RULE FOR SLEEPING.

Most Everybody Should Be in Bed Eight Hours.

For a long time and in the majority of places in this country it has been the habit to stay up late at night, and in some places the early morning hours have not been given much attention. Of course, this refers principally to the larger towns and cities, and while there would of necessity be some people getting to work at seven o'clock, the average man or woman coming along at eight or even later would find things still in the cleaningup and opening-up stage. Sunrise, on the mountains or at sea or in the rural districts, is an event worthy of attention and well rewards the early riser with its beauty and significance -but the early riser in the town or city has usually found everything untidy and must step over ash cans and dodge the sweepers and be satisfied with the sleepy grunts of workmen who are getting things into shape for the business of the day. It is anything but picturesque and most unattractive.

Whoever it was that discovered sleep decided that at least one-third of

Minard's Liniment

Is a Great Preventive, being one of the oldest remedies used. Millard's Liniment has cured thousands of cases of Grippe, Bronchitis, Sore Throat, Asthma and similar diseases. It is an Enemy to Germs. Thousands of bottles being used every day for sale by all druggists and general dealers.

MINARD'S LINIMENT CO., Ltd., Yarmouth, N. S.

a person's life was properly spent in bed, and therefore, when the crowd stops up until midnight it is healtihy and wise to remain under cover, or t anyway on the pillows, until eight o'clock. The dancer or card-player (certainly we mean bridge and other perfectly proper games), lingering for the last one-step or the final hand, until one o'clock, should not be disturbed until nine. And so on, according to the accepted plan of health and happiness. But taking the other side of the argument—or rather reversing the Minard's Liniment for sale everywhere programme, let the average person attire at 10 o'clock and rise at 6.

Probably a whole lot of people will grumble at the schedule suggested, and we don't pretend to say that it must be done. We haven't been appointed sleep director yet, nor given the right to wake people at a certain hour. A great deal has been done, however, in will be required. the last year that tends to a more reasonable sleep and waking scheme. Through the winter and early spring two nights each week were allowed limited lighting only. This was calculater to send the people home earlier folks at home after dinner or supper, designation of the evening meal. A allow the fish to remain in it.

great amount of fuel was waved, according to report, and up to date no damage has been reported to busin society or individuals. Now that the clocks have been moved ahead and the summer days have many hours of sunshine, the lighting proposition doesn't affect the situation materially.

The stores are ciosing early and the tendency seems to be for an earlier retirement generally. In Miami they are trying out a curfew law—but it isn't a is good. Dr. real currew. It only refers to young folks under a certain age, and it won't amount to a great deal. The English understand that sauce should be provided of suitable strength for both the gander and the goose, and even have regard for the goslings, and in English land the currew law closes all places of amusement and all business enterprises at a certain reasonable time. Parents are expected to take care of their young daughters and sons and themselves. The theatres and concert halls, restaurants and dance halls. halls, restaurants and dance halls, and recreation enterprises generally plan their propagandies to begin early and end in time for their patrons to get home considerably before midnight. There is no penalty for rising early in

10 o'clock, is likely 90 per cent. up at 90 per cent. of the population of this country is certain, and thousands and thousands can live beautifully happily, and proftiably with a smaller average of sleep. A few really need more than eight hours. Thomas A.

London or elsewhere, and the popu

tion now very generally retiring about

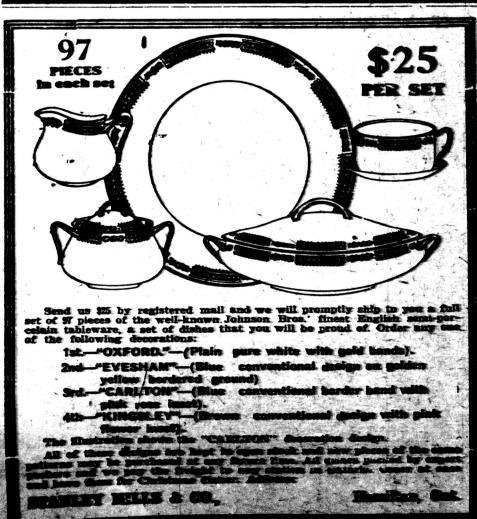

Edison has been quoted as saying that four hours' sleep was sufficient —for him. Possibly he said it, and pos-sibly that is enough for some men at some period of their lives. The great big majority need more than four hours, and also can do very well with eight. , It is then evident that by co-ing to bed as early as 10 e'clock and rising at 6 the worker will have a whole lot of morning time the best always for work or pleasure or both. Everything is suggesting a normal schedule, and at least one of the old saws may "come back," and prove its truth after generations have greeted only with laughter that "early to bed and early to rise" means health, wealth and knowledge.—Florida Times-Union.

Worth Knowing.

cream before mixing with the flour Tit-Bfts. only about half the usual quantities

In cocking potatoes put a cloth ever the saucepan before you place the lid on and they will cook in much less time and be very mealy.

