HELPING THE CHILD.

Some Don'ts for Mothers to Turn Over in Their Minds.

A few don'ts might well be conspicaccusty posted in many a mother's THE FIRST LINE OF DEFENCE mind.

Don't consider it necessary to systematically underrate your child. Your adult friends will know you do not mean it, but the child will not, and probably more characters are weakened by the lack of self confidence engendered by such a process than by the vanity which follows the silly bragging of overfond parents.

Don't think that the moment you are alone with your boy or girl you must find fault or endeavor to imgrove the occasion by a little moralizing, no matter in how loving a spirit. This is the hardest of all, for no one is so anxious to help a child toward perfection as is its parent, yet it sure-By leads to an avoidance of the moments alone together, which should times of happy confidences.

Don't correct the child before oth-Never mind if a well meaning relative does say: "My dear, I am curprised that you do not show more force of character. Your children are suffering from a lack of discipline." Pass the matter over until you and the small offender can have it out mione. If the circumstances are such that it cannot be passed over take him out of the room.

Lastly, laugh often with, but never at your child. This takes self denial, but it pays: Make up your mind that whatever others may say he can depend upon you for a quick, sure understanding without quibble or joke at his expense. This does not mean that st not take his share of harmdess fun. It is wholesome, and too much sheltering would make him oversensitive, out the mother who lets her child know that she never makes an of him will be surprised at the confidence with which he relies upon St. - Mother's Magazine.

MUSICAL TRAINING.

It Should Have a Place in the Education of Every Child.

We shall make no real progress in eusic in this country, says Bruno luhn, until we come to consider a training in the rudemnts of music as an essential point in the education of our children.

Too often parents excuse their remissness on the ground that their children show no spontaneous desire to study music. Because a child shows no such desire to study reading, writing and arithmetic lo we for that reason permit him to neglect totally these subjects? No normal child desires to study any subject, and a failure on the part of a child to crave a musical education should not be permitted to exempt him from such training.

In my opinion the average child should begin to study music at the age of eight or nine and for at least two years devote an hour a day to the exercise of it.

After two years the child's preference and aptitude may safely be consulted in regard to further study. But in any event the two years of study have not been wasted, for he has already learned something that will be of use to him all his life.

Musical training, especially in the home, should have a place in the education of every child.-Exchange.

Pure blood is the body's first line of defence against disease. Strong, healthy blood neutralizes the poisons of invading germs, or destroys the germs themselves. That is why many people exposed to disease do not contract it. Those whose blood is weak and watery and therefore lacking in defensive power are most liable to infection. Everybody may observe that healthy, red-blooded people are less liable to colds and the grippe than pale, bloodless people. It is the bloodless people who tire easily, who are short of breath at slight exertion, who have poor appetites, and who wake up in the morning as tired as when they went to bed. While women and girls chiefly suffer from bloodlessness, the trouble also affects both boys and men. It simply affects girls and women to a greater extent because there is a greater demand upon their blood supply.

To renew and build up the blood there is no remedy can equal Dr. Williams' Pink Pills. They tone up the entire system, make the blood rich and red, feed and strengthen starving nerves, increase the appetite put color in the cheeks, give refreshing sleep and drive away that unnatural tired feeling. Plenty of sunlight and wholesome food will do the rest.

You can get Dr. Williams' Pink Pills

Population by Sex.

About half the probable population of the world has been enumerated with relation to sex. About 50.3 per cent. male, 49.7 per cent. female, is the result of this count. Only in Europe, among continents, do the females outnumber the males, the proportion being: Female, 50.6 per cent.; male, 49.4 per cent. In most parts of the world of which we have information the reverse is true. The percentage of males in British India is 50.9; in the tributary states, 51.7; in Japan, 50.5. In the United States by the last census there were 106 males to 100 femaels, the divisions of native, foreign, etc., being as follows: Native white of native percentage, 104 males, 100 centage ,99.5 males, 100 females; foreign white ,129.2 males, 100 females; The cod fish has the reputation of other, 185 males, 100 females.—New No Floating Island and No Im-

EMBROIDERY.

the Laundry.

No matter how precise the work of embroidery needle or crochet hook, the finished product can never be judged until it has been through the hands of when the work is done on washable material. To best wash centrepieces one should use lookwarm water and soak rather than be rubbed. Sometimes a very soft handbrush can be of the threads of the embroidery.

Thorough rinsing in several lukewarm waters is a necessity, and then the piece should be rolled in a towel until the irons are hot.

Embroidery is best ironed wet with a hot iron, the embroidered side laid have failed to show that that the to raise it and bring out the pattern generally. Eyelets can be further raised and opened by going through them after ironing while still slightly damp with a stiletto or orange wood stick.

Always iron embroidered linen with the thread. If you iron the centre of a round piece first you will find the outside will ruffle. If you iron the outside first the inside will pucker. Iron right across the whole piece with the thread to get best results. Never approach any piece of work diagonally. Sometimes in working one will pucker the work in places. These should be wet and stretched until dry before pressing at all. Of the embroidery seems to be taking up too much of the material and the centre still puffs in spite of all your efforts, try shrinking it out and placing a very hot iron down on the wet goods just on the puffy portion, leaving the iron as long as possible and not moving it Care must be taken not to

Oftentimes stretching before frontage will bring a piece into shape. Mark

SARGASSO SEA MYTHS.

prisoned Derelict Ships.

