

**NERVOUS**

Nervous, sick headaches tell of exhausted nerves and wear of approaching prostration or paralysis. By enriching the blood Dr. Chase's Nerve Food restores the wasted nerve cells and thoroughly cures headaches and other nervous disorders.

50 Cents a Box, all Dealers in Edmondson, Bates & Co., Limited, Toronto.

**Dr. Chase's Nerve Food**

**Things You Ought To Know**

New York City is now the coffee trade centre of the world. Philadelphia will shortly float a \$22,000,000 municipal loan. Martha Washington, former slave, at 72 is a night school pupil in Cincinnati. Washington has 60,000 pupils in public schools. Greater New York public schools contain \$21,895 pupils. Grade crossing accidents cost 108 lives in Pennsylvania in the fiscal year ending July 1st. Pittsburg pays \$40.10 per pupil yearly for operating schools. Los Angeles pays \$71.25; Cleveland, \$46.30, and Chicago \$45.29. African ostriches are dying of famine. London has a new daily paper, the Echo. Glasgow has the world's largest cyanide factory. Pennsylvania mines are storing coal fearing strikes next April. Cases of the plague in Russia have been traced to the fact that the victims handled camels that had died of a similar disease. In an experimental way a cannery in New York is drying and crushing cherry pits to obtain a flavor that is added to the canned fruit. Four cities in Germany, four in France, one in Italy and one in Russia have installed ozone plants for the purification of their drinking water. Shoes with quickly removable soles and heels have been invented in France for railroad men so that they can escape should their feet be caught in tracks. Smoking just before going to bed is often followed by insomnia. Ostriches can travel at a rate of over 100 miles an hour. Vegetables in England used to be punished for having the upper part of the gristle of the right eye removed. The bones of a human being will bear three times as great a pressure as oak and nearly as much as wrought iron without being crushed. As far as practicable all men on English cruisers and battleships have a bath before they go into action. A mammoth tree in California, which is 227 feet high and 50 feet in circumference, is believed to be between 5,000 and 4,000 years old. The cactus grows the richest opium of all countries. The export of opium from the United States ranks second to Mexico in value. The product is used solely in the manufacture of morphine, and is not the quality used for smoking.

**MINARD'S LINIMENT Cures Diphtheria.**

**LITTLE LOST PUP.**

He was lost—not a shade of doubt of that. For he never barked at a sinking cat. But stood in the square where the wind blew raw. With drooping ear and a trembling paw, And a mournful look in his pleading eye. And a plaintive sniff at the passerby. That begged as plain as tongue could sue. "Oh, mister, please may I follow you?" A lone weaver wail of tawny brown. Adrift in the roar of a heedless town. Oh, the saddest of sights in a world of sin. Is a little lost pup with his tail tucked in. Well, he won my heart (for I set great store On my own red Butte—who is here no more). He whistled clear, and he trotted up. And who so glad as that small lost pup? Now he shares my board; and he owns my bed. And he fairly shouts when he hears my tread. Then, if things go wrong, as they sometimes do. And the world is cold and I'm feeling blue. He asserts his rights to assuage my woes With a warm red tongue and a nice cold snuffle. And a silky head on my arm or knee. And a paw as soft as a paw can be. When we rove the woods for a league about. He's as full of pranks as a school boy out. For he romps and frisks like a three-month-old colt. And he runs me down like a thunderbolt. Oh, the blithest of sights in the world so fair. Is a stray little pup with his tail in the air.

—Arthur Guiterman.

**An Italian Superstition.**

There is an Italian superstition that whenever a king belonging to the house of Savoy dies a huge eagle is to be seen crossing the Alps over the valley of Aosta, in the direction of Savoy and the conviction prevails among the inhabitants of Aosta that this eagle guides the soul of the dead sovereign to join those of his ancestors in Savoy. When King Charles Albert died at Lissibon King Victor Emmanuel died at Rome and King Humbert was assassinated at Monza in 1900 the eagle was seen winging its way across the Alps. All other eagles crossing the Alps don't seem to count for much.—Westminster Gazette.

