Hunt, London, Ontario.

### New Motor Law.

The new motor vehicle regulation have been received and a number of changes have been made to them which local motorists would do well to observe. After this is no one under the age of 16 may drive a motor car. The age limit has thus been reduced from 18, and many youths will welcome the change. There is however one obstacle to this. Those over 16 and under 18 must try an examination and go through the same tests as a taxicab driver, and if they prove they are competent to drive, will be given a permit to do so. The fines imposed for failure to observe these laws will be severe.

### 3rd Anniversary of War, Aug. 4

The following proclamation has been issued by the Ontario Government:

"Whereas Saturday, the 4th day of August, 1917, will be the third anniversary of the declaration of war and the occasion calls for fitting and solemn recognition throughout our Province;

"We therefore, believing it to be right and proper that our people at that time reaffirm their belief in the righteousness of the cause in which we are fighting and their inflexible determination to continue the struggle until victory has been achieved, have thought fit by and with the advice of our Executive Council for the province of Ontario, to appoint the said day to be observed throughout the province in the manner aforesaid;

"And we do hereby urge the calling of public meetings throughout our province on the date mentioned for the purpose of stimulating the devotion and patriotism of our people and of embodying these sentiments in appropriate resolutions and thereby uniting them effectively for the supreme effort which is necessary to bring to a victorious issue the struggle for the maintenance of those ideals of liberty and justice which are the common and sacred cause of the allies."

Mr. and Mrs. Chas. Brown and children visited Sunday evening with Mr. and Mrs. John Pond.

### A Message From the Red Cross.

Mrs. Belmont Tiffany has written for the August issue of Harper's Bazar a very interesting article on "A Message from the American Red Cross to the Women of America". She especially mentions the part that women of society are taking this work, and also tells of the organization's rapid growth since the war began in 1914.

Mrs. Tiffany explains very clearly the different functions of the Red Cross; has a Department of Civilian Relief, with which the Department of Military Relief cooperates. In other words, the Red Cross is responsible for relief of all kinds for our own army and navy and is chartered to take care not only of the sick and wounded soldiers, but of all who need aid of any sort. It is also required to take care of and look after the dependents families and children of the members of the United States Army and Navy. All over the country we are doing civilian relief work."

### Warning

I hereby seriously warn those who were concerned in the stealing of honey from the bees located on the farm of Mr. Jas. Williamson.

It is altogether too serious a matter to treat as a joke for a large apiary of bees once thoroughly aroused by such nightly depredations would cause great inconvenience and perhaps be the death of a stock near by.

Take this as a friendly but serious warning and remember you are welcome to all the honey you can eat if you will come and ask for it.

Arthur F. Hodgson.

### Potato Crop Insurance

It is estimated that 25 per cent of the potato crop of Ontario or approximately 5,000,000 bushels, is lost annually by the farmers of Ontario due to attacks of the Late Blight and of the Colorado Potato Beetles. This loss can be prevented by spraying thoroughly at regular intervals with Bordeaux Mixture as a fungicide to prevent blight and Paris Green or Arsenic of lead as a poison to combat the beetles.

Late Blight is a fungus disease which is particularly noticeable on potatoes in late summer and is quite serious when the weather is at all warm, moist and muggy. It is first noticeable in the form of dark colored spots on the leaves which soon begin to curl up and in some instances the diseased portion of the stem and leaves emit a small like that of bad fish. A careful examination of the under surface of the leaves where these brownish spots appear will reveal the presence of a greyish white mould or mildew. The spores produced in these spots on the leaves are scattered by wind and water and are capable of infecting a healthy potato leaf and starting the disease afresh. If no spraying has been done and weather conditions are at all favorable, the spores thus produced rapidly infect the surrounding plants and the disease spreads most rapidly. The disease can be prevented by thoroughly spraying with Bordeaux Mixture. It is an insurance, in fact an investment worth while.

### Bordeaux Mixture

The Bordeaux Mixture for controlling Late Blight, also Early Blight, should be very carefully prepared and applied in a very thorough manner in order to be effective.

The formula is:—4 lbs. Copper Sulphate (bluestone), 4 lbs. Lime, freshly slaked, 40 gals. water.

The Copper Sulphate and lime should not be mixed in concentration solutions as this lessens the value of the mixture and fungicide. Dissolve each separately and dilute by making up to 20 gallons with water before straining into the spray tank. Bordeaux should be used fresh, though stock solutions may be kept for an indefinite period. These stock solutions may be made as follows:—Put 20 lbs. of water in a barrel and suspend 20 lbs. of bluestone in an old sack just below the surface of the water. The bluestone will soon dissolve and each gallon of the solution will contain 1 lb. of copper sulphate. Slack 20 lbs. of lime, good burnt lime, and make up to 20 gallons with water. To make the Bordeaux Mixture put 4 gals. from each of the stock solutions in separate vessels and dilute each to 20 gals. of water and mix together in the spray tank.

In order to control the Potato Beetles some poison may be used along with the Bordeaux Mixture. Add 1 lb. of Paris Green and 1 lb. of Arsenate of Lead to 40 gals. of the mixture. This has proved a very effective remedy.

In order to do effective work all parts of the potato plants should be covered with a fine mist or spray. The plants should be sprayed about every two weeks. Carefulness and thoroughness pay and pay well; while careless and poor is simply energy and materials thrown away.
