WHAT GERMAN "FREEDOM OF THE SEAS" REALLY MEANS

(New York Sun.)

The phrase "freedom of the seas" has been a favorite location with Germans since they began the war against civilization. They have sought to picture England as a brutal and despotic ruler of the great waters, restricting and confining other nations in their use of the oceans. The attempt has not been a success; the existence and prosperity of a tremendous German merchant fleet have been too obvious a refutation of the charges of British discrimination to be concealed. It has been apparent that when a German statesman talked of "freedom of the seas" he meant freedom for Germany and for nobody else. But the truth has not been acknowledged by Germany's spokesmen, for good and sufficient reasons.

It is interesting therefore to find the facts of German purpose bluntly declared on respectable German authority, by Professor Ehrenberg, in the *Vossische Zeitung*. Not the oceans open to all on terms of exact equality, which has been the situation for years but the oceans a series of German lakes is the object of the war on its naval side. He writes:

"The victory at Constantinople (the alliance with Turkey) is the first step toward a naval victory. Thanks to that victory we have leaped across England's power in the Mediterranean, and thus we have become a naval power, thanks to a victory on the land. We must go on in the same direction, and there shines clearly before us our last object for the attainment of the freedom of the seas—the domination of the Suez Canal.

"By the possession of the Suez Canal we would have in our hands the core of the British Empire, and the latter would thus be deprived of its poisonous tooth. And we would in

St. Isidore, P. Q., Aug. 13, 1904.

MINARD'S Liniment Co., frequently used GENTLEMAN—I have frequently used MINARD'S LINIMENT and also prescribe it for my patients always with the most gratifying results, and I consider it the best all-round Liniment extant.

Yours truly,
DR. JOSEPH AUG. SIROIS

In this manner become the rulers of the bridge to the second great part of the world and the neighbors of the Indian Ocean; we would get out of the Middle European press—the moist triangle; we would not care what is going on in the Atlantic.

"Egypt must be our aim; and if we cannot reach it right now we must get to it as closely as possible; this means that we must add to our Constantinople naval victory further victories; we must capture the Suez Canal and hold it for a victory in our future naval and colonial war."

In this conception of freedom of the seas there is no passage indicative of liberty, equal rights or common privileges. The keynote of the whole is domination; German domination, "capture" of Suez for "victory in the future naval and colonial war." The British Empire must be "deprived of its poisonous tooth"; the poison, apparently, so far as the seas are concerned, finding its expression in a policy that made profitable the building and operation of splendid armories for world-wide trade by every nation in the world that cared to embark in such enterprises. Germany herself was one of the greatest beneficiaries from the operation of this policy. Had Great Britain's leadership in shipping been founded on curtailment of the opportunities of other nations, no such fleet of carriers as that which flew the red and white and black of the German Empire before the Kaiser challenged the world could have come into being.

In this as in other things attributing words from German tongues mean only selfish German projects thinly veiled or temporarily hidden. German "freedom of the seas" connotes German seas, wherein to all whose presence does not fit German designs or serve German ambition.

It is fine for cleaning cans—says the dairyman

Comfort Lye

Scientific Jottings.

High prices paid for old rails, scrap iron and steel, etc., were a contributing factor in the abandonment by railroads of the United States of 942 miles of track in 1917.

A motor car designed for physicians is equipped for use as an ambulance in case of emergency.

The consumption of rabbits is greatly increasing, owing to the scarcity of other meat. Incidentally the country is being rid of a crop-destroying pest.

By-product cooking doubled its capacity in the last three years in the United States.

The discarded shoes of the English soldiers are carefully saved and the pieces of leather utilized in hundreds of ways and what is left is made up into a patent street-paving material.

Before the war 90 per cent. of the artificial colors and dyes were imported, five or six concerns with 400 operatives producing 3,300 short tons per year. Now there are over 90 enterprises, each making crude and intermediate.

A socket wrench mounted on a motor suddenly came to the attention of the automobile and similar work.

GUARD BABY'S HEALTH IN THE SUMMER

The summer months are the most dangerous to children. The complaints of that season, which are cholera infantum, colic, diarrhoea and dysentery come on so quickly that often a little life is beyond aid before the mother realizes he is ill. The mother must be on her guard to prevent these troubles, or if they do come to suddenly to cure them. No other medicine is of such aid to mothers during the hot weather as is Baby's Own Tablets. They regulate the stomach and bowels and are absolutely safe. Sold by all medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Worth Remembering.