**ORDER OF THE BATH.**

**Dr. Wm. A. Rindley's Ceremony in the Time of Charles II.**

The last Knights of the Bath made according to the ancient forms were at the Coronation of Charles II, when various rites and ceremonies, one of which was bathing, were enforced. According to Froissart, the court barber prepared a bath, and the candidate for membership of the order, having been undressed by his equier, was thereupon placed in the bath, his clothes and collars being the perquisites of the barber. He was then removed from the water to the words "Hail" and was honored with a bath to "you" and was placed in a plain bed quite wet and naked to dry. As soon as he was quite dry he was removed from the bed, dressed in new rich apparel and conducted by his sponsors to the chapel, where he offered a taper to the honor of God and a penny piece to the honor of the king. Then he went to the monarch, and, kneeling before him, received from the royal sword a tap of the shoulder, the king exclaiming: "Arise, Sir." He then embraced him, saying, "Be thou a good knight and true."—London Strand Magazine.

**MINARD'S LINIMENT**

I was cured of terrible lumbago by MINARD'S LINIMENT. REV. WM. BROWN.

I was cured of a bad case of earache by MINARD'S LINIMENT. MRS. S. KAULBACK.

I was cured of sensitive lungs by MINARD'S LINIMENT. MRS. C. MASTERS.

**SOLAR ENERGY.**

**Its Constant Radiation is Lessening the Mass of Our Sun.**

The work of Einstein on the principle of relativity shows that a body which radiates energy loses a portion of its mass depending on the energy radiated. It follows that the sun, which continually radiates energy, is constantly losing mass. M. J. Bostier has calculated that the sun loses a mass equal to that of our earth in 20,000,000 years. If it be assumed that the mass thus lost is gravitational mass it follows that the length of the year increases by six seconds in 1,000,000 years and that in the same time the mean longitude of the earth is affected in such a way as to produce a variation of one-tenth of a year—that is, a retardation of thirty-six days in the seasons. Such variations are so minute to be unobservable. In stellar systems possessing a higher temperature, the effect would be much more marked, for the energy radiated by a body varies as the fourth power of its absolute temperature. If, as M. Nordman believes, there exist stars having a temperature six or seven times that of our sun, their radiation is one to two thousand times as intense. Thus, if the temperature of Algor is 13,500 degrees, it is calculated that at the end of 2,000 years the weight of Algor will be reduced by about twelve minutes.—Boston Herald.

**MINARD'S LINIMENT Cures Diphtheria.**

**British Army Swords.**

Swords in the British Army vary to a very great extent, and practically every branch of the service has its own type of weapon. The difference is not so much in the shape of the blade as in that of the hilt. The sword used by the infantry has a large cross-guard, bearing the royal cipher and crown. There is a slot at the top of the hilt for the sword knot, really a leather loop ending in a knot to prevent the loss of the sword. The infantry sword is perfectly straight and is sharp on one edge only. The regiments have a special sword of their own with the rifle badge laid into the open-work guard. Very much the same sort of sword, but with a still more open guard, consisting of three curved bars, is used by the royal engineers, a distinction they prize. The claymore of the Highland regiments has a big basket hilt lined with red cloth and blue ribbons. The officers of some Scottish regiments carry a plain cross-hilted sword without a guard. Until a few years ago the cavalry were armed with sabres. Nowadays, however, they carry swords of the straight rapier pattern. The guard is a large affair, completely shielding the hand.—New York Times.

**When?**

"When will it end? I asked the sage; He answered softly: 'With this age.' 'That will be when?' with hope I cried. 'In God's due time,' the sage replied. 'And God's due time—when may that be?' 'When man knows his extremity.' 'Ah, then it must be soon,' I said; He smiled, but sadly shook his head. 'Oh, tell me what you know,' I urged; 'When shall our universe be purged? Of all its wrongs and disorders rife?' 'When Death is swallowed up of life'—Orlando Spinning Adams in the Christian Herald.

The silence is in the starry sky.—Wordsworth.