The scales may be easily removed than usual, and served to keep some from a fish if you immerse it for a minute in boiling water. Pour the according to the designation of the water over it very quickly and do not

LEGAL JARGON

Those who are accus ble at the length of the to everybody. That it is enough for use but a short time ago. In the "

on parchment is said to be must be stiful to look upon. But the conveyancing act practically put an end to their profession by Fratily C facility the length of lagar ill running.

Of the unwieldy prolimity of some of the old long-winded conveyances a law reformer of a humorous turn of mind gave the following among amongle: "If a man were to give another an orange, he would merely say." er an crange, he would merely say, 'I give you this orange. In the hands of a conveyancing lawyer and put take writing, it would be. I hereby give, grant and convey to you all and singular my estate and interest, right, title, claim and allvantage of, and in, the said orange, together with all its rind skin, juice, pulp and pips, and all right to hith, cut, much and otherwise. wise eat the same, or give the same away, as fully and effectually as I, the said A. Minard's Liniment Curse Dandruff.

There is nothing mysterious about the modern heating plant. It is simply a fire enclosed so that the heat can be inducted to different parts of the building as wanted. The heat can be conducted because both hot air and hot water will rise if given the oppor-'unity. Neither can fravel downwards unless pressure is used, so that the necessity of a continuous upward flow in fundamental

is fundamental.

If you are not getting the proper heat, do not blame the coal, the furnace nor the firemen until you have actually determined which is at fault. It is natural to some that most heaters are installed large enough for their work, provided they are properly fired. With the average heater the trouble is usually local.

The first executal is eleminess. To get the most heat from the least amount of coal, the heater must be

control character, furnace and a see that they are in-good repair clear; that fire, school and clear-looks are tight when closed; that toggine fire tight to furnace, and at inserted too far into the chimon air leaks into the furnace or Trivial cracks may be

All heat pipes in the effiar should thoroughly and completely wrapped it askectos or other non-conducting satural to prevent loss of heat. Your st water or steam boiler should have good covering of asbestos plaster or

There is not much use in trying to not a building when, through ill-fitting windows or doors, a great part of the heat escapes or an undue proportion of cold enters. Storm doors and windows, weather strips and such pre-ventative devices will lessen the ount of coal consumed. The place most likely to be neglected in this respect is the basement. A cold base ment means a cold house, and seriinterferes with the heating appa. ratus. Cellar windows should be thoroughly gone over, and all unnecessary openings stopped.

THE STRAIN ON OUR EYES.

Modern Conditions, Not Poorer Vision Recessitate Glasses.

The question, "Are our eyes weaker-" is frequently asked by people who observe closely and who are dismayed by the remarkably large number of people who wear glasses to-day as compared who wear glasses to-day as compared with a generation or so ago. Our eyes are not degenerating. The eyes of the nessenr generation are in he wise poorer. weaker or inferior to those of our ancestors, notwithstanding the fact that a lar greater percentage wear glasses then formerly.

ancestora notwithstanding the fact that a sar greater percentage wear glasses than formerly.

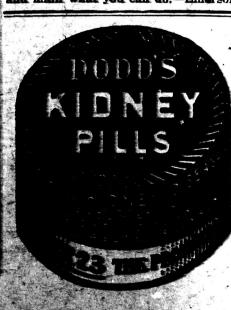

The propagations are that the eyes of the human race are neither weaker nor stronger to day than were those of our forefathers, unless it can be proved that the whole physique of the race to-day is weaker or stronger. As is the whole physical body, so are the eyes.

But much more is required of our eyes now than was ever required of our ancestors. The strenuous struggle for existence to-day, the ever increasing complexity of our modern civilized life, the multiplying knowledge of the world in all lines of human endeavor, knowledge that must be mastered if we would rise and schive success, put far greater strain on the eyes of this generation than on those that have some before.

Our schools are far more exacting and severe, the business and scientific world remaine closer application and more painstalling care than ever before. Electricity has turned night into day, and much more work in now done by artificial filumination than in the past. Sharp competition in every line makes it necessary to have the best vision obtainable.

Because of these exacting demands on our eyes, latent, imperfections, errors of propagations, enuiting eye strait; are brought out and made manifest by sympour even latent, imperfections, errors of refractions, causing eye strairs, are brought out and made manifest by symptoms of discomfort and distress, compel? line us to seek the improvement of vission and the comfort afforded by properse fitting lenses.—Journal of the American Medical Association.

The manly part is to do with might and main what you can do.—Emerson.

EATURE'S LIGHTS.

Mystery of Glow-worm, Australian Poppy, and Others.

