BLIND LILLIAR ISTS

P.P.C.L.I. Veteran Plays a Good Game.

Sergt. Shawl, of the Princess Pats, a blinded Canadian soldier, played a billiard match in London lately against a man who saw, and scored 62 points in one hour and forty min-

The sergeant lost his sight in the student in St. Dunstan's Hostel for the Blind in Regents Park, London, where as is taking re-educational courses to fit him for civil life. Through the arrangement of the Military Hospital Commission in Canada all Canadian soldiers who suffer injuries causing them to lose their sight are sent here to be trained. The number so far has been 32 in all.

Sports and all phases of activity are adapted for the men who do not see, but must develop their remaining faculties to take the place of sight. The degree to which these faculties can be developed is proving marvelous.

Sergt. Shawl's performance was little short of miraculous. Although he advanced his hand to locate the exact place of the balls only two or three times did he actually touch them. He declared that he could sense them, just as one in a dark room could tell by the "feel" on his face that he was close to a wall. He described it as a feeling of coldness. His highest break

In the treaches, because of his prowwith the cue he was known as "Leicester Square" after one of the world's of billiards. He has just been and will take up pouncy Merfolk when he finishes his course at St. Dunstan's,

mard's Liniment Cures Garget In

CETY OF THE FUTURE.

Vision of Change That May Come Through Motorcar.

Segregation of traffic was practically unknown before 1900. When the motorcar came it was obvious enough that the eight-mile-an-hour truck and the twenty-miles-an-hour pleasure car could not simultaneously run on the same densely packed avenue. Not the fastest, but the slowest, vehicle determines the speed of a congested street's traffic. This conclusion then is justifled: In the city of the future there will be separate streets for the fast pleasure or passenger motorcar and for the slow commercial motor truck. Moreover, trucks are increasing in

weight so that ordinary pavements cannot support the heaviest that can be built. It is very evident that the city must provide one type of street for the fast pleasure car and still another for the heavier, slower truck. New York, Philadelphia, Boston, London, Paris and Berlin have found subways preferable to elevated structures for rapid transit railways for very much the same reasons that confront us even now with the increas.

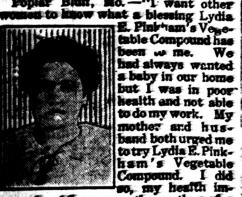

fue use of the motofcar, and we may expect that motortruck subways will be arovided in the congested city of the future. There are straws enough

MOTHERHOOD WOMAN'S JOY

Suggestions to Childless Women.

Among the virtues of Lydis E. Finkham's Vegetable Compound is the shifty to correct sterility in the cases of many women. This fact is well established as evidenced by the following latter and fundwards following letter and hundreds of others we have published in these colums.

Foplar Bluff, Mo.—"I want other

wed and I am now the mother of a beby girl and do all my own house at. "- Mrs. ALLIA B. TIMMONS, 216 d St., Poplar Bluff, Mo.

my other homes, once childless,

me now children because of the

st Ledie E. Finkhum's Vegetable

makes women normal,

to show that this is the tendency of thought among municipal engineers. It becomes safe to prophesy that the city of the future will provide highways for its heavy motor trucks deep in the ground. Swift passenger motors will speed along in the sunshine un-

obstructed and undelayed.

So the city of the future, the city that the motorcar will bring into being, will be pleasantly different from that compact aggregation of towering office buildings and dwellings painted by remaneers. It will be an open, from its commercial centre; its suburbs, if suburbs they can be called. sixty or a hundred miles distant and easily reached by trains perhaps twice as fast as those which now convey us to our work. There will be no slums in that motor city, for slums are created by high land values, which cannot be levelled so long as this is a horse-ruled world. The home build ing instinct, an instinct as natural as the nest building instinct of a mated bird, will be easily sat!sfled. That follows from the more equable distribution of land values which the motorear will bring about and from the ease with which a man may journey from his house to his office or to a distant railway station.

And with that change there will be satisfied the craving for the open air, for trees and flowers, for starlight and moonshine, for outdoor games and the full enjoyment of nature. Only in the heart of the city itself will there remain in subways for trains and motor trucks a reminder of the life we now lead. And even there the spacious public squares and the fine. second battle of Ypres and is now a smooth, wide street, necessitated by many paralleled streams of speeding cars, will faintly recall the constructed city passageways of the present .-Waldemar Kaempffert in McClure's Magazine.

