

WERE WILD PLOWERS.

Originally Chrysanthemum Was Common Field Daisy.

The once-despised daisy has become a fashionable flower within recent years, and is now grown in great guantities for market in greenhouses. Likewise, the dandelion is being improved by cultivation, and may yet be developed into a really magnificent flower, goldens yellow, five or six inches in diameter and with petals multiplied in number.

The original chrysanthemum, from which all the superb varieties we know to-day are descended, was, in its wild that are highest or handsomer than a to-day are descended, was, in its wild state, no bigger or handsomer than a daydelion. It is found that the latter grows with astonishing rapidity and luxurance of bloom under cheesecioth

Buttercups of several varities and superior size (the plants being multi-plied by dividing the roots) are now grown in hothouses; likewise yellow and red violets. In late winter there is a great demand for cultivated spring wild flowers, shead of the season; also for panzies, which themselves were wild flowers and unknown to gardens up to

In that year a little girl named Mary Bennet, a daughter of the Earl of Tank-erville, undertook to plant in her garden at Walton-on-Thames every variety of pansy she could find. Hefore long pansy culture became the rage, and even to the present day it is a popular fad in Eurone.

Europe. Hitherto it has not been found prac-Hitherto it has not been found practicable to tame the wild mayflower or training arbutus, but discovery has recently been made of the fact that it will grow luxuriantly in pots if supplied with soil composed of half-rotted cak leaves mixed with 10 per cent, of sand and a liberal quantity of small, broken bits of oid flower-pots for decimants.

Now that this has been ascertained, it is presumable that the much-admired arbutus will be grown before long-in quantities under glass for the late winter market. In the wild state it is almost work of the lateraly to the escential resay rare, owing largely to the eager persistence with which in springtime people seek and pluck the blossoms, or even dig up the plants, thus depriving them of an opportunity to produce seeds and keep the species going.—Exchange.

Minard's Liniment Cures Garnet in

THE JUNKER, WHAT IS HE.

What is a Junker, and what is Junkerthum? are questions which many readers would like to have answered, in view of the frequent allusion to the influence of the Junkers over the Prussian military machine. According to Herr Bamberger, "a Junker (Jung Herr) or Younker, is essentially the scion of a noble house (younger son), which has devoted itself to military service a mixture of Charles I. Cavaller, Prussian lieutenant. German feudal lord and Spanish Don Quixote.

In Prussia the term was originally applied to cadets of the noblesse, and to young country gentlemen who acted as ensigns and did other squirely duties; while Junkerthum or Junkerism gradually came to denote the social qualities which distinguished this class-family pride (probably deepened by poverty)-reactionery conservatism and arrogant caste demeanor.

In 1848 the word was applied by the liberals in a practical sense to the high Prussian or Conservative party, mainly composed of the reactionary landed gentry, who loathed the very name of reform. Mommsen in his history of Rome speaks of the narrow-mindedness and short-sightedness as the real and inalienable privileger of all genuine Junkerthum.

In his history of Germany, Menzel

says the youthful warriors of the ancient Germans weft called Huns: that they took a mutual pledge as brothren in arms and elected a leader by raising him on a shield. These Huns were devoted to war and pledged to death. War was their business and their pleasure. Death was part of the game.

In his chapter on the ancient German tribe of Alemanni, the same writer says, referring to the invasion of Gaul in 253 A. D.: "A young warrior, inquiring of his mother how glory was to be obtained, she replied: "There are only two ways: one by creating grandeur, the other by destroying it.' The latter pissessed the higher attraction, and leading an army across the Rhine be utterly destroyed more than 60 Gailic cities, of which not one stone was left upon another."

flear. Even Higmarch was a Junker infected with the blood and from na-ture of the ancient Hun, and Alemannian. He was always opposed to any reform where the people would strive for rights denied them by the nobility, and he boastingly gloried in his Junkerism, when it was a term of reproach by the last generation, before Sermany became the Junkertha

nation it is to-day. It was the Junker Bismarck who told the English Ambaseador that Attila was a greater man than John Bright, because he had left a greater ame in history.

It was Bismarck also who said: "All reat cities are mere bodies of anarchy and revolution, and should be swept from the earth."

Guard Against Evil Spirit.

If a Chinese baby dies, the evil spirt when released will enter the body of the next child born. In order to provent this calamity, says World's Work, the parents "tie an egg and some mustard seed to the body of the dead child in the belief that the evil spirit will not appear until the egg hatches and the seed sprouts. The astute parents carefully boil the egg and the seed in order to postpone the date indefinitely.

