

CHINA'S MODEL CITY.

Latest Undertaking Would Put It in Suburbs of Hong Kong.

For a good many years schemes have been entertained from time to time for the erection somewhere in South China of a model city for the use of the well-to-do Chinese. Chinese people of wealth and Chinese returning from the United States, Australia and other sections of the globe with a knowledge of modern cities have felt this need, and in recent years several attempts have been made to launch such a project.

One scheme went so far as the organization of a city at Heungshan, not far from Kowloon and within a short distance of Hong Kong. This city was established upon Chinese soil and by special arrangement with the Chinese government. It was to have certain custom privileges; it was established upon modern sanitary lines, and its close proximity to Hong Kong, on the one hand, and its location in the part of China from which come most of the Chinese in America on the other, were expected to make it attractive. The city has made little progress however.

The latest undertaking of this sort is for the construction of a model suburb of Hong Kong along the most modern lines for the housing of wealthy Chinese. This plan involves the reclamation of a tract of land about a mile and a half long and a third of a mile broad, the construction of wide avenues and fairly wide side streets, the erection of 47 blocks of high grade apartment, tenement and smaller buildings, and the establishment of a modern sewerage system and other public utilities. In spite of war and the uncertainties of finance the company undertaking this enterprise has been formed and its plans completed, and work is to commence at once.

Increasing numbers of wealthy Chinese from various parts of south China are coming to Hong Kong to

MINARD'S LINIMENT is the only Liniment asked for at my store and the only one we keep for sale.

All the people use it.

HARLAN FULTON.

Pleasant Bay, C. B.

MAGIC BAKING POWDER

E.W. GILLET COMPANY LIMITED

If need for them arises on the water front of the reclaimed land. The depth of the water now over the site averages about one and a half fathoms. With the extension of the piers and the dredging to be done in reclamation work sufficient depth for ordinary ocean-going vessels will be had at all tides.

Unless delayed by a lack of machinery it is expected that the reclamation will be completed in about two years.

Commerce Report.

Minard's Liniment Used by Physicians

The Eternal English Sparrow. The same little sparrow was a pest in ancient Egypt in the time of Rameses. It has outlived nations, tribes and dynasties. Laws have been passed against it in Germany, Austria and France declared war on it, the British Parliament made it the subject of an investigation. It was imported into Australia and has become such a nuisance there that laws have been enacted against it; but, through it all, the little gray-coated sparrow has twittered, chirped and chattered on, and reared its five or six broods a year.

Kansas City Star.

The Wood Pewee. (By Charles Barthrop)

With ashly breast and olive wing. In leafy maze and lonely tree. Upon my branch balancing. Sat little wailing wood pewee.

To wind lament in stately pose. Like those in selfish sorrow blind. And din the woods with minor woe. Such seemed the bent of pewee mind.

But when this percher made a dart. He snatched his beak with lightning vim. And every moth he caught apart. He made a sacrifice of him.

A habit of complaint had he. But for my life I could not tell. How, day by day, this wood pewee. Upon his dry branch would dwell. Could all so much and eat so well.

Pewee, pewee his troubles flow. If sadness he were called to bear. What living thing would wish to know The grief that waked his trivial air.

He soothes me, does this wood pewee. I scarcely know the reason why. But life is less dear to me. Without his little wailing cry.

—From The Canadian Magazine for March.

A. McKim Limited Advertising Agency New Executive

The new Executive of A. McKim, Limited, Advertising Agency of Montreal, Toronto, Winnipeg and London, Eng., has been announced.

During the last few years the late Mr. Anson McKim had gathered around him an executive staff capable of relieving him of all but a general oversight of the rapidly growing business of the advertising agency which he founded nearly thirty years ago, and which now comprises four offices in different cities and over 140 employees.

Since his death, these experienced men have been carrying on the work in the same efficient way that has characterized "McKims" for so many years. The personnel of the executive as now organized is J. N. McKim, President and Treasurer; W. B. Somers, McKim, Vice-President; Mrs. B. Somers, General Manager; H. E. Stephenson, Secretary; C. T. Pearce, Manager at Toronto; Thos. Bell, Manager at Winnipeg; W. Keeble, Manager at London, Eng.

The appreciation of the value of advertising space in local and home papers of modest circulation, always a strong feature of this Agency's policy, will be as marked as ever under the present management.

SPEED HIGH IN AIR.

Aeronautical Theory Borne Out by Bird Migration.

