A Deputation of Ladies from the Nanticoke Women's Institute waited upon the Council and asked for a foot path to be attached to the Nanticoke Bridge. The Council after giving the matter due consideration: David McBurney—James Falls, resolved that the Reeve make enquiries as to the feasibility of having a foot path attached to said bridge.—Carried.
By-laws were passed to provide money for the school and for the general expenses of the township.
Clark—McBurney, resolved that we do now adjourn to meet Saturday, September 22nd, at 10 a. m. in the Council Chamber, Jarvis.—Carried.
S. A. THOMPSON J. J. PARSONS
Clerk. Reeve.

REMARKABLE CURE OF DYSENTERY

"I was attacked with dysentery about July 15th, and used the doctor's medicine and other remedies with no relief, only getting worse all the time. I was unable to do anything and my weight dropped from 145 to 125 pounds. I suffered for about two months when I was advised to use Chamberlain's Colic, Cholera and Diarrhoea Remedy. I used two bottles of it and it gave me permanent relief." writes B. V. Hill of Snow Hill, N. C. For sale by ALL DEALERS.

Facts and Figures

Because a farmer keeps a herd of dairy cows it does not necessarily follow that each one in the herd is especially adapted for dairying. The type and general appearance may be good, the temperament and disposition may promise fair results, but the real value of each one is to be measured actually and practically by just her individual yield not the average of herd as a whole, at the end of a full season's work. Over and over again when dairy farmers have checked up the production separately of each cow there have been found wonderful surprises and serious disappointments. Those "good-looking" have turned out to be poor producers; the despised cow of insignificant appearance has often proved a splendid money maker when her moderate cost of feed has been deducted from the large total yield of the yield of milk and fat. Some cow testing figures recorded by the dairy division Ottawa, show great contrast. For instance, two cows yielding the same weight of milk may differ in production of fat. Two cows the same age may differ in profit by \$25.00. The aged cow may do far better than the five year old. Two mature cows in the same herd have been known to differ in production by eight thousand pounds of milk. One herd of twelve cows last year gave thirty-six tons of milk more than another herd of twelve. How are these vital points to be definitely ascertained by the practical dairymen? Such facts are brought to light when figures are used. It is just as simple as A. B. C. Keep records of individual production; it takes scarcely ten-minutes per cow per month, and abundantly pays every dairyman.

Save Systematically

Haphazard, occasional saving seldom accomplishes much. It's the steady, persistent, regular depositing of so many dollars a week, or month, or season, in the Union Bank of Canada, which makes one financially independent. The money accumulates all the more rapidly, too, because of the interest which is added every six months.

Try it.

Consumption Test.

In his address before his fellow practitioners last night, President Norton L. Wilson, of the Medical Society of New Jersey, declared that blood pressure determines whether a patient is affected with tuberculosis. He said he made the discovery through 725 tests of the blood persons affected with the disease and persons in good health. According to the observations, the blood pressure of a patient suffering with consumption is much lower than that in the normally healthy subject. Dr. Wilson said that with a reduced blood pressure to guide the physician he should make a test of the clotting time of the blood. Tests which he made, he declared, had shown that the blood of tubercular patients clotted in a fraction more than 3 1/2 minutes, while that of a normally