KEEP LITTLE ONES WELL IN WINTER

Winter is a dangerous season for the little ones. The days are so change-able—one bright, the next cold and stormy, that the mother is afraid to take the children out for the fresh air and exercise they need so much. In consequence they are often cooped up in overheated, badly ventilated rooms and are soon seized with colds or grippe. What is needed to keep the little ones well is Baby's Own Tablets. They will regulate the stomach and bewels and drive out colds and by their use the baby will be able to get over the winter season in perfect safe-The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

CARVED JADE.

It Takes Chinese Patience to Work This Hard Oriental Stone.

in any big city you are almost sure to see rings or necklaces or bracelets that I have never used any equal to cal Survey. which are pretty, clear green in color and are made out of jade. If you ask the shopman to tell you something about jade he will answer that the true jade is seldom found outside of hours. It is also the best for bruises, Asia and Oceanica, but that in these sprains, etc. parts of the world it is to be had in considerable quantities.

You, of course, know that a diamond is so hard that it will scratch glass. but perhaps you have not heard that iade is also extremely tough and will cut glass and quartz. Because of its great hardness the man who carves it must possess vast patience, and persistence to carve designs in jade.

The Chinese make numberless articles out of jade-paper weights, handles for swords, belts, bangles, rings. vases, cups, plates, pendants and so

Jade is far from cheap to buy. Nowadays fine pieces of jade are just as much valued among collectors as are fine paintings for their great beauty and artistic value. So, then, if some one gives you a little pendant of carv ed jade, you will understand that you have a present which not only would be valued highly to-day, but one which many peoples in all times would have treasured.-Christian Science Monitor.

Minard's Liniment Cures Colds, Etc.

THE SUPPLY OF FEEDING STUFFS

Food Contro! Warns Great Shortage

And Advises as to Course to Pursue.

In order to prevent retail dealers taking advantage of the scarcity of bran and shorts to exact excessive profits over the prices fixed by the Food Controller, the latter has ordered that the retail price of bran and shorts. where cash is paid, must not exceed by more than ten cents per bag the cost f. o. b. track at the dealer's station. In cases where purchasers take delivery direct from the car the profit has been limited to a maximum of five cents per bag. An extra charge may be made where credit is given and the bran and saorts delivered from the dealer's store, but this amount must be only a reasonable charge, repreenting the consideration of such services. When the miller sells at the mill in less than carload lots, he is not permitted to add more than five cents per bag of 100 pounds to the price at which he is permitted to sell under the Food Controller's order of Dec. 17, 1917. When the purchaser brings bags to the mill 'to be refilled, the miller must not sed more than \$2 per ton to the price at which he is permitted to sell under the order of Bec. 17. In

Men wanted everywhere, no matter how large the city or how small the village, to show samples for large Grocery Corporation (capital \$5,000.00). All

per ton as retail charge. For example, porous rock, though minute, have an suppose that at a point in Eastern aggregate volume or capacity of mil-Canada the freight from Fort William lions of cubic feet. is \$4.20 per ton. In this case the sellers and dealers in Canada.

stuffs. Prices for live stock are such to food animals.

troller's office says that, if the price of bran and shorts had not been fixed, are comparatively cheap; the supply has not been increased thereby.

The present total daily production Canada is only 84 cars, and the supplies of wheat will not enable even this rate of production to be maintained for the balance of the crop year. The total bran and shorts produced in Canada if divided among all the farm live stock in Canada would only give one meal in three capacity daily manufactures less than two tons of bran and shorts per day, which means that a single carload will

only be produced every two weeks. The Food Controller has taken measures to reserve for the farmers of the Dominion all by-products of grain elevators that are available for stock feed and also feed-wheat, bran and shorts, all such mill feeds. Applications for licenses to export 6,640 tons of bran, shorts and mill feeds have been refused. Indeed, the saving has been very much greater because the mills were definitly informd that licenses would not be issued for the exportation of such products. Feed wheat has all been retained in Canada, and more than 2,850 tons of screenings have also been saved from ex-

J. G. LESLIE. Dartmouth.

port. Arrangements have been made which will keep the exportation of oats, barley and other feels to a minimum, except for shipments overseas by the allied nations.