The statement that a flying machine with a normal speed of 40 miles an hour would travel at a height of 5 miles at 150 miles an hour—made by Dr. Graham Bell, is supported by an ornithologist, Doctor Bell's view, is supported by an ornithologist, Doctor Bell's view, is supported by an ornithologist.

That birds use this quality of the air now seems probable. Some of the migrants arriving in England have been observed to dive down from an uncyclable height, as has often been observed in the case of the weak flyers should cross the North Sea in one dash, they are endowed at that moment with a sudden access of power. May it not be that then only they find themselves in the thinner higher air? Swifts, which are the most rapid flyers of all, for the most part fly higher than other birds.

It is true that many birds have been observed to fly low during migration. Swallows especially have been seen migrating at a low elevation, and even to cover 15 miles an hour—London Mail.

Clover Hindin Jugglers.

It is admitted that the Hindu jugglers and acrobats are the most skillful in the world. One of the latest reports is about a performer who went through many wonderful feats perched on the top of a single bamboo stick about fifteen feet in height. The top of the stick was tied to a girdle around the waist, and a leg rest was provided by a cushion a few feet down the pole.

Deepest Sea Near Shore.

The deepest parts of the sea are not in the middle of the oceans, as many commonly supposed, but near the shore. Thus the Swire deep, 32,000 feet more than 3,000 feet deeper than Mount Everest, is off Mindanao in the Philippines; the Aldrich deep, 30,500 feet, is off the Tongan and Kerwadeek islands; and the Tuscarora deep, 27,000 feet, is along the coast of Asia north of Japan.

THE ONLY MEDICINE FOR LITTLE ONES

Mrs. Timothy Bowes, Blenheim, N. B., writes: "I have always used Baby's Own Tablets for my three children and I can speak very highly of them as I could not get along without them. Baby's Own Tablets are the only medicine I would use for my children." The Tablets cure all the minor ills of little ones and the mother who always keeps a box of them in the house may feel reasonably safe against the consequences of sudden attacks of illness. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Over Africa by Rail.

It is now possible to cross Africa by rail and winter in practical comfort. Kings in Africa could always travel in comparative comfort; but one not a king had difficulties to contend with, which are being slowly removed by the steady extension of the means and methods of civilization. Following approximately the trails traversed by Livingstone and Stanley in penetrating the heart of that vast continent infested by wild animals and hostile natives, the traveler to-day may go from Banana at the mouth of the Congo River on the west coast, to Dar-es-Salaam on the Indian Ocean, a distance of 3,046 miles. All but the last section, Kilgomo to Dar-es-Salaam, is in Belgian Congo, and the transcontinental trip may be made, with good connection, in forty days.

The gauge of the railroads in Congo is two feet, five and one-half inches. Lake Tanganyika is 2,642 feet above the sea level. The final gap in this route, Kabalo to Albertville, was finished and opened to traffic in 1915, and the map of the route of the Congo is a fair outline of a tropical helmet.—The Christian Herald.

Minard's Liniment lumberman's friend

"Don't you consider an order of rare beef improper?" "Why, so?" "Because it isn't done, you know."

Punch Bowl.

TRADE BRIEFS.

Imports from Nottingham, England into the States in 1915 amounted to \$2,262,554, an increase of \$4,632,413 over the imports of the previous year.

Potash is being produced by a company at Durham, Ont., as a by-product from the Feldspar used in the manufacture of Portland cement. The company has eight kilns and fifteen tons of potash are produced daily.

Mr. Anton E. Smith, chief forester at Stavanger, has recommended that western Norway be reforested with Douglas fir. This timber if planted now would be of marketable size in eighty years.

Russian timber exporting firms and sawmill proprietors have conferred with Government officials about the development of timber resources in northern Russia. It is estimated that an annual cut of 2,000,000 feet can be obtained.

The Royal Commission on the Colliery Coal Industry of Western Australia has suggested that American locomotives and conveyor machinery be installed there.

Artificial limbs are needed at Havre France. The French Government supplies to soldiers the first limb needed, and it is asserted that contracted with several American firms for the supplies required at military hospitals.

British fire department at Vancouver, B. C., is interested in powerful marine fire pumps to be used in protecting the city's water front.

Teacher Has Not Lost One Day in a Year

MRS. ROGER GIVES CREDIT TO DODD'S KIDNEY PILLS.

Before that She Suffered from Sciatica, Neuralgia, Nervousness and Other Troubles Coming from Sick Kidneys, Which Dodd's Kidney Pills Cured.

