, common pike and pelican, 50; the ass, bull and camel, 30: the hart and vulture. 40; the peacock, from 23 to 25: the pig. cow, pigeon, eat, dog, deer, wolf and the fresh water lobster. 20: the duck, nightngale, lark, fox and pheasant, 15; the canary and the cricket average 10; the rabbit lives 8: the squirrel and hare 7.

Insects which undergo metamorphosis live usually from one to two years, and there are flies whose span of life is one day. Nature, it will be seen, shows man no special favor or disfavor among the animals. The great epidemics which have disappeared at the edict of science together with intelligence in the matter of living, are the chief causes which are favoring and will in the future favor man's longevity.

English statistics show that women born of large families live to the greatest age. The United States census in 1890 showed 77 women and 34 men over 90 years of age.—Exchange.

### ITS GENDER.

A somewhat angular, severe-looking spinster was standing on the station platform outside a mail coach, specting with undisguised curiosity the ingenious net arrangement which is able to sweep in mail bags while the train is in swift motion. "Is she working all right?"

one of the officials. "Ay, ay, Bill," replied the when suddenly the lady touched him on the shoulder.

"Why do you call it 'she'," she quired, as usual athirst for informa-

"Because, madam, it's a mail eatcher." responded the courteous official. And the sniff of the angular spinster almost drowned the thrill whistle of the engine, then preparing to move on. -London Answers.

### THOSE CONSIDERATE HUSBANDS

(Ottawa Free Press.) "If you believe that a play at a local theatre is improper, don't go to see it."
says the Montreal Herald. However,
many men will plead that they ought to see these plays just to judge if it's fit for their wives to see.

He that will love life, and see good days, let him refrain his tongue from evil and his lips that they speak guile.-I. Peter iii, 10.

### FLEA-BEETLES

### Government Circular Shows Methods of Control

The Division of Entomology of the Experimental Farms Branch of the Dominion Department of Agriculture, Ot-tawa, has recently issued Entomological Circular No. 2, by Mr. Arthur Gibson, chief assistant Entomologist, on "Flea-Beetles and Their Control."

The Flea-Beetles are an important group of insects which attack the foliage of many plants. They are partieu larly destructive to the leaves of several nips, potatoes, tomatoes, radishes, etc. The chief injury is effected in spring and early summer, when the plants are visited by large numbers of beetles. Numerous small lioles are eaten into

through the leaves; in fact, some of the species completely defoliate certain plants. Owing to their jumping habit these insects were given the popular name of flea-beetles. In size they range from one-twentieth to one-quarter of an inch. In Canada there are five species which are of considerable economic importance, and these are discussed and figured. In addition, descriptions are given of eight other species which occasionally appear in destructive number. A chapter on "Methods of Control" gives full particulars as to remedies which have been found most successful in the control of these insects.

Copies of this publication may be obtained from the Publications Branch. Department of Agriculture, Ottawa.

For Women's Ailments Dr. Martel's Female Pills have been the Standard for 20 years and for 40 years prescribed and recommended by Physicians. Accept no other. At all druggists.

#### WATER FOR SINGERS.

### Latest Theory Says to Drink Plenty. If you would sing, drink plenty

water! For that is the reason birds sing, is the latest theory. People used to think that birds sang just because they were happy and be-

cause they didn't have anything better to do. Now we are told that is not so; that it is water that causes song. Watch a crowd of birds after a rainstorm. They drink and sing and drink again; and the more they drink the more melodious is their song .The water lubricates their
