Experimental Farm Notes

Comb-Honey Production

Several circumstances have caused the production of comb-honey in Canada to lag. Of late years there has been a heavy demand for extracted-honey, and a colony will produce more extracted-honey than comb-honey, requiring less attention from the bee-keeper. On account of the fragile nature of comb-honey, it does not ship as well as extracted-honey. The high price that comb-honey brings is not high enough to compensate for these disadvantages. But, for many who keep a few colonies, comb-honey production is more attractive than extracted-honey production because it is a clean job and requires less expensive equipment, and is a pleasure to produce sections of honey. Comb the finest product of the apiculture. Moreover, it has been demonstrated that comb-honey can be produced profitably on an extended scale both in the St. Lawrence Valley and in Southern Ontario. In every city there is a demand for the better class of trade for good sections of comb-honey at a fair price. As the world's food needs become better satisfied, we may expect the demand for comb-honey to increase.

Comb-honey production requires greater skill in the management of bees than extracted-honey production. Too often the small producer does not take sufficient care to produce a well finished article, and sells the inferior product at a price that makes it unprofitable.

The most favorable conditions for producing comb-honey are a heavy honey flow such as comes from clover, and strong colonies. The bees should be crowded in the hive, the brood chamber reduced to small dimensions, and when the first super of sections is well begun or half finished, should be given underneath it to keep the bees occupied in working sections in all stages. A third super may be needed a few days later if it is likely to be finished.

Each section must be fitted with a sheet of thin super foundation. To help the bees start work promptly, a "bait comb" consisting of an unfinished section from which the honey has been extracted may be placed in the first super given.

The chief problem in producing comb-honey in Canada is the control of swarming. To prevent swarming, plenty of ventilation should be given below, and it is a good plan to examine the brood chamber every week during the honey flow and destroy all the queen cells. If, however, the colony swarms, the parent colony should be removed to a new place and the swarm should be put in a new hive placed on an old stand, this hive to contain only six or seven frames fitted with foundation, and one comb to receive the pollen, the spaces at the sides being filled with division boards, and the partly finished supers should be transferred to the new hive.

Comb-honey can often be economically produced in combination with extracted honey in a shallow super, the extracting frames being placed on the outside.

COUNTY COUNCIL

(Continued from Page 1)

The following communications were then read:

1. Good Roads Association re conference.
 2. Copy of Resolution to Provincial Premier.
 3. Lr. re Amendment to Dog and Sheep Act.
 4. County of Kent, re action for damages on highways.
 5. County of Ontario.
 6. Good Roads Association, asking for membership fee.
 7. M. E. Gough, applying for appointment as County Engineer.
 8. Inspector of Prisons, reporting on inspection of jail.
 9. Trustees' Association, asking that a delegate be sent.
 10. Town of Donville, asking for assistance in building a walk opposite the House of Refuge.
 11. Hospital for Sick Children, applying for grant.
 12. Children's Aid Society, application for grant.
- Pyle-Hudspeth—That Messrs. McCarter, Foster and Bradford be a Special Committee to deal with the communications. Carried.
- Smelser-Buckley—That this Council do now adjourn to allow the different committees to meet. Carried.
- Buckley-Houser—That the following named persons be the Striking Committee for the year 1920, viz: Messrs. Clark, Smelser, Doyle, Holland, McCallum, Hudspeth and Pyle. Carried.
- Buckley-Houser—That we resume business with the Warden in the chair. Carried.
- Houser-Holland—That the report of the Striking Committee be received and read. Carried.

Cayuga, January 27, 1920.

To the Warden and Members of the County Council:

Gentlemen,—We, your Striking Committee, have met and would recommend the following committees:

1. Good Roads—Messrs. Clark, Doyle, Smelser, Holland, Pyle, McCallum and Hudspeth.
2. Roads and Bridges—Messrs. Buckley, Houser, Stephens, Bird, Berry, McCarter and Ranchev.
3. Finance—Foster, Houser, Stephens,

Bird, Berry, McCarter and Ranchev. Supply—Messrs. Buckley, Stephens, Foster, Bird, Bradford, Berry and McCarter.

