LATER STUDIES AT THE O.A.C.

Will Be Two Distinct Courses in Future.

One for Farmers, One for Experts.

Toronto despatch: According to changes which have been made in the courses offered students at the Ontario Agricultural College at Guelph there will in future be two distinct training courses in order to supply the needs of agriculturists, teachers of agriculture and the various other features of farm activity. In making an announcement of the changes yesterday, Hon. Manning Doherty, Minister of Agriculture, pointed out that an agricultural college is expected to satisfy two distinct demands. The first is to train and educate men who intend to make farming their occupation, and the second is to train and educate men who will become professional agriculturists, that is teachers, investigators, agricultural representatives, journalists and administrators in agricultural departments. Up to the present, it has been the practice for the Ontario college as well as other institutions of the kind in Canada to try to combine the two aims, but now courses have been planned to serve the two distinct needs. With this in view, there will be a two-year course for the man making farming his occupation and there will be a four-year course for the other classes. Any candidate for the two-year course will be admitted if he is at least 13 years of age and has had one year of farm work. Candidates for degree course must be 13 years old, must have had one year's farm experience, and must have passed the examination for junior university matriculation, or they must be experienced farmers... years of age who lack not more than one year's study of the matriculation standing. The latter will be required to complete their matriculation before entering the third year at the college. In commenting upon the changes yesterday, Hon. Mr. Doherty pointed out that the two aims are so different that the attempt to combine them in the same course has lessened the value of the course for either purpose. He added that about 25 per cent of those entering the O. A. C. go on to finish the B. S. A. course, and of this 5 per cent only a small percentage ever become farmers. The fact that a man starts a two-year course will not prevent him from going on for degree work. Hon. Mr. Doherty pointed out that practical training will be necessarily limited, this including actual work in handling horses and implements, leading live stock and many other operations that can be given to advantage only on a smaller farm. When a man young man without farming experience applies to be taught farming, he will be advised to work on some good farm for a time. For the two-year course the college will teach any practical work which can be given to a large number of students at the same time, this will include judging live stock, poultry and grain; identifying weeds and weed seeds; testing milk; making and judging butter and cheese; simple carpentry and blacksmithing and operating tractors; the principles of pruning and grafting fruit trees, and the composition of animal foods and fertilizers. The students can also learn in class what kind of feeds are best to produce growth or meat or milk, what methods of cultivation are recommended for various crops and the best methods for other farm pests. The two-year course is based on the belief that a farmer should have some knowledge of business, banking, credits, oats, markets and marketing, transportation, tariff and taxation, planning farms and farm work, and the right relation between capital investment, maintenance cost and revenue. So far as the four-year course is concerned, Hon. Mr. Doherty pointed out that it might make the student any better farmer than the two-year course would, but it would give him a better chance of becoming a prominent citizen and a leader in his community. The four-year course is specially devised to meet the demand for specialists in field husbandry, animal husbandry, horticulture, dairying, poultry, agricultural chemistry and biology. The demand comes from colleges which require teachers and investigators, while departments of agriculture frequently require men to administer their various branches or to carry on experiments, and the four-year course is planned to supply the men required.

200 JAP MINERS DIE IN EXPLOSION

Tokio, June 25.—Two hundred miners have been killed by an explosion of fire damp in the Yubar coal mine at Sapporo, on the island of Yezo, according to despatches received here today.

HONORED BY FRANCE

Several Canadian Officers Are Decorated. A London special cable says: (Canadian Associated Press)—The President of the French Republic has decorated the following with the Ordre du Merite Agricole (Chevalier): Captains J. Agriollet (Chevalier); Captains J. Agriollet, Second Central Ontario; Lieut. G. J. Culham, C. F. A.; Captain E. T. Dickson, First Central Ontario; Captain F. Moscop, A. S. C.; Captain G. A. Strubbe, Quebec Regiment.

BRIDE'S ATTIRE WAS "IMMODEST"

Priest Refused to Perform Ceremony

Until She Changed Her Gown.

New Orleans, June 25.—A wedding ceremony in St. Louis Cathedral was postponed several hours today because the officiating priest, Father Antoine of the Order of Oblate Fathers of Mary Immaculate, declared the bride was immodestly attired and violated a recent order of Archbishop Shaw, of the Diocese of New Orleans, relative to the wearing of apparel. The priest declared the bride appeared to him "so shocking that he had the sexton put out the lights so that she might retire and properly clothe herself."

Although he declined to divulge the name of the bride, he declared she "wanted to fly in society style at her wedding, much to her disgrace."

Everything had been prepared for the wedding and the bridegroom was in the edifice. The altar was ablaze with candles and the electric lights in every part of the ancient cathedral were lighted. The bride started up the main aisle but had not gone far before the priest viewed the gown, ordered the lights out and sent her home to assume other garments. The marriage ceremony was then performed.

FARM CONDITIONS

Hay Very Light, but Fruit Splendid.