The Food Controller has been in constant communication with the authorities at Washington with a view to expediting shipments of corn into this country for feeding purposes. Arrangements have been made for its entry as soon as means of transportation have been provided. The American corn crop is the greatest in the history of that country, but the car shortage. combined with the fact that much of the corn is wet and cannot be shelled until it has had a long period of seasoning, has kept supplies from the market. At least until it is available. farmers are advised to use domestic coarse grains for live stock, and also to make use of whatever quantities of cottonseed meal, oil cake and giuten meal, and mixed feeds are obtainable.

FOSSIL OCEANS.

The Drill Occasionally Strikes Them at Great Depths.

Among the many unsolved mysteries concerning the interior of Mother sarti. tew are more fascinating than mose brought to light by certain surprising experiences of drillers of deep wells. Although many people are not ware or the lact, a large proportion of the wells sunk to depths below 1,000 eet encounter large podies of salt water, the flow of which may be so great mat the driller remarks that he has struck the Gulf of Mexico or some other immense body of salt water. The salt water may even flow out of the well, but more commonly it rises in the well to a height of several hunired feet above the bottom, and its supply is so great that only a pump of enormous capacity can keep the well empty. Where does this salt water

Cause of Early Old Age

ated Dr. Mich an authority on early old age, crated in the int properly it is absorbed withou ter. Poi ours bring on early old agr and "Stiget's Sgrap" after m

effect, the miller must not charge come from? It is often assumed that more than the fixed Fort William bulk it fills some immense cavity or system sunny city, its outskirts thirty miles prices, plus or minus freight to or of crevices, but in fact it is generally from Fort William, and in addition 22 contained in some bed of unusually

But one question is no sooner aning price for bran per ton when the swered than another one, more diffipurchaser supplies the bags would be cult, arises, and the question now is. \$24.50, plus \$4.20, plus \$2, a total of How did this salt water get into the \$30.70. The order applies to all mill- porous rock? Has rain water soaked far down in the earth and found some While this action has been taken in bed of rock sait which it dissolved and order to render available to the farmer thereby become salty; or had the salt all supplies of bran and shorts at the water some source far within the lowest possible cost, the amount ob- earth, from which it had arisen totainable is very limited, and farmers ward the surface or is it the water of must depend mainly upon their feeding some ancient ocean that filled the pores of the sand and mud of its beu, that, despite the high cost of coarse which in ages gone by became buried grains, it is profitable to feed them under sand and mud that gradually accumulated on the ocean bottom? The statement from the Food Con- The shells of sea animals found in limestones and other hard rocks at the heart of the continent show clearly these products would have risen in that the ocean, in some one or several price to an amount representing their remote ages, covered a large part of feeding value compared with other the country, and it appears extremely grains and feeds. But the fixing of probable that the salt water found in the price has only ensured that in so the deep wells is really fossil sea wafar as these feeds are available, they ter entombed in the sands of mude of surface cons and now brought to the surface by the drill, which in innumerable piaces in this and other countries of bran and shorts by all the mills in is being sunk to depths of two, three, and four thousand feet, and even down to depths of nearly 7,500 feet, a depth reached by a very deep well which is still being drilled at a place a little

This sait water seems to be found especially in oil fields, but it has been struck by the drill at many other weeks. A flour mill of 100 barrels places, as, for example, near Lavenworth, Kan., where enormous quantities of salt water are found at various depths below the surface. Although no valuable pools of oil or gas have been found in that region, numerous beds of coal under it. In one boring four beds of coal aggregating ower eight feet in thickness and numerous thinner beds having an additional total thickness of six feet were found. In the region also many outcropping layers of rock contain remains or marine shells, and the entire region was no doubt once covered by the sen. Indeed, the geologist has been able to decipher in the rocks numerous details of the record of the advance and retreat of the sea and has been able to establish the fact that the region was submerged at several different times. These and other geologic features of the region near Leavenworth, Kans., and east of it, in Missourf, including its mineral resources. for a short time and then wash in Sirs,-I have used your MINARD'S are described in a folio of the "Geolo- pure water. LIVING IN JAPAN.

Hard Work for the Middle Classes to Make Both Ends Meet.