Home—Messrs. Holland and Pyle. Building—Messrs. Foster, Houser and Bradford.

Printing and Insurance—Messrs. Smelser, Bradford and Hudspeth.

All of which is respectfully submitted.

(Signed), W. G. CLARK, Chairman.

Buckley Smelser—That the report of the Striking Committee be adopted as read. Carried.

Smelser-Hudspeth—That C. J. Martin and A. E. Duffin be the Auditor to audit the accounts of the County for 1919, also the accounts of the House of Refuge. Carried.

Clark-Doyle—That Messrs. S. A. Thompson and C. J. Smelser be appointed Criminal Auditors for 1920. Carried.

Hudspeth—That the following be appointed to the Board of Education for the Town of Donville for the year 1920, 1921 and 1922, and Amos Bailey a Trustee of the High School Board for the Village of Hagersville for 1920, 1921, 1922, and that the same be read a first time. Carried.

Berry-Hudspeth—That the bylaw appointing Messrs. Bird, Berry, McCarter, Houser and Ranchev be read a second and third time, signed, sealed and entitled a bylaw as in the original motion. Carried.

Smelser-Buckley—That the Clerk prepare a bylaw appointing S. A. Thompson and A. E. Duffin Auditors to audit the accounts of the County, and also the accounts of the House of Refuge for the year 1919, and the bylaw be read a first time. Carried.

Buckley-Houser—That the bylaw appointing C. J. Martin and A. E. Duffin as Criminal Auditors be read a second and third time, signed, sealed and entitled a bylaw as in the original motion. Carried.

Foster-Holland—That the Clerk prepare a bylaw appointing S. A. Thompson and C. J. Smelser Criminal Auditors for the year 1920, and the bill be read a first time. Carried.

Houser-Buckley—That the bylaw appointing S. A. Thompson and C. J. Smelser as Criminal Auditors for the year 1920 be read a second and third time, signed, sealed and entitled a bylaw as in the original motion. Carried.

McCallum-Ranchev—That we do now adjourn to allow the different committees to meet. Carried.

Will Human Race Die Out?

From the recorded facts extending over nearly three centuries, it is found that in 1610 the average height of a man in Europe was 1.75 metres, or say five feet nine inches, while in 1790 it was only five feet six inches, says Spare Minutes. In 1820 it was five feet five inches and a fraction. At the present time it is five feet three inches and three-quarters. It is easy to deduce from these figures a rate of regular decline in human stature, and to apply this, working backwards and forward to the past and to the future. By this calculation it is determined that the stature of the first man attained the surprising average of six feet nine inches. Truly, there were giants on the earth in those days. The race had already deteriorated in the days of Og, and Goliath was quite a degenerate offspring of the ancients. Coming down to later times, we find that at the beginning of our era, the average height of man was five feet and, in the time of Charlemagne, it was eight feet eight inches.

But the most astonishing result of this scientific study comes from the application of the same inexorable law of diminution to the future. The calculation shows that by the year 1900 A.D. the stature of the average man will be reduced to fifteen inches. At that epoch there will be only Lilliputians on the earth.

"Aluminum" or "Aluminium"?

The Oxford Dictionary says that "aluminum" was the name given the metal by Sir Humphrey Davy in 1812. As late as 1879, Cassell's Technical Educator used the original spelling, "aluminium," the "original" says the Oxford Dictionary, "was the name first suggested by Davy for the metal which he finally called 'aluminum.'" In 1854, Pereira said in his "Materia Medica," that "aluminum, aluminium, or alumium, is the metallic base of the earth alumina." In 1812, the year in which Davy christened the metal, the Quarterly Review said: "Aluminum, for so we shall take the liberty of writing the word, in preference to aluminium, which has a less classical sound." Apparently it was the Quarterly Review which took upon itself the authority to change the spelling from that adopted by the corner of the word. The spelling "aluminum" was carried to America, and has not been changed.