If All Played Out, Try This Prescription

When that overpowering weariness and a never-rested feeling comes over you, it shows some serious disorder is undermining your health. The cure is simple. Build up the system and nourish the body back to health by

pure wholesome blood. The one sure means of doing this is with Dr. Hamilton's Pills. They are a marvellous aid to appetiteconvert all you est into nutriment and tissue-building material. Thus a weak body is supplied with new nerve fibre, hardy muscle and firm flesh. Lasting good health is sure to follow. If you really want to get well and stay well, use Dr. Hamilton's Pills, 25c. per hox at all dealers.

GRIZZLY PASSED ON. Seeing the Elk Herd Angry He Sought Dinner Elsewhere.

"While camped at 8,500 feet altitude near the head of Fawn creek in the Gallatin range in the northwestern part of the Yellowstone National Park," writes Version Battey, chief field naturalist of the United States biological survey, in a book sent to be issued by the National Park service, I could make out with a field giass elk herds on the high ridges south. west and north of camp. By climbing cautiosiy, so as not to disturb the elk. up to 10,000 feet in Quadrant mountain south of camp, I was soon in the midst of one of the choice summer ranges.

"Smal! herds and scattered individuals were seen over the big. open siopes above timber-line; bunches of old bulls with full-grown velvety horne lying on top of the ridges where the wind was strongest and insects least troublesome; calves and yeariings playing over great snow anha on the cold slopes; and cows peacefully lying in meadows of rich. short grass and clover. Little streams and pools of ice-cold water were everywhere and the elk were a picture of contentment and satisfaction with their ideal summer home.

"After watching them for about an hour a large grizzly bear that had been digging mice on a neighboring slop was seen walking across toward the cik. As he came in view their heads went up and the herds near me gathered into one dense mass of about 500, old and young, while the bear walked past close in front of them and on over the ridge, scarcely turning his head to notice them. The herd was a beautiful sight. twentyfive or thirty old bulls with sets of large horns towering above the numerous small sets while the front ranks were mainly filled with anxious cows ready to give battle for the protection of their young. When the bear had disappeared they quietly dispersed to their grazing and seemed very little concerned."

Are ringing bells in the far away -Henry Burton.

THE PURPLE EAST

(Philadelphia Record.) We fear the Purple East presents a

very drab aspect to the Germans. The

nce with which they annexed the entire Orient-in their imaginations is the measure of their despair over the news that they have been getting from that quarter, not rapidly, but very steadily, for a good while. In the first two years of the war it was going to be no trouble at all to eliminate Great Britain from Egypt; the Turks would do that. And with the Bagdad Railway and the Pepulan Gulf in their pessession, the tressures of the Indian princes and the diamonds of Golconda were not very far away. Dutch colonies would fall into the German lap. With the collapse of Engand, Japan would est out of Germany's hand. Turkey and Persia and Afghanistan and Beluchistan Would yield profits to Berlin and Hamburg and Munich, and a museum was already projected for Stuttgart that would show German capitalists the emites routes to the wealth of Ormuz

and of Ind. In talking of these things the German papers scarcely used the future tense. It is not necessary to go to the circumlocution of speaking of what would be by and by; it was just as well to talk about what is; practically it was achieved. Pooh Bah explained to the Mikado that whatever he ordered was so certain that it might be regarded as already done. Hence he had taken the liberty of saying that the second trombone artist had been decapitated, when, as a matter of

fact, he had not been. the Lekal Anzieger declared a couple of years ago that "practically" the route from Hamburg to the Persian Guif was aiready German. The four stages on that route were the capture

MRS. S. MASTERS.

of Antwerp, the bombardment of Belgrade, Galliyoi and Kut el Amera. Everything else was merely a matter of detail.

But the details have all gone wrong The Turks did not arive the British out of Egypt, and the Suez Canal failed to fall under German control. In spite of Kut el Amara, the British have advanced well through Mesegetamia, and are about sixty miles from Mosul. In Syria the defeat of the Turks, who were to have conquested Suez, has been followed by their smashing by General Allenby, in which probably 40,000 Turks have been taken: prisoner and all the artillery and transport and supplies of two Turkish armies have been captured. Turkey has no means of replacing these losses. Germany cannot spare a man with her own western front caving in steadily and the Americans getting close to taneous collapse of the military forces of both of those minor accessories after the fact to the crime of Germany.