**Two Points of View.**

He had a lot of money, but no discoverable ancestor, and so it came that he affected contempt for pride of birth. And there was another man whose family tree was tall and unimpeachable, but who possessed no other assets worth mentioning. A discussion between these two men was of profound interest. Each avoided hurting the other's feelings, but it was not to detect an undercurrent of antagonism. They concluded: "Say, what you will," asserted the one. "It's a fine thing to come of good stock." "It's a finer thing," replied the other, with finality, "to own it."

**Setting a Fashion.**

Some years ago the coral fishers of Torre del Greco, near Naples, were in hard straits. The value of coral had fallen so low that they were no longer able to find purchasers for their harvest. At last in their despair they devised the queen to come to their aid; at the first great court ball that was given that year at the Quirinal the queen, to the surprise of all beholders, wore about her neck a collar composed of six rows of coral. Instead of the superb collar of pearls, and her black hair was crowned with a diadem of coral and brilliants. From that evening the mode changed. Old coral ornaments that had been hidden away for years and years were again displayed at the jewellers, and were snapped up by eager purchasers. Queen Helena's ball was attained, and that court ball marked the beginning of more prosperous days for the coral fishers of Torre del Greco.

**HEAD-SPITTING BITNESS REMOVES INSTANTLY**

**RUB ON NERVILINE**

Neuralgia quickly cured is twice, nay, ten times cured. Little neuralgia pains grow into big ones, but "Nerviline" in ten minutes relieves even the worst ones. Even a single application will remove the nerve congestion that causes the pain. Nerviline penetrates deeply into the sore tissue, reaches the source of inflammation, drives it out root and branch. Every drop of Nerviline is potent in pain-relieving power, and its strongest claim lies in the fact that it acts right-in, even to the very last drop. Nerviline is not greasy, and its pain-relieving power is at least five times greater in strength than ordinary remedies. We guarantee Nerviline will cure neuralgia—not only relieve it, but actually and permanently cure it. Just in the same way will it cure lumbago, sciatica, stiffness and rheumatism. To conquer all muscular and nerve pain, use Nerviline. A large bottle is the home-keeper's doctor's bill; small, Get the large 60c family size bottle; it is more economical than the 25c trial size. Sold by all druggists everywhere, or the Catarthosone Co., Kingston, Canada.

**PASTEURIZE SOIL.**

**Many Fine Results Claimed for New English Treatment.**

They are pasteurizing the soil in England, thereby adding tremendously to its productivity and greatly promoting the health of the vegetation which it supports. In a report of the Rothamstead experiment station Dr. E. J. Russell asserts that the process accomplishes the following results: First, it increases the production of nitrate and ammonia; second, it destroys many disease-producing organisms; Protococcus and organisms detrimental to bacteria likewise suffer; third, it forms certain substances not usually found in the soil; fourth, it works a very marked improvement in the more heavy soils. The effect on the plant is, in brief, to give it a larger supply of nitrogenous food and a healthier medium in which to grow. The work is generally accomplished by heat, usually steam, but the station is diligently seeking some means by which it may be done chemically, which would be and far more convenient. Experiments have been confined almost entirely to green-house and nurseries, the cost has been reduced from a shilling and a half per ton of soil to six pence a ton, and the prospect for a still farther cheapening is good.