The following is a summary of report made by the agricultural representatives to the Ontario Department of Agriculture: Local showers during the past week or ten days have helped the hay and grain fields and the newly sown root crops, but in many parts the rainfall was inadequate for best conditions. It now looks as if hay will be a very light crop, both clover (which is now in blossom) and timothy being thin on the ground and short in height. Alsike, as a rule, has not kept up to its earlier promise, alfalfa is doing better. There has been an unusually good setting of fruit in orchards, more especially of the summer and fall varieties of apples, and this despite the fact that fewer bees than ordinarily were to be seen during the period of bloom. Small fruits also are making a good showing. Fall wheat in some counties is heading unusually low, which will mean a lot of short straw for this crop. Spring grains have grown very slowly owing to the dry weather of May, and in some instances there has been injury from the wireworm. The spring crops generally look better in eastern Ontario than in the western counties. Fodders are scarce, and many farmers are purchasing feeds of various sorts to supplement the ration until the new crops come in.

CORN SMUT

The smut of corn is well known to farmers. The smut masses which usually appear as swollen outgrowths may be found on the ears, stems, or leaves. These outgrowths are sometimes quite large and make the smut very conspicuous. They are at first covered by a thin membrane, which soon breaks away and exposes the black mass of spores. The mass soon becomes powdery and the myriads of spores which each mass contains are readily blown about by the wind. It is these spores that spread the disease during the growing season and carry the smut over the winter to the next crop. In many of the smuts, as the smuts of oats and the stinking smut or seed of wheat, the spores get on the seed and when the seed is planted begin growing with it and attack the young seedling. Treatment with a solution of formaldehyde is effective in killing the spores on the seed and preventing infection of the young plants. In the case of the loose smut of wheat and the loose smut of barley the spores are blown about at blossom time and grow into the very young seed. The hot water treatment of the seed is used to kill the smut inside the seed. In the case of corn smut seed treatment of any kind has been found to be of no use, as the smut spores live over in the soil or in manure rather than in or on the seed. So the only way to control the corn smut is to prevent the smut spores getting into the soil or the manure. Not only do the spores live in the manure pile for some time, but they may actually increase rapidly in number if the conditions are favorable. Corn smut is found in all parts of Canada where corn is grown, but is more common in Eastern Canada. Generally it is not very prevalent and the losses are not great. Where it is common measures should be taken to prevent its spread. The smut masses should be cut out during the growing season. They should be removed before they have broken open and spread their spores. They should not be left lying where they may reach manure or refuse and be carried back to the soil, but they should be gathered and burned. Rotation of crops is also valuable in preventing corn smut. The smut does not live long in the soil, and will not attack any other crop, so time should be given for the smut to die out in the soil before another crop of corn is planted. Seed treatment has not been found to be of any use in corn smut. W. P. Fraser, Plant Pathologist.

COMPLETING THE NEW HOME OF THE EXILED KAISER. Notwithstanding the demand for the extradition of the ex-kaiser, the work of completing Doorn House, his new residence in Holland, is being hurried forward. Enclosing inner garden with a brick wall.

LOYALTY TO THE SINN FEIN

Newly-Elected Irish Councils Pledge Theirs.

Dublin, June 25.—Meetings of the newly-elected Sinn Fein Councils in South Tipperary, Carrick-on-Shannon and other places have been accompanied by extraordinary scenes of enthusiasm. Resolutions have been adopted acknowledging the authority of the Sinn Fein Parliament, congratulating the Irish Republican army on its manifold successes, and calling upon the army to protect the lives and property of the citizens. Copies of these resolutions have been forwarded to the Governments of Europe and the United States. At Carrick, Government revenue documents were publicly burned in the council chamber. A sum of money, to the amount of £1,000, seized by the police and military in a raid months ago on a Sinn Fein bank, was returned to-day by the Government to the bank manager through the Sinn Fein member of Parliament, E. J. Duggan. The removal of personal arms from the officers of an American ship which arrived at Dublin became the subject of inquiry by the American Consular officials to-day. When the freighter Milwaukee Bridge arrived at Dublin recently, the police took pistols from the captain and three other officers under the pretext that a raid for arms by Sinn Feiners was feared. It is pointed out that a ship which in port is amenable to local laws, but the American officials want assurance that there is an apparent necessity for the seizure of arms in Irish ports. ANOTHER INSPECTOR KILLED. Gorey, County Wexford, Ireland, June 25.—A police inspector, Captain Wilson, has been shot by five armed men. Seven shots were fired at him.

MILLIONS LOST

By Barren Soil, Says Cornell Professor.

Guelph, June 25.—Barren soil is losing millions of pounds of expensive plant food every day it lies uncropped, according to Dr. H. O. Buckman, of the Department of Soils, Cornell University, who spoke at the opening meeting to-day at Canadian Fertilizer Association conference, at the Ontario Agricultural College. Fertilizer men, farmers, fruit farmers and gardeners, and others interested in the enrichment of soil and greater production of food products are in attendance. This is the second annual conference. Superintendent Grant of the C.P.R., recalled to the meeting the fact that the judicious use of fertilizers the yield of potatoes in New Brunswick has been increased from one million to twelve million bushels over the past eight years. If results attained in actual field experiments in England could be applied and reproduced in Canada the increased value in dairy products alone would amount to over 37 per cent, or a total in excess of twenty-five million dollars in value, stated Henry H. Bell, director of the soil and crop improvement bureau of the Canadian Fertilizer Association, Toronto, who is in charge of the conference. The sessions continue for the next two days, when soil topics of increasing interest will be discussed.