Elm Tree, Gloucester Co., N. B., April 5.—(Special)—Mrs. Jos. Roger, the popular teacher here, is fully recovered from a long siege of sciatica, neuralgia, and other troubles resulting from diseased kidneys and has made a statement in which she gives Dodd's Kidney Pills all the credit for her cure.

"My trouble came from a strain," Mrs. Roger states, "and I suffered for thirteen months. Backache, headache, neuralgia, dizziness, and failing memory were among my symptoms. When the doctor I consulted failed to do me any lasting good I decided that my kidneys were the root of my troubles and decided to try Dodd's Kidney Pills. I took twelve boxes in all and you may judge of the results when I tell you that I have not lost a day's work as teacher in the last year.

"I can say that Dodd's Kidney Pills have done all for me that was claimed for them."

Others of Mrs. Rogers' symptoms were nervousness, and a dry harsh skin that itched and burned at night. They all came from diseased kidneys and all vanished when she used Dodd's Kidney Pills.

The Whiners.

I don't mind a man with a red blooded kick. At a real or a fanciful wrong; I can stand for the chap with a grouch, if he's quick To drop it when joy comes along. I have praise for the fellow who says what he thinks. Though his thought may not fit in with mine. But spare me from having to mix with the ginks. Who go through this world with a whine. I am willing to listen to sinner or sinner. Who is willing to fight for his rights. And there's something sometimes in an honest complaint. That the soul of me really delights For kickers are useful and grouches are wise.

For their purpose is frequently fine. But spare me from having to mix with the ginks. Who go through this world with a whine. —Edgar A. Guest in Detroit Free Press.

Ask for Minard's and take no other

The Hangman's Stone.

There is a large bowlder lying in a field near Foremark, England, which is known throughout Derbyshire as the "hangman's stone." The exposed portion of the bowlder rises about six feet above the surface of the surrounding field and has a narrow ditch or indentation running across the top. The mark, so tradition says, was made in this way: A sheep thief in the dead of night, while peeping against the bowlder to rest, placed his body above on the flat surface of the stone. The man had the sheep tied with a rope, and in its efforts to escape the creature slipped on the opposite side, and the rope, catching under the thief's chin, choked him to death. The indentation in the rock was made by the friction of the rope while the dying man was engaged in an effort to extricate himself.

Time is money, except that it isn't quite so scarce.

RIBBONS FOR SUMMER HATS.

Warm-weather hats show a liberal use of ribbons, particularly those hats of the sports variety. So far the ribbons employed are mostly narrow, but milliners prophesy the wider ribbons for hats, once the narrow ribbons have gained an assured entree.

Very narrow velvet ribbons are sometimes braided into bands, wide bands, for sport hats, the ends being left loose to form a fringe, and huge tassels, sometimes the sole trimming of a sports sallow, are fashioned of these narrow ribbons.

Very narrow ribbons, especially those of velvet, are used for embroidering designs upon straw hats, and sometimes upon wider ribbons that will adorn millinery. Very effective are the cat-o-nine tails, grapes and birds thus made.

The narrow grosgrain ribbons, however, continue to be of first importance in sports millinery, both in simple bands and in most unusual bows. Those hats made entirely of grosgrain ribbon will continue to be fashionable during the summer, especially for country club and week-end wear.

One of the most extreme novelties for the summer season is that of the ribbon beach pillow, which must match the hat, at least in color if not in material. The pillow is oval in shape and finished with ribbon loops, that it may be hung upon the arm.

"Narrow ribbons," says one ribbon manufacturer, "are now in demand for millinery, but one never knows when the wide ribbons will have the field. Consequently we manufacturers are making a most tempting assortment ahead of time. Ah, you should see them—ribbons of Oriental character including casimere effects, East Indian, Persian and Arabian patterns, all of the richest colorings! Nor are we neglecting the plain satin ribbons, for we're hoping and expecting that sashes will be the rage toward the end if not at the beginning of the summer, and we want to have ribbons of the very newest tints and shades ready."

Keep Minard's Liniment in the house

Three Classes in Chile.

Although Chile is a republic, and all men are theoretically equal in the eyes of the law, yet in reality this is not so, and the people are divided into three classes. The first class is the people, and for the people does not exist. There is a privileged class, composed mostly of the descendants of the old wealthy Spanish families, who exercise great power in all branches of the state, and control the destinies of the country.

