HOME STUDY

Why Lightning Rods Are Pointed.

The reason a lightning rod has a

sharp point is because a fine point

offers no resistance to the discharge

of electricity and in order that a cloud

may be emptied of it noiselessly and

harmlessly. The degree of resistance

is in proportion to the surface of the

object. If the rod were surmounted

would be violent. But many a light-

ning rod has received an electrical dis-

charge when the people in the build-

ing below were calmly unconscious of

the fact. Noncorrosive metal is used

for the point of the rod, for corrosion

makes resistance. The difference be-

ween a point and a ball is shown in

discharging a battery. The full charge

from a large battery would be re-

ceived quietly on a metal point, while

a moderate charge from a small one

would explode violently on a ball. It

is said that a full charge may be

passed harmlessly through a person's

body if received on the point of a

needle, whereas the same charge re-

ceived on a discharger with a hall or

knob on the end, would mean instant

Turn Your Daily Waste Into Nourishment.

Some Good Recipes That Will Help.

There are three obvious ways to reduce the cost of living. We can so increase the production of the necessaries of life as to bring supply into nearer balance with demand, thus insuring normal prices; or we can cut down consumption of what we eat and wear by the practice of simple economy; or we can eliminate waste.

To increase production takes time, but there is instant relief to be obtained through the practice of economy and the stappage of waste. Our housewives have no adequate

idea of how greatly they may contribute to the general welfare by the stoppage of waste. What we throw into the garbage can or feed to the pigs the French woman puts in her soup kettle. In that depository she finds it possible by judicious admixtyre and proper seasoning and simmering to extract the full measure of remaining nutritive substance and place it upon her dinner table in vari ous and enticing forms of relishing soup. If meats are not always available there are hundreds of ways of preparing meatless soups of fine flavor. It is not an exaggeration to say that the housewives of the country might do much to float it back into

Minard's Liniment Co., Limited.

Dear Sirs -This fall I got throw on a fence and hurt my chest very bad, so I could not work, and it hurt me to breathe. I tried all kinds of Liniments and they did me no good. One bottle of MINARD'S LINI by a knob, for instance, the discharge MENT, warmed on flannels and applied on my breast, cured me com-

the haven of cheaper living by a generous outpour of eavory soups.

The following soup suggestions are made by Elizabeth Lee, a practiced writer on the subject of domestic economy:

In these days of high cost of living meatless soups will be a means of saving and really better than the heavier GREEN PEA SOUP.

a quarter of shelled peas in three pints of water, then rubbing them

water in which they have been boiled. One tablespoonful of flour is beaten into two tablespoonfuls of butter and then added to the peas. Salt and pepper to taste come next, and finally one quart of boiling hot milk is gradually stirred in. The mixture should be cooked about 10 minutes. If the boiled with the peas.

This is one of Mrs. Parloa's recipes andris a most delicious soup.

Corn chowder, though quite an inexpensive dish, is very appetizing. A cupful of corn is boiled soft and then rubbed smooth. In the meantime cut two ounces of fat pork into small pieces and fry with a sliced onion. Cut up four large potatoes into cubes and scald one quart of milk. Put corn, pork fat strained, potatoes, milk and seasoning into a -aucepan and bring

to a boll. Rub a couple of tablespoonfuls butter into a little flour and add to the chowder to thicken.

Dried herbs are a great boon to ousekeepers who live far from a store. In fact, city residents find them a very great convenience, too, They come in compact form, and the process of drying is so complete, even the fresh herbs are not found to be

where an Austrian cruiser is reported to have sunk several armored British patrol boats recently, have sailed some of the greatest history-making expeditions of ancient and medieval CORN CHOWDER. times," says the National Geographic "This fifty mile expense of Society. water. which joins the Adriatic and Ionian seas, separates the southeastern extremity or heel of the Italian peninsula from that part of Albania which was known in ancient times as Epirus.

Cows.