VETERINARY BOARD

To Issue Licenses to Ontario Practitioners.

Toronto, June 25.—During the recent session of the Legislature a bill was passed, stating that after January, 1921, no person shall practice veterinary science for fees in Ontario without certificate from the Minister of Agriculture entitling him to do so, and stating further, that the certificates are to be issued upon the recommendation of a board of three members, to be appointed for this purpose. The personnel of the board has now been decided, and was announced yesterday by the Minister of Agriculture to be composed of Dr. C. D. McGilvary, principal of the Ontario Veterinary College; A. G. Farrow, Oakville, breeder of Short-horns, and C. W. Gurney, Paris, importer and breeder of Belgian horses and Shropshire sheep.

Wireless Takes Melba's Song All Over Europe

London, June 25.—Madame Nellie Melba the opera singer, sang yesterday to an audience spread over the British Isles and a large part of Europe. By arrangement with the Daily Mail, the prima donna, standing in a small room at the Marconi works at Chelmsford, sang several songs into a microphone, when they were transmitted by wireless telephone on a wave length which should have enabled them to be heard within a radius including Rome, Madrid, Berlin and Stockholm. Telegrams have been received from Paris and The Hague reporting that the songs were heard there very clearly, while numerous owners of wireless apparatus in Great Britain also heard them with distinctness.

FORTUNATE ALBERTA!

Edmonton, June 25.—"Crop conditions in central Alberta are absolutely ideal. I have never seen anything like it," declared James McCaig, Commissioner of the Provincial Department of Agriculture, yesterday. "This moist weather is bringing the grain along in wonderful style. The wheat and oats are growing rapidly, and the blades are plump and luscious. They look like onion shoots, so fat and full of moisture are they. Only in one small district in the south of the province, that lying immediately north and east of Lethbridge and MacLeod, has there been any damage reported. This has been due to the high winds there during the last week.

RESTOCK OUR FARMS.

Duty On Cattle From U. S. is Removed.

Ottawa, June 25.—With the object of restocking Canadian farms which have suffered through excessive drought of the past two years, an order-in-council has been passed which, in effect, moves the duty from cattle entering the Dominion from the United States from the present time to February 1, 1921. The order was passed several days ago, but has been held up to some extent by the Customs authorities, who have had to arrange minor details and issue instructions. Interviewed on the matter to-night, Hon. Dr. Tolmie, Minister of Agriculture, said the move was solely for the purpose named and the Government hoped to get the southern portion of Alberta and some parts of Saskatchewan back to normal within the present year. "This year the prospects are excellent for grass on the prairies and the order should provide cheap cattle for the Canadian farmer, yielding him a good profit, and prevent the grass from going to waste," said Dr. Tolmie. "The grass prospects in many sections of the West are better this year than in a decade."

The two children of Nicholas Tierigan, a homesteader residing seven miles west of Anselme, Alberta, who wandered away from home about noon of last Wednesday, have been found dead in the bush about a mile distant from their home.

BRITISH CAVALRY IN IRELAND. This is one of the flying columns who have been sent from England to maintain the peace in the Emerald Isle and are patrolling the towns and villages in the troubled districts. The picture was taken in Enniskerry, County Wicklow.

MARKET REPORTS

TORONTO MARKETS

Table with columns for various market items and their prices. Includes sections for 'Dairy Products', 'Poultry', 'Fruits', and 'Vegetables'. Items listed include Butter, Creamery, Eggs, Chickens, Apples, etc.

NEATS WHOLESALE

Table listing wholesale prices for various types of meat, including Beef, Pork, Mutton, and Lamb.

SUGAR WHOLESALE

Table listing wholesale prices for different grades of sugar, such as No. 1 yellow, No. 2 yellow, etc.

WINNIPEG EXCHANGE

Table showing exchange rates for various commodities in Winnipeg, including grain and oil.

USE MORE BEANS

(Experimental Farms Note.) The ripe bean is a form of food very much neglected in Canada. Lack of variety is one of the serious faults in our national diet. Many people seem inclined to use a very limited number of foods and, as far as possible, to make each day's meals resemble those of the day before; while, in other cases, the dull routine of a fixed everyday cycle prevails. It is well known that a varied diet is more wholesome than a restricted one, and especially in these times when good food is scarce and high in price, it is really deplorable to note the neglect of some of the best Canadian-grown food materials, such as beans, peas, lentils and barley. It is well known that a varied diet is more wholesome than a restricted one, and especially in these times when good food is scarce and high in price, it is really deplorable to note the neglect of some of the best Canadian-grown food materials, such as beans, peas, lentils and barley.