Between them and the middle class there is a fixed gulf, but even a lower class, the people, who are looked down upon with contempt. Extreme poverty and misery exist in Chile, as it is found in the large cities of Europe, and it would not exist at all if not for the economy and foresight practiced by the working classes. Intemperance, which is the sole cause of poverty, has been almost entirely eradicated. The government and the congress have signally failed in the regulation of the copper traffic and in arranging with conditions and forces that make for poverty, and which the working classes in their genuine generosity are helplessly unable to overcome. Let it be granted that the working classes of Chile can earn a good living, if not a comfortable one, and that they are almost impossible for the worker to find a decent dwelling to make a home in which a very minimum of cleanliness and comfort can be found.—"Christian Herald."

LET a woman ease your suffering. I want my simple method of home treatment. I send you ten days' free trial, post-paid, and put you in touch with women in Canada who will gladly tell what my method has done for them.

IF you are troubled with weak, tired, nervous, or irritable feelings, head-ache, back-ache, nervousness, dizziness, or any of the above, or if you are suffering from any of the following conditions, write to me at once, and I will send you my simple method of home treatment, which will give you relief and permanent cure.

A MESSAGE TO WOMEN!

The Age of a Horse.

To tell the age of any horse, inspect the lower jaw, of course. The sixth front tooth the tale will tell. And every doubt and fear dispel. To middle "nippers" you behold. Bore the colt is two weeks old. Before eight weeks two more will come; Eight months, the "corners" cut the gum. Two outside grooves will disappear. From middle two in just one year. In two years, form the second pair; In three, the corners, too are bare. At two, the middle "nippers" drop; At three, the second pair can't stop. When four years old, the third pair goes. At five, a full new set he shows. The deep, black spots will pass from view. At six years from the middle two. The second pair, at seven years; At eight, the spot each "corner" clears.

At nine, the black spots will withdraw. From middle "nippers" upper jaw. The second pair at ten are white; Eleven finds the "corners" light. As time goes on the horsemen know, The oval teeth, three-sided grow; They longer get, project before; Till twenty, when we know no more.

Irrigation makes things grow, especially a thrist.

Haiti's Food Trains.

Nearly all the produce for the feeding of the population of Port-au-Prince, Haiti, a city of some 50,000 people, is brought in on the backs of donkeys. The public square are converted into open air market places, and here the buying and selling goes on from early morning until 4 or 5 o'clock in the afternoon, when the caravans begin their toilsome journey homeward. Situated in a region famous for its fine fish, among them the delectable and plentiful "red snapper," the Haitians eat quantities of salt cod imported from Massachusetts waters. And the quality of this imported staple is such as would not find favor in American markets.—National Geographic Magazine.

GLASS CUPS.

The first glass cups were made at Alexandria. Some were colored like Bohemian glass and decorated with glass pastes, imitating precious stones and carvings. Some were plain, others clear as crystal and still others formed of opaque layers veined together. The famous Portland cement, which the white upper layer had been cut away like a cameo, leaving a blue ground around the figure.

HAIR GOODS FOR LADIES AND GENTLEMEN

A WHOLE REGIMENT

(Guelph Mercury).

The Toronto Star at considerable length goes into the make-up of the various departments of a newspaper as follows:

"It is a mistake to suppose that the editorial department of a newspaper is the department that 'turns out editorials.' That is only part of its field. The department prepares all the reading matter, except advertisements, that appears in the printed pages, and it is divided into a variety of branches. The news staff gathers and writes the news; the editorial staff, composed of the editorial writers, interprets the news, draws conclusions from facts, or comments on the facts. In most newspaper offices in North America, the head of the news staff is called the managing editor. Under him is one group of men called the local staff, another designated the telegraph room, and others known as department editors. There may also be an art department and a library. The local room (or city room) is in charge of the city editor, to whom the staff of reporters is immediately responsible for the gathering and writing of all news of the city. There are also a few desk men who correct the work of the reporters, write headlines for it and prepare it for the printers. The telegraph editor handles all news that arrives by telegraph or long distance telephone. The two Canadian telegraph companies and one or more press associations have operators' desks in nearly every daily paper in the large cities of Canada. The department editors are mainly specialists in charge of some small department of the paper, and they are called editors because their copy goes to the printer direct, without passing through the hands of another editor. The department editors include the sporting, the financial, the commercial, the dramatic, questions and answers, etc."

Because of the war, chloxy is selling high in England—at from \$125 to \$140 a ton, whereas in normal times it can be bought for \$35 to \$40 a ton.