The lightning bug's mystery of light thout heat is now alleged to be part

ly solved. A member of that earnest bended colony of scientists at Woods Hole. Mass., has recently declared that the bug does its interior and ext. Fior il-lumination by eating certain substances which supply it with phosporous. It is to be hoped that this is true so We may quit worrying about why the lightning bug is lit up.
Although the lightning bug is our most papular and common pryotechnic insect there are many other insects and many terms of vegetable life which share in light-giving power of higher and low degree. Under certain conditions nasturtiums, dahlias, tube-roses and yellow likes may be seen to glow with a bright sturtiums, dahlias, tube-roses and yellow lilies may be seen to glow with a bright radiance, varying in color and intensity. Only those flowers that have an abundance of yellow or orange shades exhibit this phosphoresence. The best time to see the light is after dark, when the atmosphere is clear and dry. The light is sometimes steady, but often intermittent and flashing.

tent and flashing.

Often, in the early fall, the ground will, be illuminated by the glow from the dead leaves. The Australian poppy is the most remarkable of all the luminous pants for it has been found to send out a light of its own of quite notable brilliancy.

Mushrooms growing on decayed wood often have a degree of brilliancy that, when they are placed on a newspaper, will enable one to read the words in their vicinity with no other light. One species of mushroom in Australia, sixteen inches in diameter, was of such brilliancy that, when seen from a distance, its light frightened the natives.—Chicago "Tribune."

Catarrh Cannot Be Cured

With LOCAL APPLICATIONS, as they cannot reach the seat of the disease Catarrh is a local disease, greatly influenced by constitutional conditions, and in order to cure it you must take an in-ternal remedy. Hall's Catarrh Medicine is taken internally and acts through the blood on the mucous surfaces of the system. Hall's Catarrh Medicine was pre-scribed by one of the best physicians in this country for years. It is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in Hall's Catarrh Medicine is what produces such wonderful results in catarrhal conditions. Send for testimon F. J. CHENEY & CO., Props., Toledo, O.

WEIRD FIGHTING.

African Tribes Entrench Themselves in Bowels of the Earth.

English soldiers tell stories of weird underground fighting against the Baggara, or cattle-owning tribes of the Soudan, the remnants of those fierce warriors who formed the main fighting strength of the Dervishes. These savage tribesmen hide themselves when pursued, with their cattle and other belongings, in great burrowings that are described as "vast rabbit warrens. At southern Kordofan is the coun-

try of the Nubas, remnants of the original negro inhabitants of the country, who have been driven into the isolated rocky hills, rising 2,000 or 3,000 feet above the swamps and

In these mountain fastnesses honeycombed with caves, this strange race builds its villages, grows its corn

HOW'S THIS FOR CORNS? LIFTS 'EM OUT QUICK

You can peel your corns off, lift them out by the roots, do it without pain and quickly, too, if you first apply a few drops of Putnam's Corn Extractor. Putnam's shrivels up the corn, makes it look like dead skin, uproots it completely. The beauty about Putnam's Extractor is this-it acts without pain-does its work quickly and costs but a quarter in any drug store in the land. Get it to-day.

The Beer of Borneo.

Beer as made by the natives of Sarawark, in the northwestern region of Borneo, varies in its ingredients according to the different tribes who make it, the most intoxicating being that made by the Bisaiyahs of Limbank. These people make their beer by boiling rice, adding yeast, crushed wild chili, and a large lump of wood ash. This is all put into a jar till the jar is two-thirds full, and covered over with leaves which are held down with bamboo supports; water is poured on till the jar is full, and the beer is then ready for drinking. The drinking is performed by pushing bamboo tubes down to the bottom of the jar and then sucking up the liquid. So that no one shall have more than his fair proportion at a time, a system of floats is arranged whereby the amount of drink consumed by each man is registered.

Labor is high, and the laborer is worthy of his higher.

ODD TREASURE-TROVES.

Strange Finds of Gold and Gems in Unlikely Places.

recombed with caves, this strange race builds its villages, grows its corn and tends its herds of sheep, cattle and goats. Generally speaking, they are peaceable enough, but some of the clains have an evil reputation of raiding the neighboring Arabs, murdering isolated parties that may happe to stray too near, or carrying off-their women. The tribesmen invariably retire, with the greater part of their personal property and live stock, to the bowels of the carth, whence they maintain a hot fire on any troops who may happen to come within range of their Sniders or Remingtons.

The unsatisfactory nature of this fighting may be understood if the reader can imagine himself walking over a vast rabbit warren composed of, enormous bowlders piled to a height of 1,000 feet or 2,000 feet and covering several miles in area, with an invisible enemy heneath him whose whereabouts it is impossible to ascertain.

Officers naturally hesitated to engage in underground warfare in labyrinths where whole battalions might be swallowed up, and where all the advantage lay with the enemy. Latterly, however, the problem has been tackled in a systematic manner by the camel corps and in recent expeditions extensive cave-clearing operations have been carried out.

Parties proceeded by torch-bearers have explored these recesses with great success, and though some loss has been sustained, the Nubas now know that their immunity is gone, and that the arm of the government is able to reach them.