"It is sixty miles from Otranto, the beautifully situated Italian fishing village, which gives its name to the Straits, to Aviona, the nearest port in Albania. Four hundred miles to the northwest are Venice and Trieste, at the head of the Adriatic, while 350 miles to the southwest, beyond the Ionian sea, is the British possession,

Malta. "At the beginning of the war Otranto was a town of searcely more than 2,000 inhabitants, but of some importance as an Italian terminus of the cable and telegraph line to Constantinople, via Aviona. It also had cable connection with the Island of Corfu. The town's historical associations date back to Gracco-Roman times, for it occupies the site of the ancient Hydrus and was one of Rome's ports of enbarkation for Apolionia, the famous centre of culture and city in which the future emperor, Augustus, was completing his education at the time that he was summoned to the capital following the assassination of Julius

"Otranto was one of the Calabrian towns captured in 1068 by Robert Guiscard (the sly), that resourceful Norman adventurer who, at the high fide of his career, gave e of duplicating in Southern Italy and in Greece the triumphs won by his flow contry man, William the Conqueror, who during the same decade was subduing England. Four hundred years later the seaport was again raided, and this time

was completely destroyed by the Turks. From this setback it never recovered. Among the points of interest in the village to-day are the castle, built by Alphonso of Aragon, and the cathedral, which dates back to the eleventh century and in which are to be found some of the columns that once graced the temple of Minerva at

San Nicola, near by. 'South of Otranto is an extremely fertile and populous section of the rugged heads, armed with two long ivory Apulian peninsula, which terminates thirty miles below the town in the promontory of Maria di Leuca, with its white limestone cliffs marking the southeastern extremity of Italy. To the northwest of Otranto, fifty three miles by rail, is Brindisi, the famous Brundustum of the ancients. which has taken life in recent years owing to its advantageous position as a gateway for the freight coming from beyond the Alps through the St. Gothard and the Mount Cenis tunnels, destined for the Far East through Suez.

"Avlona, also called Valona, on the eastern shores of the Otranto Straits, has the best harbor on the Albanian coast, being protected by the Island of Saseno and the lofty Cape Glossa. Like Otranto, it suffered pillage at the hands of the Turks in the fifteenth century, but it recovered from this Minard's Liniment Cures Diphtheria. misfortune more readily than its Italian sister city, for it is now a town of 6.000 people, and enjoys a considerable trade in hides, olives, cottons, cattle and bitumen. while it is famous for valonia, made from the acorn cups gathered in adjacent oak groves. This flour,' which derives its name from the town, is used extensively in the

tanning industry.
"It was across the Straits of Otranto 600 a year. that the valiant Pyrrhus, cousin of New York State consumes 370,550. scendant of Pyrrhus, son of Achilles sailed in the third century before the Christian era. Espousing the cause of the people of Tarantum, he fought those desperate battles against Rome which gave rise to the familiar phrase. "a pyrrhic victory," used to-day to describe a conflict the successful issue of which is so costly to the victory as ultimately to prove disastrous. It was after Heraclea, where for the first time in history Greeks and Romans were the opposing forces, that Pyrrhus, surveying the field where thousands of his bravest troops lay dead, exclaimed: 'Another such victors and I must return to Epirus alone.' It was on the same occasion that, observing the wounds of all the Roumans killed in action to be in front, he mused. 'Had I such soldiers I should soon be master of the world'"

THE WALRUS.

Developed Maternal Instincts.

The walruses or "sea horses" of the old navigators are the strangest and most grotesque of all sea animals, says National Georgraphic Magazine. Their large, tusks, and their huge swollen bodies, covered with hairiess, wrinkled, and warty skin, give them a formidable appearance unlike that of any other animal. They are much larger than most seals, the old males weighing from 2009 to 3009 pounds and the females about two-thirds as

Walruses have a strongly developed maternal instinct and show great devo-tion and disregard of their own safety in defending the young. The Eskimos at Cape Vancouver-Bearing Sea, hunt them in frall skinicovered kyaks, using ivory or bone-pointed spears and seal-skin fleats. Several hunters told me of exciting and dangerous encounters they had experienced with mother wairuses. If the young are attacked, or even approa-ched, mother does not hesitate to charge furiously. The hunters confess that on furiously. The hunters confess that on such occasion there is no option but to paddle for one's life. Occasionally an old walrus is unusually vindictive and, after forcing a hunter to take refuge on the ice, wil remain patrolling the vicinity for a long time, roaring and menacing the object of her anger.

