THERMALY, LAND OF WAR.

#### He History of Its Own but Scene of Many Battles.

Students of the ancient history of will once more discover some for their knowledge in viewing the mpaign near Saloniki. Thesmly, says the Christian Science Moniis the district of Northern Greece fotween Macedonia and the more marely Hellenic section to the south, nd between the hill country of Epirus and the Aeguan Sea, so, at any rate, goographers would describe it. Just twenty years ago, when the Greek croops were flying in disorder across ste plains, hard pressed by the victerious forces of Edhem Pacha, all the world was hearing about Thessaly.

War was doing then what it always does, that is, teaching people geogra-Bir, and such places as Lariesa and such natural features as the Pindus Mountains become household words; while Ossa and Pelion stepped out of the dignity of the classics into the full flare of the modern newspaper.

New to-day, as the French forces. moving down from Saloniki, cross the River Salamvria, enter Larissa and proceed systematically to the occupation of the whole province, attention to drawn once again to this old land amid the world's old lands, Curiously enough, however, although an old land, Thessaly has no really important history, and it has never been the home of a great people. Its history, indeed, is closely connected with its geogra-

The great fertile plain has ever offered a sore temptation to the people of the hills which surrounded it, and ft was justly this fertility which first induced the Thessalians to leave their homes in the hills of Epirus and descend into the rich country which lies. some sixty miles square, between the Pludus in the west and the continuous line of Ossa and Pellon in the east, The Thessalians, in two successive waves, drove the Boetlans and the

T RT a warmen care your suffering. I want you to write, and let me tell you of my simple method of home treatment, even you ten days' free trial, post-said, and put you in touch with weemen in Canada who will indivitelished my method line done for them. tions, bladder weakness, constipation tarrhed ritle weak, tired teliago, brad-nie, backpain in the sides, regu-larly or irregularly, bloating, sense of fallinger ment of internal ornervousness, desire to cry, on, hot flashes, dark rings in life, write to me to-day. Address: fire. M. Summers, Sex S Windoor, Set.

Dorians southward, and settled in the land. That was all in the remote period before Greek civilization has begun to develop. Thessaly next came prominently into notice at that critical period in the history of classical Greece when Xerxes, with his Persian hosts, was threatening the liberties of the great city states of the peninsula. During the years that had intervened the Thessalian had waxed fat. His land was fertile, while its spacious surface presented none of those elevations so ar to the heart of the founder of warlike cities.

There never was in Thessaly any thing like the great democratic city states of Greece's power. It was, on the contrary, the natural home of Sowerful aristocracies, and such famflies as the Alenadae of Larissa, and the Esopadae of Grannon were famous in their time. Thessaly never developed the high patriotism of Greece, and mild but thorough in their action; so, in the time of the Persian wars, do not gripe; are easy and pleasant the Aleuadae of Larissa threw in their to take and are absolutely free from lot with the Persian against their Greek neighbors.

When a common cause did unite the oligarchies of Thessaly the combination was, of course, a powerful one. Such confederations, however, occurred but seldom, and were never lasting. So it went on all through the centuries of the Christian era. Immigrants came to the fertile lands of Themsely from different parts of the Balkans, and the general complexion of its population was different in diferent centuries.

It has always, however, been very largely Greek, and even before 1881. when, in accordance with the terms of the Treaty of Berlin, the district was formally handed over to Greece by the that Greek was everywhere used as tainly done well by Thessaly. Trade has been fostered, and the interior of the country has been opened up by Voto, the only outlet for trade in the le, district, has become a busy place of traffir.

## How Sickiv Women May Get Health

If they could only be made to see that half their ills are caused by impure blood, it wouldn't take long to the world over, recall with mixed feelthem with Dr. Hamilton's Pills.

THE RIFLE BARRES.

Making It Perfectly Straight is a Delicate Operation.