Could Be Worse

The Woman at the Back Door - It must be a terrible thing to have to go through life without your limb. You scription—large, small, plain, carved, be restored to you in the next world." "I know," said the tramp, "it will, mum, but that don't encourage me none. You see, me foot was cut off when I was a baby, and it won't come within a foot of the ground when it's restored.—Puck.

storm of applause.

Paper Lifeboats.

A paper lifeboat can be packed away in a space of about one cubic foot, but which, when inflated, is seaworthy and durable, is the invention of a retired admiral of the Japanese navy. The hoat is constructed from the Japanese paper called "hashikirazu," which is treated chemically to make it waterproof. The paper comes from the mulberry tree. It is unusually durable, and possesses great strength when the stresses are in the

direction of the fibre.

A thin sheet of paper that is strong when stressed in any direction is made by pasting together two sheets with the fibres crossing at right angles. This is the way in which the paper boats are constructed. The first boat manufactured by the admiral consisted merely of a by the admiral consisted merely of a large billow with a depression in the center, the whole being inflated with air. Because of the ease with which paper can be punctured, it was necespaper can be punctured, it was neces-sary to change the method of construc-tion, so several pipe-like bags were made and placed side by side in the form of a raft, which finally was modified to the form of a boat.

The result is a life-saving crait prac-tically immune to wreck, for even if one or two of the pipes are punctured or broken, the boat still has sufficient hupwings to the segmenth.

huoyancy to be seaworthy."

Owing to its strength and lightness, and its waterproof and fireproof qualities, this paper is evidently adapted to a wide range of uses, among which are the making of coverings for aeroplane wings and for dirigible balloons.

Minard's Liniment Cures Colds, etc.

The Miracle of the Modern Newspaper.

(Kitchener Daily Telegraph) In an admirable address delivered be fore the Lendon Advertising Club a few days are by Editor Louis Blake Duff, of the Welland Telegraph, who is well nown in this community, he made the challenging statement that the "newspaper is the greatest miracle in the age of miracles. To-day, said he, you bought for two cents the history of the world yesterday. Behind the finished product of the newspaper was the highest skill and ingenuity of man. Years of study and effort and millions of dollars had been spent in morely constructing the channels that to-morrow would give men their news for a penny. Faithfuiness was the beacon and "What does the world want to know," was the guiding star of every period and comma that entered into the hewspaper of to-day. Carlyle had said that there three estates in parliament, and that yonder in the press gallery sat a fourth estate, which was equal, if not greater in importance, than the other three Napoleon had said that the Cologne Gazette was mee, than the other three. Napoleon had said that the Cologne Gazette was worth ten hattalious on the Rhine. The papers of those days didn't give any more space to the battle of Water-los than wedd he given to a ball. And yet if, the newspapers of one hundred years ago were termed the fourth estate, and if a single one was considered the equal of ten battalions, was it not worth white to consider what they are to-day.

E February, when President Wilson

was to make a momentous announcement before both Houses, the Chicago Tribune sold 70,000 copies. The paper was made from wood ent in this country, and was made into paper in milis along the Welland camal. Eighty-four acres of pulp were cleared out that issue, and 510 mest took four days to make the paper. If spread out that sheet to sheet it would mach from Behring Strait to Canal would reach from Behring Strait to Cape Horn. If that amount of paper were bought in the 60's, it would have cost \$185,000. One of the most unique papers in the world was the Prenza, published in Ar-gentina, sold for seven cents, and con-tained more news than the metropolitan Ontario dailies would publish in a week.

It was published in a \$6.000.000 plant, which included a palatial hespital, hotel, thrary and conservatory of music. ewspapers are not as subservient to that as they were twenty-five, or owen ton years ago, for they had learned that they could only live if they served the public. The deligation of the paper is pringarily and lastly to the reader. There are two lights to the pathway of the editor, what the public wants, and what the public should have. Newspapers were nore truttful and closer to sound principles than they are at present. These

PAIN EXTERMINATOR Print Hirst's will stop it!

(New York She). The Germans hold several impa tant cities in northern France and in Beigium, from which they are about to be driven by the pursuing and avenging award of civilization. Not only towns like Cambrai and

till for Table (II

St. Quentin and Bruges, of twenty-five to fifty thousand inhabitants or thereabouts, but also greater centres of population, with from a quarter of a million to half a million, like Lille and Antwerp and Brussele.