ANTICS OF PURE GLYCERIN.

This Queer Substance is Endowed With Peculiar Properties.

One of the great advantages of glycerin in its chemical employment is the! fact that it beither freezes nor evaporates under any ordinary temperature.

No perceptible loss by evaporation has been detected at a temperature less than 2,000 degrees F., but if heated intensely it decomposed with a smell that few perhaps find themselves able to endure. It burns with a pale flame, similar to that from alcohol, of heated to about 300 degrees and then!

Its non-evaporative qualities make the compound of much use as a vehicle for holding bigments and colors, as in stamping and typewriter ribbons, carben papers and the like,

If the pure giveerin be exposed for long time to a treezing temperature i crystallizes with the appearance o sugar candy, but these crystals begin once melted it is almost an impossibility to get them again into the congealed state.

If a little vater be added to the giv cerin no crystalization will take place, though under a sufficient degree of cold the water will separate and form crystals, amid which the glycerin will remain in its natural state of fluidity If suddenly subjected to intense cold. pure glycerin will form a gummy mass which cannot be entirely hardened or crystallized. Altogether it is quite a peculiar sub-

Big Telephone Pole.

The highest telephone or telegraph pole in the world has recently been installed to carry wires over a river in the state of Washington. The old pole at this point was 90 feet high, but the increasing size of the steamers using the river made it necessary to raise the wires. The new pole is 130 feet high, a single stick of Oregon fir. It took a crew of 12 men and a denkey engine to set it, and it is further secured by a double set of guys and braces, running from point half way to the top to nearly trees.

THE AGE OF THE EARTH.

In This Lady's Story Radioactive Evidence Brought Forward.

> Ditimates of the age of the earth based on radioactive and ordinary geological phenomena differ greatly from each ther. In a recent discussion of this subject Arthur Holmes points out that estimates of the former estegory have all been based on the assumption that the radioactive "constants" of mannom and its daughter elements have not varied with time. On this assumption it is calculated that something like 1,500,000, we wants represent the time that has elapsed since the crystalization of the oldest plutonic tocks of the earth's crust since there is geological evidence that these rocks are intrusive into a pre-exsince there is geological evidence that here rocks are intrusive into a pre-exiting sedimentary or volcanic series, the ictual are of the earth would be much greater than this. On the other hand, decided by lower figures; say 109 000,000 decided by lower figures; lower Joly has radioactive and geological estimates a disablear in favor of the former could be shown that the rate of determining has decreased with the odd be shown that the rate of de-f granium has decreased with the of time, deaders of the novels G Wells, who is rapidly attain-ne reputation of a Mother Shipton is strength of the things in 12's g which have later come to pass, recall that in describing the deatht half its initial substances for that aciding "minime bomb" he introduced a cancept similar to this—that of a discintegrating element which in any period of a certain fixed length dissipates exactly half its untial substance for that period. More rapid decay would, however, have been attended by a more rapid generation of heat however, have been attended by a more rapid generation of heat of radioactive origin, and this would have prolonged or even reversed the secular cooling of the crust, against incleating an excessively great age for the earth. The escape from the dilemma would appear to be to deny that the earth's surface was formerly in a molten condition. The whole subject, is of course, largely apeculative in the resent state of science, it will, however, help greatly to clucidate the problem of the earth's age if it can be determined whether the rate of decay of uranium is dependent upon time, pressure and temparature.—"Scientific American."

By Special Delivery.

The burglar had just begun his term and was assigned to work in the broom factory. Near him was an oldish man who studied him intently and seemed to be awaiting an opportunity to say something. It was while the overseer was at the ice tank. "How long are you in for?" he whis-

pered. "Twelve years," replied the new-