Following the reaming operation in rifle manufacture, which leaves the bore of the barrel smooth and polished, comes one of the most delicate and exacting operations in gunmaking, that of straightening the interior of the barrel. In straightening a barrel everything depends on the skill and experience of the operator, for, aithough machines have been devised to perform this difficult work, they still require skilled men to operate them, and they cannot turn out as much work as is done by hand by the old method that has been practised for years and which can only be acquired. by long experience.

The straightening block has a heavy base, on which are fixed two hardened liv the most striking object to be seen bars of steel set a short distance apart

Had ship's anchor fall on my knee and leg, and knee swelled un and for six days I could not move it or get help. I then started to use MINARD'S LINIMENT and two bottles cured me. PROSPER FERGUSON.

and at an angle with one another. A north window is necessary, where a steady, unobstructed light is had, and the upper half of this window usually

has a large pane of fine ground glass. Across this glass at about the middle is fixed a straightedge of wood. The operator places a barrel on a rest and looks through it at the straightedge on the window, observing the shadow cast by the edge on the polished interior of the bore. This shadow extends about halfway

down the bore, and if the latter is perfectly straight the shadow shows two straight dark lines, one on either side of the bore and slightly below its contre. If, however, there is a crook in the bore the lines of the shadow diverge from a straight line and zigzag in various directions as the operator revolves the barrel by hand. This indicates that there are crocks in the barrel. To correctly (bserve these delicate indications requires unusually perfect sight, and to locate the point and nature of the crook is a matter of long experience and judgment.

When the operator has located a crook he lays the barrel across the bars of his straightening block with the high point of the curve uppermost and strikes it with a heavy hammer made of copper or babbit metal, and great judgment is necessary to know ow hard to strike to remove the crook. This process of observation and straightening is repeated until the two shadow lines are perfectly true for one-half of the length of the barrel and then is repeated for the other half, observations being taken from the opposite end.

Another method of straightening sometimes practiced is by placing in the muzzle of the gun a lens covered with cement, in which a circle is scratched. On looking through the the printing house and the dining hall barrel with a suitable light a series of with its high oak paneling, its pulpit, rings appears in the bore, and the slightest lack of concentricity of these rings indicates a defect. This is said to be an extremely delicate test .-Scientific America

### A Splendid Laxative For the Baby

Baby's Own Tablets are a splendid laxative for the baby. They are injurious drugs. Concerning them Mrs. S. P. Moulton, St. Stephen, N. B., writes: "I have used Baby's Own Tablets for a long time and have found them the most effective laxative I have ever used for the baby." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

REGENT HOUSE

Traditions of University Life in Dublin Surround It.

Regent House, Trinity College, Dublin, where the Irish convention is hold-Ports, but this was so much the case ing its first session, is one of the landmarks of the city of Dublin, atthe official language. Greece has cer. | though only those wno know the Irish: capital weil, and have entered into its life activities, will recognize it by that name. To the casual visitor, Regent House will be remembered as the gateway of Trinity College, the fam.us Palladian facade of which, with its blue cock and its pigeons, faces on to College Green. If the casual visitor to Dublin remembered little else of Trinity, he would surely remember the high, massive iron railings on the low granite wall; the great iron gates swung open, and beyond them the :unnel-ilke gateway leading under Regent House into the cobbie-paved quad-

rangie beyond. Regent House has been the scene of many interesting meetings. Most of the university societies still meet ates, strengthens, renews. Every the Irish convention could not have liton's Pills will improve rapidly, members, in moments of relaxation, College Green lies immediately be-

fiost towards the heights of Cork Hill. Then, on the right, is the subject of the whole matter, namely: the old Irish Houses of Parliament, now occunied by the Bank of Ireland. Quite spart from its momentous presenttime associations this building is easfrom the western windows of Regent House. It was the work of five different architects, and took nearly hundred years to complete; but it is generally recognized as one of the most besutiful one-storey classical buildings in the world. As one writer well says, it is a remarkable combination of "symmetry and picturesque-