When preparing a chicken, try rubbing the inside with a piece of lemon and you will find it very good, as it whitens the flesh and makes it more tender.

To keep a chimney free of soot, occasionally sprinkle a little saltpetre over the fire. Teaspoonful is enough.

Always sew buttonholes shut before washing a sweater or any other wool garment where buttonholes are liable to stretch.

Grease stain on leather may be removed with benzine. Wash the spot afterwards with beaten white of an egg.

To remove fingermarks from white enamel, rub with a moist cloth dipped in whiting.

A colored or faded blouse may be bleached white by boiling in cream of tartar solution.

Equal parts of turpentine and ammonia will remove paint.

To resort color taken out by acid use ammonia (sal volatile, or bary carbide); drop on the faded spot.

When travelling dip the tops of corked bottles in hot paraffine before packing them and the contents will never spill or leak out.

Use benzine or gasoline for cleaning purposes only during the daytime—and in the open air or in a well-ventilated room containing no open flame.

Minard's Liniment Relieves Neuralgia

Our Other Selves.

The old Hebrew sages declared: "Wisdom cometh from the opportunity of leisure." It does not mean that a wise man must belong to what we call the leisure classes. It means that if he has only a little free time at his disposal, he must use that time for the refreshment of his hidden selves, says S. M. Crothers in the Atlantic.

If he cannot have a Sabbath rest of hours, he must learn to sanctify little Sabbaths, it may be of 10 minutes' length. In them he shall do no manner of work. It is not enough that the self that works and receives wages shall be recognized and protected; the work must be made safe of our other selves. Does not the Declaration of Independence say that every man has an inalienable right to the pursuit of happiness?

A MESSAGE TO WOMEN!!

I let a woman ease your suffering. I want you to write, and let me tell you of a simple method of home treatment, send you ten days' free trial, post-paid, and put you in touch with women in Canada who will gladly tell what my method has done for them.

If you are troubled with weak, tired, nervous, headache, backache, neuralgia, constipation, catarrh, indigestion, pain in the sides, regularly or irregularly, missing, sense of falling or tribulation, nervousness, desire to cry, palpitation, hot flashes, dark rings under the eyes, or a loss of interest in life, write to me today.

Dr. H. S. Crothers, Dr. S. W. Fisher, Ont.

Blind Best Watch Repairers.

Blind people—those who have been born blind—are, as well known exceedingly clever with their fingers, but it is not often that one hears of a watchmaker who was born blind, and yet there have been instances of the kind.

One such blind watchmaker lived at Holbeach. His name was Rippin, and although completely blind, he could take to pieces and put together any watches of most delicate construction with the greatest ease and in quicker time than most watchmakers who have the advantage of good eyesight.

On one occasion some of the tiny wheels and screws used in the trade were stolen from him, but the thief was captured with the property on his person, and Rippin identified it by his delicate sense of touch. Another watch and clockmaker brought up his blind son to the trade, and he proved so skillful that on more than one occasion he detected faults in timepieces which other tradesmen had failed to discover.

To Brighten Wood.

Don't use soap and water on your kitchen woodwork if it is varnished. A solution of kerosene and water may be "smelly" for a little while, but it brightens up the natural wood wonderfully.

Drawiness After Lunch

Is anything more annoying than the resistless desire for sleep that comes over one during the hour or two that follows luncheon? It is no respecter of business or social exigencies, nor of time or place.

The remedy for these attacks is not to be found in a vest-pocket apothecary's shop, in the lower drawer of your desk, nor in the medicinal cabinet at home. The best of all things is to take a brisk turn around the block in the cold, crisp air. There is a good reason for this. The nerves that have the control of certain terminals in well defined parts of the body's surface. By briskly applying cold to these places we can stimulate the organs connected with these nerves.

Thus the brain is connected with a number of such areas—as for instance, the face and forehead, the palms of the hands, and the feet. If we suddenly emerge from a hot office into the cold street, a stimulation of the nerves which end in the face passes along to the brain and thus breaks the desire to sleep.