**UNIVERSITIES' RECRUITS**

The universities' companies are now well known throughout Canada. A fresh company is raised, equipped and partially trained about every two months, and it is unnecessary to advertise for recruits, inasmuch as each company is made up of brothers or relatives or friends of those who have joined previous companies. The first company under the command of Captain Gregor Barclay has joined the Princess Patricia's Canadian Light Infantry, and has been for some time in the trenches. The second company under command of Captain George McDonald and Captain Percy Nelson is also on the continent. The third company went overseas about 250 strong, and has gained a golden reputation at Shorncliffe. The fourth company is at full strength, and has now embarked. In quality it is in no respect inferior to its predecessors. A fifth company has been authorized, a large number of applicants are on the waiting list, and recruits will be welcomed at Montreal on or after Nov. 27. Those who wish to join must receive a rigorous medical examination by an army medical officer. Those who are not medically and physically fit are not wanted, so there is a subsequent examination on reaching Montreal. The recruit should also be attended locally before the nearest justice of the peace, and transportation to Montreal can be speedily obtained by sending a night lettergram to Captain A. S. Eve, 232 Sherbrooke street west, Montreal. On arrival the recruit is issued without delay his blankets, palliase and uniform, and his training commences on the campus of McGill University and on the slopes of Mount Royal. As to barracks, the Canadian Northern Land Company loans the headquarters building, McGill University lends the Molson Hall, and the students not only lend the top floor of the Union, but also give the soldiers the privileges of a dining hall as though they were students. Moreover the Y. M. C. A. opens its quarters and places the swimming pool at their disposal. The training is varied, and includes shooting at the C. P. R. gallery, drill, tactics, bayonet fighting and physical training. Nearly 1,200 men have already been raised by this organization, which is efficient and also economical inasmuch as there are no officers above the rank of captain. A considerable number of young men who cannot get commissions in Canada are joining the universities' companies with a view to commissioning in England. About fifty men who joined as private have already been appointed as officers. Information has been received from London that there is room for forty to fifty month if suitable men are forthcoming. Particulars may be obtained from Capt. A. S. Eve, 232 Sherbrooke street west, Montreal, who is in charge of the depot.

**TO REMOVE STAINS.**

**PERSPARATION.**

Under-arm perspiration may be removed by muriatic acid. Other perspiration, by a strong soap solution and hot sun.

**COFFEE.**

Boiling water will remove coffee stains. Pour the water on the stain from a height, letting it fall slowly.

**TEA.**

Tea stains may be removed by the same process as that for coffee, but the article must first be soaked in cold water.

**IRON RUST.**

The combined action of lemon juice, salt and hot sunshine will dissolve iron rust. If the stain resists this treatment try muriatic acid.

**PEACH.**

Alcohol will remove peach stains. The action will be quicker if the alcohol is heated over water. Afterwards rinse with boiling water poured from a height.

**GRASS.**

Alcohol will remove grass stains from a garment which cannot be washed. Rub the alcohol on the stain lightly with a circular motion. Alcohol dissolves the coloring matter in plants.

**INK.**

Sweet or sour milk will remove ink stains. The article must stand in the milk for several days and the milk should be changed every day. Peroxide of hydrogen and diluted ammonia will remove the stains if they are fresh. Cold water and ammonia removes red ink.

**EGG PRICES.**

For the first time in a number of years eggs have taken a prominent place in Canada's export trade. This is largely due to the unprecedented demand for eggs on the part of the British market, and the fact that British dealers have shown a marked preference for Canadian eggs over United States eggs, and a willingness to pay a distinctly higher price for them. So great in fact has been the demand that Canadian dealers have shipped practically all of the available Canadian storage product to the Old Country. As a result there is sufficient in Canada at the present time, not in eggs in storage to supply home consumption until fresh receipts in appreciable quantities begin to come in. Quantities of eggs from the United States, however, are being imported, but the larger part to take the place of the Canadian product exported. On account of the keen demand for Canadian eggs above mentioned, United States eggs can be laid down in Canada at the present time, duty paid, at several cents per dozen less than the price at which Canadian eggs are selling for export and they should be procurable by the consumers accordingly. On the other hand the Canadian market at the present time is very firm for Canadian "specials" (new laid) the production of which is not enough to meet local country markets. This means that high prices will have to be paid in consuming centres in order to draw a portion of these supplies from local points. Producers may therefore definitely expect reasonably high prices during the period of low production for fresh gathered eggs that will grade "specials."

**HOUSEKEEPER**

In washing ribbons, add a little pearlash to the suds and faded ribbons will be restored to their natural color. If a small tear appears on the inside of a child's rubber, sew a bit of elastic on the inside and it is temporarily mended. Try washing windows with very hot water and kerosene. R.D. pepper blown into a piano will keep out moths. If you wish flower slips to bloom while plants are young, put the cuttings in small crocks. As soon as the crocks are filled with roots, plant and they will begin to bloom, especially geraniums. To keep pancakes from being greasy and heavy, do not have batter too thick, and be sure that the griddle is piping hot. To clean wicker chairs, wash with salt and water, then rub dry as possible and place in the open air to finish drying. Baking soda wet and bound on warts will remove them, it is said. Place mirrors so that the direct rays of the sun do not fall upon them. It gives the glass a milky appearance which can never be entirely remedied. To remove slight scratches from silver, sweet oil a little putty powder with water, mix a little putty powder with sweet oil to a paste and apply to the scratches, wipe off, and polish with chamolva. Oatmeal can be used instead of barley or rice in the soap. It thickens it, and adds a flavor which is pleasant. Sugar should be added to turnips, beets, peas, corn, squash and pumpkin. A meat chopper may be better cleaned by running a piece of bread through the machine before washing. If hands are red and unrightly, wash them in buttermilk, then rub them with almond meal.