As to the general view, from this side of Regent House, it is one of much going and coming. The out-side cars still swing round the front of Trinity, out of Grafton street, or back the other way; whilst all' trams in Dublin seem to find their way sooner or later, through College Green. If, however, one crosses to the other side of the room, and looks out through the windows facing east, the scene is indeed a changed one. In College Green all is the hurry and bustle of a great city. In the famous cobble paved quadrangle of Trinity, which lies behind Regent House, all in academic calm. They say in Dublin that you may always know a Fellow of Trinity by his walk. It is an exaggoration. of course, but, like most exaggerations, it has, in it an element of truth. Certainly those who walk much across the cobblestones of Trinity find there is a certain "nice and mincing step," which gets over the ground most easily.

But to return to the view: It is a grateful view at all times. In summer. however, when the trees are in leaf, and the daisies on the grass patches insist upon showing themselves, lawn mowers or no lawn mowers, it is especially good to see. To the right is the examination hall, with its "Armada" organ and chandelier. and, beyond the famous library one of the four which under the Copyright Act, is entitled to receive a copy of every volume published in the United Kingdom. On the left are the chapel.

## How to Purify the Blood

Extract of Roots, commonly called Mother Seigel's Carative Syrup, may be taken in water with meals and at bedtime, for the cure of indi pation and had blood. Persistence in this treatment will effect a cure in nearly every case." Get the genuine at druggists. <del>isossossossi</del>i

from which once preached the famous Bishop Berkeley: and its long rows of oil paintings of famous Irishmen and benefactors of the college. Directly opposite the gateway, where the cobblestones definitely gave way to the beautiful Campanile, erected, in 1853. by Lord John George Beresford, archbishop of Armagh and chancellor of the university. It is chiefly remembered by Trinity men by reason of the fact that the great bell hung within it is tolled off on examination mornings. Behind the library is the Fellows' Garden, and beyond it the famous College Park. These are not included in the view from Regent House, but it may be ventured that many of the delegates will find their way, now and again, into the park and be invited by the Fellows into their garden. - Christian Science Monitor.

You paint a few drops on the sore corn, and presto, the pain disappears instantly. Putnam's dissolves a sore corn away, makes it shrived up and

WHY IS A CAT'S TAIL

Does It Serve a Useful Purpose. or is It Merely Ornamental?

The question having arisen, "Why does the cat have a tail?" the scientists seem willing to answer it with another question, "How would the cat look without a tail?" No one can gainmy the fact that the tail is a valuable ornament. The cat without one is a sorry sight. But there are those who maintain that the tail serves the cat as a sort of gyroscope, balancing the body in leaping, says the Popular the shrimp industry catch with nets Science Monthly.

This cannot be wholly true, for Many cats get along very well without tails. and rabbits have no use for them at all. Yet both the Manx cats and rabbits do a lot of leaping. After all, it looks as if the tail is only an orns. ment, unless it is a kind of safety valve for expression in exciting times. Of course there are instances where the tail serves some purpose other than that of art. The monkey finds his useful as a sort of fifth leg; the horse uses his as a fly swatter; as does the lion; the crocodile uses his for swimming, as do the seal and turtle and other squatic creatures, and the rattlesnake uses his for warning enemies.

According to W. D. Matthews, of the American Museum of Natural History the tail was a necessary organ for the squatic and amphibious and solds from which the higher animals are descended. When they took to terretrial life and to walking on all fours the tail became more or less super-Juous.