The shortage of potash, owing to the war, has greatly stimulated the business of recovering potash from a kind of seaweed known as kelp, on the Pacific coast. They drag up the kelp with rakes made especially for the work, dry and burn it and get Minard's Liniment Cures Diphtheria. potash from the ashes. This has led to the formation of a company in Florida, which proposes, if it can get capital to back it, to build a floating potash works which will be towed out to the Sargasso Sea and anchored to one of the vast islands of floating seaweed supposed to exist there. The plan is to manufacture potash at a forever because the supply of seaweed is inexhaustible, covering an area almost as large as the continent of Europe, and tightly matted into islands.

The formation of the company emphasizes one thing: That the ancient myths about the Sargasso sea are still generally believed, and that it is still a mystery to many, probably to the majority of persons. The old geographers described the

Sargasso Sea as impenetrable and in- "that's what all the boys say."

The so-called Sargasso Sea is an eggshaped area of ocean about 1,700 miles from east and west and 1,000 miles from north and south, lying due east from the coast of Florida. It is really a kind of eddy; it owes its existence to the ocean currents that encircle it; while in this great area of nearly 2,000,000 square miles there is scarcely any current. Seaweed does exist there in quantities, but the greater part of its growth is a surface seaweed kept afloat by tiny bubbles; but there are no floating islands of matted seaweeds and no derelicts im- it. In other words, she would soon be prisoned there for years.-Kansas City "Star."

So Say They All.

Some time ago a charming girl came to town to spend a week with a young woman friend. While there she was induced to take part in a church bazaer, and was given charge rate of 200 tons a day. The prospect- of the confectionery stall. Eventually provided you don't struggle against us of the company says it can go on a middle-aged man was led that way. "They tell me I must buy some chocolates," smiled the victim, picking up a box from the stall. "How much is this?"

"Five dollars," answered the girl without any visible evidence of conscientious pangs.

"Um," thoughtfully returned the victim, glancing from the chocolates to the girl, "aren't you a little dear?" "We'l," coyly rejoined the other,

THE CAR SHORTAGE

Consignees Can Help by Ordering Full Carloads.

The railways solicit consignees' cooperation in their endeavor to provide all their patrons with a satisfactory freight car supply.

CONSIGNEES CAN HELP BY OR-

DERING FULL CARLOADS. Many consignees never order more than the minimum authorized under the tariffs and classification. The result is an economical waste which reduces the efficiency of the railways and the public suffers.

To increase the average car loading by 1 ton, would be equivalent to placing 10,960 additional freight cars in service in Canada.

To fully load cars would go a long way towards solving our transportation difficulties. Railways realize that some consign-

ees cannot always order full carloads. but they are requested to help by ordering in as large units as possible. A CAR SAVED IS A CAR GAINED. The difference between minimum

loads and full loads of certain standard commodities is given herewith: Flour shipped in 214 lb. barrels. Minimum load 210 bbls.: A 20 ton car will hold 300 bbls., a 40-ton car will hold 315 bbls. 98 ib. sacks. Minimum load 459 sacks: A 30 ton car will hold 673 sacks, a 40 ton car will hold 900

Sugar shipped in 100 lb. sacks. Minimum load 300 sacks: A 30 ton car will hold 660 sacks, a 400 ton car will hold 940 sacks.

Cement shipped in 87 1-2 lb. sacks. Minimum load 457 sacks: A 30 ton car will hold 754 sacks, a 40 ton car will hold 1074 sacks. Nails shipped in 107 lb. kegs, Mini-

mum load 280 kegs, A 30 ton car will held 616 kegs, a 40 ton car will hold

CONSIGNEES CAN HELP BY PROMPTLY RELEASING CARS. must admit that this tennis racket has is unnecessary—they do not delay to do with it except practise strokes however, who appear to be satisfied if they release cars in what is known as "free time." Again, there are still others who hold cars in storage service for weeks, and such consignees are largely responsible for car short-

ages and terminal congestion. A recent check of cars placed for unloading and held by consignees at some of the stations on one of the railways showed 700 cars delayed an average of twelve days. Had these cars been released within even five days they would have made nearly .400 trips, and would have handled about 35,000 tons of freight. 2,615 other cars unloaded within three days could have been placed for delivery on the tracks occupied by these 700 delayed cars.

The railways do NOT want their cars to earn demurrage, but want them employed in carrying freight. A ROLLING CAR GATHERS NO DEMURRAGE.

If consignees will order freight her twenty-fifth year so many times average loading by 5 tons per car, that her ingenuity was about to crack and if they will reduce the average delay in unloading by 24 hours, it will prevent car shortages In Co-operation There Is Efficiency.

Life's Little Perversities.

There are many little perversities in this life of ours. Doctors cannot heal themselves. Dentists nearly always have bad teeth. Undertakers rarely die and never bury themselves. Editors cannot edit themselves. Financial authorities are always broke. Chefs have no appetite. Tailors are always poorly dressed. Barbers usually need a shave. Bartenders seldom partake—unless it be of a cigar, merely to keep the shingles on the roof. There is no need to multiply instances.-St. Louis Post-Dispatch.

In These War Times you want real food that contains the greatest amount of body-building material at lowest cost. The whole wheat grain is all food. Shredded Wheat Biscur is the whole wheat in a digestible form. Two or three of these little loaves of baked whole wheat with miliand a little fruit make a nourishing, strengthening meal.