**JUST KEROSENE**

**Keep a Bottle On Hand, It Useful in Following Ways.**

Kerosene is a splendid polish for tinware. Always wipe discolored wingers with kerosene. Nothing equals kerosene for removing rust from iron. Kerosene used to moisten stove polish makes stoves look like new. Wash zinc with hot, soapy water and polish with cloth dipped in kerosene. Irons wiped on a cloth dampened with kerosene will not scorch clothes. To prevent white garments from looking yellow, put a little kerosene in the wash water. Linoleum and oilcloth are both brightened and improved by rubbing with flannel dipped in kerosene. Before storing any stovepipe for summer, rub it all over with kerosene and stuff ends with paper to keep out moisture. To clean the sewing machine, moisten all bearings with kerosene and run rapidly for a few minutes; then carefully wipe off the liquid with a soft cloth. Use kerosene instead of soap for cleaning sheathed floors in proportion of one cupful to each pail of water. Have water lukewarm, use a soft cloth and afterward polish with floor mop. Kerosene removes paint spots from porcelain or hardware floors. Saturate a cloth with it and rub spots briskly. Then rub with chamolva wrung out of hot water, for china, and soft cloth for floors. Immerse all metal articles that have rusted in kerosene and allow them to remain there till rust has softened, then wipe with soft cloth, polish with whiting, bath brick or sand soap, according to finish of metal.

**Conspiracy Arrested**

New York Report—day of Edmund Justice employed by the American Steamship Co. cleared by Federal of the "missing link" evidence proving that the pany was the financial German Government against American men to have been uncovered by the Department of Justice and was born in Court. Justice was arrested and fellow-conspirator head of the Hamburg-tive bureau, who is charging to blow up the. Shortly after Justice's representing Koening's United States Commission and gave \$30,000 bail. Justice was arrested on January 12. This more than \$100,000 Hamburg-American Co. for men accused of plotting against the American neutrality.

**Conspiracy Arrested**

It is charged in the under Koening's direction to Quebec in September there gained information. While the complete so, the authorities have submitted his information representative of the German general staff. It is also hinted by the authorities that information Metzler, who was Koening's secretary, was used by this country in planning the Dominion of that under the pretext for torpedoes, the ship from Canada for England. The complaint on which arrested says specific purpose of Koening and J. ascertain the number of very being transported out of Canada to ports of Great Britain, the names upon which said torpedoes were transported, the kind and supplies which were from the Dominion to Great Britain, and other which would or might be the German Government would assist the military the German Government. The complaint charges that Koening was one of the hiding the whereabouts of the transport of this basis of operations. that Justice and Metzler on September 15, 1914, Quebec; that Koening left on the 18th and met Metzler and, Maine, and that he in Shelburne, Vermont, where on 25 he conferred with Justice. The authorities also suggest that Koening was an assortment of information; that they inspected the camps, observed the nature of the condition of the mented the time when the sent to the front. It obtained information movements of the transport course they would take to either France or Italy. The preparation of this series of charges that against Koening, which also is thought possible in short time enough have been gathered to Koening as a figure in the of the alleged plot of Koening others to blow up munitions ships. The Federal authorities in a systematic manner back to the beginning of the archedological order. The Federal authorities that Justice was a graduate make a confession that was put on the trial for the by servants and experts who would give nothing more. NOT A SQUEALER "You can cut my arms off," he said, "but I will make me talk. It won't be my children that they are equaler. No, I am not a squealer. I am anti-British."