Yesterday it was officially reported by Field Marsirel Haig that the Germane were burning the city of Cambrai in the prospect of its immediate capture. According to their usual practice they were wantonly destroying that which they were compelled This is the way of the Hun from

time immemorial. For the Hun's crimes in the past, for Louvain and Rheims and the long succession of deliberate violations of international law and treaty engagements, for the myriad recorded and unrecorded offences against art, and earning and common humanity itself. no adequate reparation can ever be enforced, no suitable punishment can ever be int. ct :u. These things are

But for the protection, of the sucession of cities through which the murderers and thieves and incendiaries in gray winform are about to take their homeward way, beginning with Cambrai, there is an obvious and effective means of protection. To the Hun the only deterrant is the fear of certain. retribution, qualitative and quantitative. In the airsence of this four he will continue to kill and pillage and burn on the ictreat as on the advance. Assured of measured and merciless reprisal, he will crawl as he has always crawled when in terror of the coming of the square deal.

Accordingly, to that end we propose the subjoined table of equivalent or

proximately	equivale	nt retribu
lues:	-	
For Cambra	ai	. Mulheim.
For St. Que		
For Lille	`I	Jusseldorf.
For Bruges		
For Antwer	D	Frankfort.
For Brussel		
For Liege .		Hanover.

We have no doubt that this table can be improved in detail and extended in geographical application. Perhaps the method of prevention and protection which it suggests can be rendered most effective, not by promising to destroy the equivalent German city, but by promising to hold it and its inhabitants to convict labor until it has paid the last pfennig of its nation's shameful debt for the destruction of the French or Belgian city set against it in the foregoing list.

Which plan of reprisal would see more dreadful to Hunnish apprehensions? We confess we don't know.

THANKFUL MOTHERS

Mrs. Willie Theriault, Pacquetville, N. B., says: "I am extremely thankful that I tried Baby's Own Tablets for my baby. Through their use baby thrived wonderfully, and I feel as if I cannot recommend them too highly." Baby's Own Tableto break up colds and simple fevers; cure constitution, colic and indigestion, and make teething easy. In fact they cure all the minor ills of little ones. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams Medicine Co., Brockville,

H.M.S. Vindictive.

There are questions in the Lightning. And they quiver o'er the Seven Seas and whisper far and near;
"Where is Old Vindictive, one foremost in the chase? may be Death with Glory, it cannot And the old Vindictive answered in a measage curt and free: 'At her post, and on her duty, as she siways tried to be."

She was once as smart a cruiser as ever chased a foe.
But the soung ones mustered stronger, so the eld ones had to go;
Yet with confidence she waited, for she felt from stem to stern That e'en a worn-out man-o'-war might serve to do her turn. And she did it well and nobly, as all the world has known. When the elisolete Vindictive came once

She had the grandest funeral that was ever seen before, For her "Last Post" was sounded in a Her Regulem was chanted in a scream of shot and shell.

And a reading shout of victory replaced of gnot want sites, And a reading shout of victory replaced the passing bell. So they left her on mission to protect, defend, and save, And she's back again on service—Active Service in her grave.

Science and the War.

disseminate the scientific point of view and a consciousness of the historical function of science has been made and has beca attended av a considerable measure of success Guring the past generation by our adversaries. Of course it may be urged that if science makes us like the Germans then for heaven's sake like the Germans then for howen's sake let us have no more science. But to this we may reply in the first place that the misuse of fire does not render fire a wholly malignant evil to be eschewed, and in the second place that "needs must when the devil drives". We are placed under the necessity of becoming scientific or else ultimately succumbing to the domination of the only modern nation among whose people the scientific viewpoint is at all widely distributed. There can be no doubt as to which alternative we will prefer and we may as well adopt it whole-heartedly.

The Germans have characteristically cultivated the materialistic aspects of science to the elmost total exclusion of its idealistic and spiritual values. But it is the character of the recipient mind which renders science metalistic in the character of the recipient mind which renders science metalistic in the character of the recipient mind which renders science metalistic in the character of the recipient mind which renders science metalistic materialistic mind which renders science metalistic materialistic mind which renders science metalistic materialistic materialistic mind which renders science metalistic materialistic materialistic mind which renders science metalistic mind the materialistic mind which renders science metalistic materialistic mind which renders science metalistic materialistic mind the materialistic materia it is the character of the recipient mind which renders science materialistic, not our place within it which is the itself—T. Brailsford Robertson, in The Canadian Magazine for October.