Dr. Takata, Japanese minister of education, has recently published a book concerning economic conditions in Japan. The pinch comes harder upon the middle classes than upon the lower classes since the former must not only live, but must keep un a respectable appearance on salaries no greater than those that men who work at trades receive. For example, according to Dr. Taka-

ta, a primary school teacher earns \$15.50 a month, but his lowest budget for a family of four reaches \$17.33. His wife must do work at home to earn the deficit. A magazine editor and writter who has a wife, two children and a maid spends \$32.75 monthly on household sundries. His earnings are irregular, but always below his expenses. He has been compelled to borrow money from his wife's relatives, and her trousseau is not unknown to the pawnshops.

ONE TOUCH OF PUTNAM'S STUPS CORN SORENESS

No need to walk on the edge of your soles to save a sore corn-Putnam's brings instant relief. Apply it to a tender corn, and watch that corn shrivel and dry up. Absolutely painless. No matter how tough the corn is, you can peel it right off by using Putnam's Painless Corn Extractor. Costs but a quarter-why pay more for something not so good. Get Putnam's to-day.

A NAVAL SECRET.

How England Cloaked the Building of a New Type of Cruiser.

In Europe extraordinary precautions are taken by all the great powers to mask their military plans, and . constant efforts are made to ferret out the military designs of opposing governments. Admiral William S. Simes of the United States navy threw an interesting sidelight on this phase of preparedness when testifying before the house committee.

"To show the extreme importance of this matter of a new type," said Admiral Simes. "when Great Britain first built these vessels (swift and powerful battle cruisers) extraordinary precautions were taken to prevent her possible enemies learning their characteristics. Great Britain had a number of armored cruisers. and Germany had a number of them. Great Britain knew that if she could build a number of these battle cruison that had battleship guns and westy-eight knot speed in other west, more speed than any other walsens in the world and gams stron-the those of any other cruisers

-she would thus be away shead for

s long time.
"She laid down three of those vesarmored cruisers, and everybody in the world supposed that simply three train for nurses. Apply, Weilandra more armored cruisers would come out, with ordinary guns, which are

course, while the vessel is building ford, Ont. but it was wholly impossible to comreal the fact that they were building ewenty-four twelve-inch guns that could not otherwise be accounted for. Great Britain did not want other nations to know that these were going to be carried by these three cruisers. So they induced Turkey to sign a contract for those guns, and a certain foreign attache in London paid not less than £14,000, or \$70,000, to officials of the companies to get to look at their books and assure himself that the guns were being built for Turkey. Of course they pestered Turkey to find out what she wanted with twenty-four twelve inch guns, but in the meantime the vessels were completed and the guns mounted before foreign nations knew that a radically new type of vessel was in existence

"The British wanted to get that type out because in any conflict with another navy that did not have similar vessels the British would have a great advantage. Their scouting power was so great and their powers of destruction so great that anything except a battleship was practically helpless before them."

Minard's Liniment Cures Distempter. Worth Remembering.

When cooking apples add a pinch

of sait. This makes them tender and improves the flavor. A pinch of sugar dropped into the

tea when it is set to steep will cause the leaves to open in about half the time. It pays to keep cheap white dishes to use in the refrigerator.

You can save and use again benzine or gasoline you have used for cleaning. Simply put it in a glass jar and let it settle and pour off the top. Sift the baby's oatmeal through a flour sifter and it will be much

smoother and more satisfactory. When whipping cream try adding strained honey instead of sugar. not only gives the cream a delightful

flavor but it causes it to remain firm much longer. Grease the cup with which you measure molasses and every drop of

molasses will come out. Every/bathroom should have a clock in it as a gentle reminder to each occupant/not to waste time.

If flannels have become yellow with age, 1 1-2 pounds of white soap powder should be dissolved in 12 gallons of soft water, to which should be added 2-3 ounce of spirits of ammonia. Place articles in this solution, stir well

tle or any glass that is too small to insert the hand into, put into the bottle a quantity of tea leaves, pour in about one-third of a cupful of vinegar, shake well, empty and rinse with cold water.

RELIEF AT LAST

want to help you if you are suffering from bleeding, itching, blind or protruding Piles. I can tell you how, in your own home and without anyone's assistance, you can apply the best of all treatments.

PILES TREATED AT HOME

I promise to send you a FREE trial of the new absorption treatment and references from your own locality if you will but write and ask. I assure you of immediate relief. Send no money but tell others of this offer.