THE SHRIMP INDUSTRY

Catching and Curing of the Fish On Mexico's Pacific Shore

There are some forty or fifty shrimp fisheries along the Pacific shore line within this consular district, with the trading centre of the industry at Mazatian. Most of the shrimp are collected during the rainy season-from July to November-in numerous shallow lagoons along the seashore. They are brought in from the adjacent waters of the Pacific ocean by the currents. It often happens that there are large areas of the sea literally filled with them

All lagoons utilized in catching the shrimp are traversed at the inlet by a dam with two rows of light piling about four feet apart filled in with enough fine brush to prevent the by by remitted a ring make the same of a Why pay more for something not so upon the length of the dam, one or chrimp passing through. Depending more traps of the ordinary style of

obster trap are located at convenient intervals for allowing the shring to enter the lagoon and at the same time for catching them when the fishermen are ready to take them from the water. When they first enter the lagoons from the sea they are usually small, although in some seasons they are large enough for immediate use.

The lagoons produce a weed or grass that grows from the bottom and is known locally as paiste. Immediately upon entering the lagoons the shrimp begin feeding upon this weed so that in seasonable years the average length of the shrimp increases to about 4 1-2 inches.

Unlike the ordinary species of fish, shrimp move with the currents of water in which they are found. Therefore the fishermen watch for the rising of the tide to open the entrances through the dams and the falling of the same to close them.

When the shrimp have reached full growth in the lagoons the fishermen set their traps and again utilize the force of the tide, this time the outgoing one, in making the catch. At each trap, if there are men enough, one man uses a sort of basket fastened to the end of a pole with which to DIGLET CABINET AND WOODEN din the shrimp from the trap and deposit them in a canoe. Generally several cance loads are taken to camp by each man at each tide, making it possible for a few men to gather several tons in a day.

Many of the smaller operators in ranging from 100 to 400 feet in length, either in the lagoons or in shallow water along the open seashore.

When the shrimp season is good, as is usually the case, it is not uncommon for 19 men to catch 20 tons of shrimp in a period of eight hours, using the hand nets. Of course, this success can be attained only on such occasional within the scope of operations.-Consul W. E. Chapman, Mazatlan, Mexico, in U. S. Commerce Re-

THAT DODD'S KIDNEY PILLS CURE RHEUMATISM.

Harold D. Bertram Had Inflammatory Rheumatism and One Box of Dodd's Kidney Pills Cleared It Out of His

Southampton, Cnt., March 11.-(Special.)—That rheumatism is caused by disordered kidneys and that Dodd's Kidney Pills will cure it is again proved by the case of Harold D. Bertram, a young man well and favorably known here. He had inflammatory rheumatism for two menths. Dodd's Kidney Pills cured him. "The doctor said my trouble started

with the grippe," Mr. Bertram states. "My hands and feet were badly swollen and the doctor did not seem to be doing me any good. My grandmother, Mrs. G. Grasser, advised me to take Dodd's Kidney Pills. I took one bex of them and I haven't since. I am clear of the rheumatism.

That Mr. Bertram's trouble came from his kidneys is shown by his other symptoms. He had stiffness in the joints, was tired and nervous, and there were flashes of light before has eyes. He had a dragging sensation across the loins, was always thirsty and felt heavy and sleepy after meals. Rheumatism is caused by urid acid in the blood. Cured kidneys strain the

Cheapened metallurgical processes will uric acid out of the blood, Dodd's Kidney Pills cure the kidneys.

WARTINE SIGNALS.

In view of the varied and scientific signal methods used in modern warfare, a description of the ancient signailing methods found in the writings of Polybius will prove of interest. This writer had observed the opera-

tions of the Roman generals before the fall of carthage in 146 B. C., and says they provided their eignal stations with earthenware vessels, exactly equal in all respects and fitted with cocks which allowed the water to escape at the same rate. They were carefully tested to make sure of the last requirement. Corks of smaller diameter than the vessel were floated in them. bearing rods, upon which were marked at a distance of three fingers apart the simplest and most urgent military messages. They were used as fcliews:

The sending station raised a torch. The receiving station, seeing it, did likewise. This was the signal for both stations to open the corks of their ing station had sunk so that the desired message appeared at the edge of the jar another torch was raised. Increase your egg yield and the receiving station shut off its cork and read the message on the rod. marked identically with that at the sending station.—Detroit Free Press.