If you cannot afford the time for a walk, wash your face and hands briefly in water as cold as you can get it and in drying rub vigorously in order to set up a good reaction.

Washing the hands and face in very hot water, as hot as you can stand will have the same effect. This is less pleasurable treatment than the cold water, because the reaction which follows the drying does not produce the same feeling.—Exchange.

PLANT DEFENSE.

Nature's Weapons Against Browning Animals.

The keen competition in commercial circles, even in these strenuous days, is as nothing beside that of many plants and trees for bare existence. Their entire lives from the time they form in the parent seedpod, are beset with peril, for nature is as much mistress of destruction as of creation.

Every plant growing in a wild state has something to combat against. It may be the war waged against it by plants of other species, or it may be the likelihood of being devoured by animal or insect.

This is particularly evident in the case of the garden plant, which, in its natural state, carries long, sharp thorns, as a protection against the browsing animals.

Thorns, spikes, spines and stiff bristly growths are the most common forms of plant defence. There are many plants that have spines only when young, shedding these weapons of defence when old enough and sufficiently strong to exist without them. Other plants, again, carry their spikes, or spines on the under part of the leaves, or spines on the under part of the leaves, to ward off creeping foes, such as slugs.

The most terrible plant defence of all is that of the wreath of thorns, a creeper that flourishes in the dense jungles of South America. A horse or man struggling through such a jungle, if so unfortunate as to come in contact with this creeper, will rapidly be enfolded with the sinuous lengths, from the clutches of which it is impossible to get free without assistance. The more the victim struggles, the tighter he is held; and this plant can be best described as a series of springs, the tightening of one coil affecting all the others.

But often the more subtle methods of defence prove of greater interest than the apparent ones. It is a well known fact that animals dislike drinking water that has lain in the bowl-like leaves of certain plants, such as rhubarb and the vegetable marrow, and this is merely an unlooked-for scheme of defence.

Other plants, again, ensure their immunity from attack by the indigestibility of their leaves. The rhododendron, for example, has stringy, tough leaves, that must be the reverse of palatable, even to the most goat-like animal. The most familiar laurel is distinctly unpalatable as a dish; and if a moth were placed in an airtight box with some crushed laurel leaves, the poisonous fumes would kill the insect.

The problem of poison is no a hard one to solve, and enters very largely into the plan of plant defence. It is obviously harmful for the bark to be bitten from trees, hence on many varieties grows a moss fatal to browsing animals.

Yet another form of plant defence is that of odor. In the majority of cases warning of poison is given to animals by odor.—Oakland Tribune.

SMOKE TIGHT T&B PLUG

Horses Loyal to Cavalry.

Displaying almost human instinct, 100 horses turned over to the remount station by the First New York cavalry when that organization was transferred into machine-gun companies, demonstrated their disapproval of the reorganization by stampeding, relates the Brooklyn Eagle. The horses paid no attention to military discipline, but broke down the barricade of the remount station and galloped over to the picket line of the First New York cavalry.

Many of the horses took positions in front of the tents of officers and soldiers who have ridden them for years. An alarm was spread and the cavalrymen were compelled to corral their former dumb associates and drive them back to the remount station.

Big Things.

The greatest structure ever raised by the hand of man is the Great Pyramid of Cheops, founded 4,500 years ago, and measuring 746 feet square on the base and 480 feet high. It took 20 years in construction; 100,000 men worked for three months, and being then relieved, were succeeded by an equally large corps. The massive stones were hauled from 700 miles away. The cost of the work is estimated at \$145,000,000.

Appointed Chief Engineer

MR. J. M. R. FAIRBAIN has been appointed chief engineer of the Canadian Pacific Railway, replacing Mr. J. G. Sullivan, chief engineer, who is retiring to enter private practice, is the announcement by special circular issued by Sir George Bury, Vice-President, and approved by Lord Shaughnessy, the President.

Too much credit cannot be accorded Mr. Fairbairn, whose rise has been the result of sterling service rendered the company since he joined them in 1892. Mr. Fairbairn was born in Peterborough 45 years ago. He entered the Toronto University, where he graduated.

