******** THE PREVENTION OF DISEASE.

Without a good foundation no man would expect to build anything of great value. The health and strength of a flock of poultry depend largely upon its that made her appear even more than | foundation. In breeding or selecting the stock from which to build a flock start your strain from a line of ancestors which have been physically perfect and free from illness of any kind. Like breeds like, and with strong ancestors there is no difficulty in raising a flock of strong young birds. Fifth breeds disease, and the greatest care to avoid filth is necessary even from the time the hen is set or the incubator is started.

If one is having his foundation stock is necessary even from the time the hen is set or the incubator is started.

If one is buying his foundation stock, whether young birds or old ones, it is wise to be pretty sure there are no germs of disease lurking near and great care should be used in making your selection. If all is clean about the place where the birds you are looking at are kept the chances are that it is a good place to buy; out if there are signs of filth everywhere it is better to be gau-

Disease germs do not often penetrate the oviduct and a fresh laid egg is usually free from them, though germs may be acquired under a hen in a short time. Eggs rubbed with a dampened cloth dipped in alcohol will be absolutely free from germs, and if then placed under a hen that is free from lice and mites will hatch chicks that are free from disease of a standard likelie disease. digense of and limit and left eases are rare and can be

avoided by never using for breeding purposes hems that have ever shown signs of sickness.

In the first days of the chicks life, even if they have been hatched under the perfect condition just described, there are two great dangers—that they that theory, this man's perfect features need not surprise her. Doubtless, when he opened his lips, his breeding would proclaim itself.

He was staring across the table now to where Mabel sat, laughing and conversing merrily with old Younge, and seemed slightly amused with the girl's gayety. Was he going to fall in love will be overted and that they will be come chilled—either of which is likely to prove disastrous. Although overfeeding is not as dargerous as chilling, either is likely to lead quickly to white diarrhoe, and the two conditions combined are likely to result fatally to the entire flock, or at least the greater part of it. But this does not make it necessary to keep them; there is a happy needing both of them from cold, which is not difficult to reach if one uses judgment and gare. ed; and then he met her with both hands extended and, looking kindly at her, declared out loud, for the benefit of the assembled company, "She is the bonniest iass I have seen for many a day.
