THE CONTROL OF WEEDS

Measures and Methods for Getting Rid of Them.

Education Must Accompany Legislation—Farmers Like to Be Shown—Results of Experiments on Over Seventy Farms.

(Contributed by Ontario Department of Agriculture, Toronto.)

IN Ontario two methods have been tried for the control of noxious weeds, namely legislation and education. Under legislation there is "The Act to prevent the spread of Noxious Weeds." The main clauses of this act are as follows: "Every occupant of land, or if the land is unoccupied, the owner, shall cut down or destroy all Canada Thistle, Ox-eye Daisy, Wild Oats, Ragweed, and Burdock growing thereon and all other noxious weeds growing thereon to which this act may be extended by bylaw as hereinafter provided, so often in every year as is sufficient to prevent the ripening of their seed, if such cutting or destruction does not involve the destruction of growing grain.

"The council of any local municipality may, and upon a petition of fifty or more ratepayers shall, appoint at least one inspector to enforce the provisions of this act in the municipality, and fix the amount of remuneration, fees, or charges he is to receive for the performance of his duties; and if a vacancy occurs in the office the council shall fill the same forthwith.

"Any person who knowingly sells or offers to sell any grass, clover or other seed, or any seed grain among which there is the seed of Canada Thistle, Ox-eye Daisy, Wild Oats, Ragweed, Burdock, or Wild Mustard shall for every such offence incur a penalty of not less than \$5 and not more than \$20.

"Any person who sows any wheat or other grain knowing it to be infested by the disease known as smut without first using some proper and available remedy to destroy the germs of such disease, shall incur a penalty of not less than \$5 and not more than \$20."

A few years ago an investigation was made into the effectiveness of this act and it was found that out of the six hundred townships of Ontario, only ninety-two were making any effort to enforce it. In forty-nine only had inspectors been appointed. In regard to the work of inspectors, seventeen townships reported the work of the inspectors as satisfactory; fourteen reported that the work was partially satisfactory. Out of the six hundred townships of the province, fifteen only reported that this act was successfully enforced; seventy-two that it was partially enforced; and the remainder reported that it was practically a dead letter. It would seem from this investigation that legislation is having but little effect in the control of weeds in Ontario.

Legislation without education is, in the opinion of the writer, useless. It is only when the sentiment of those concerned is behind an act that it can be successfully enforced and such sentiment can be created only by proper education.

In regard to education, considerable has been done by the Ontario Agricultural and Experimental Union. This organization in co-operation with the Department of Botany at the Ontario Agricultural College has carried on, during the past eight years, co-operative experiments in weed eradication. Over seventy farmers have conducted successful experiments. The weeds experimented with were—Perennial Sow Thistle, Twitch Grass, Bladder Campion or Cow Bell, Wild Mustard, Ox-eye Daisy, Field Bindweed, Wild Oats and Chives.

The objects of these experiments is to get data from which definite statements may be made regarding the best methods of controlling the various bad weeds. It is hoped to include more weeds each year until exact information has been obtained concerning the eradication of most of the bad weeds in the province.

The results of this work are presented each year at the annual meeting of the Experimental Union at Guelph and the more important results are published in the annual report.

Six of these experiments have now been carried on for eight successive years, and some very valuable information obtained regarding the control of such weeds as Perennial Sow Thistle, Twitch Grass, Bladder Campion, and Wild Mustard. This information may be briefly summarized as follows:

1. That good cultivation followed by rape sown in drills provides a means of eradicating both Perennial Sow Thistle and Twitch Grass.
2. That rape is a more satisfactory crop to use in the destruction of Twitch Grass than buckwheat.
3. That rape gives much better results in the eradication of Twitch Grass and Perennial Sow Thistle when sown in drills and cultivated than it does when sown broadcast.
4. That thorough deep cultivation in fall and spring followed by a well cared for hood crop will destroy Bladder Campion.
5. That mustard may be prevented from seeding in oats, wheat or barley by spraying with a twenty per cent. solution of iron sulphate without any serious injury to the standing crop or to fresh seedlings of clover.

In addition to this experimental and educational work of the Agricultural and Experimental Union, the Department of Botany has carried on various experiments in the eradication of many of the worst weeds of the province.—Prof. J. K. Hogg, O. A. College, Guelph.

Church Services

Knox Presbyterian—
REV. A. W. HARE, B. A., MINISTER
Sunday School at 10 a.m.
11 a.m.—"The Church in the Home."