Following a short private practice in British Columbia, Mr. Fairbairn joined the Canadian Pacific Railway in June, 1892, in the Engineering Department and became Assistant Engineer at Montreal, August, 1901, and Resident Engineer at Ottawa 12 months later. After three years in the Ottawa Division, he returned to Montreal as Division Engineer, and was transferred to Toronto some months later, from which place he returned to Montreal in November, 1907, in a similar capacity. It was in October, 1903, that Mr. Fairbairn was made Principal Assistant at Montreal, two years later being promoted to Engineer of Maintenance of Way, and in June, 1911, was made Chief Engineer of Eastern Lines, a position he occupied up to the time of his present promotion, which is the highest railway position attainable.

J. M. R. FAIRBAIN.

WANTING RECIPES.

Catarrh biscuits are very good. To make them take 3 ounces medium oatmeal, 2 ounces flour, 2 ounces mashed potato, 1 ounce dripping, a pinch of salt, 1/2 teaspoonful of baking powder and water to mix.

Mix the oatmeal and flour together in a basin, add the baking powder and the salt, and rub in the fat. Next add the potatoes and mix well. Add sufficient water, about a gill, and work to a fairly firm paste. Turn out on to a floured board, roll out 1/4 inch thick.

Cut into round or square biscuit shapes, place them on a greased baking tin, and bake in a moderate oven from 15 to 20 minutes.

Iodine Worth Having.

Always keep a small bottle of iodine in the emergency closet. Paint it into cuts or bruises; it is an excellent antiseptic and hastens healing. Also good for insect bites. For enlarged joints paint every night; relieves the inflammation in three or four nights.

MAKE YOUR OWN BREAD

ALL TELEGRAPHERS

How Jungle Africans Transmit Messages.

The jungle African has no written language. He cannot send letters. He has no telegraph poles or telephone wires. But he has no difficulty in communicating with his neighbors ten, 15 or even 20 miles away.

How does he do it? The African has a drum, a hollowed block of wood from one to three feet in length on which he beats out messages with two wooden sticks.

Is a stranger a white man, on his way to the village beyond the forest? "White man coming. Twelve in caravan," sounds the warning of the drummer—nothing more than the African prototype of our telegraph operator—taps out his news.

No message seems too complicated for the drum code.

Buttons Made From Yeast.

Buttons are now made from the spent yeast which collects in the vats of breweries. It is dyed, grained and pressed into any shape, and it has the great advantage over horn and bone that it grips as in a vise any metal part—a shank, for instance—that is pressed into it.

Why People Feel Depressed in the Cold Weather

Why is tireless and languor so prevalent just now? A physician explained that the cold of winter drives blood from the surface of the body to the liver. Normally one-fourth of the whole blood supply is in the liver, and when more blood is accumulated in that organ everything goes wrong.

No better remedy exists than Dr. Hamilton's Pills, which are composed of such vegetable extracts as Mandrake and Butternut, and possess wonderful liver stimulating powers. Its a marvel the way Hamilton's Pills clear the blood of the poisonous humors. They put new life into worn out bodies, build up the appetite, bring back a reserve of nerve energy, tide folks over the cold days of winter and the depressing days of spring. For your health and body comfort get a 25c box of Dr. Hamilton's Pills to-day.

Calories of the Egg.

The nutritive value is measured in terms of calories. The white of an average egg weighs about 25 grams, consisting of water, proteins and mineral matter. The proteins of the white contribute about 15 calories. The nutritive value of the egg. The white of this same average egg weighs about 15 grams including water, proteins and fat. Its protein furnishes about 8.8 calories from the yolk. Scramble your egg and you will have about 84 calories.

When a man complains that he has one foot in the grave the undertaker shouldn't count his chickens before they are hatched.

How to Make the Sauce—As to Fig Jam.

The best way to make rhubarb sauce is to bake it.

To do this, first peel the stalks and then cut in two-inch pieces. Then spread this on an earthen baking dish and over the rhubarb spread sugar, allowing a pound of sugar to a pound of the rhubarb, if you like it fairly sweet.

Cover with a pie plate and bake in a moderate oven for half hour. Do not let the rhubarb brown on top. If it appears to do this, decrease the heat of the oven.

It is said that in stewing rhubarb, if you scald the stems first and then pour off the first water some of the acidity will be drawn off.
