Methodist District Meeting

The regular meeting of the Simcoe district of the Methodist church was held at Simcoe last Thursday.

The feature of Thursday's proceedings was an address by Rev. Dr. Burns, Toronto, on "Church Work." Card of Thanks

Through the columns of The Record I wish to express my thanks to the Ladies Aid, of the Methodist church, for their donation to me of five dollars for publishing their church notes during the past conference year. I am truly grateful to the Aid for this act of appreciation shown me. As the Conference year ends the first of June, and "The Record" was taken over by the Printing Co. in March, I feel that part of this amount is not justly mine. I have placed into the hands of the Secretary of the Company a check to the amount of \$1.25, which I trust will meet with your approval.

Eliminating the Poor Cow

The object of cow testing is to give the dairyman accurate knowledge as to the production of milk and fat of each cow in the herd. It is readily admitted that the average cow does not produce as much milk as she is capable of giving, and many dairymen keep one or more cows that do not even pay for their keep. Cow testing shows which cows are worth keeping in the herd and gives evidence against those that should be eliminated from the herd. "The Progress of cow testing," bulletin 58, Dairy and Cold Storage Series by A. H. White, B.S.A. shows that many farmers rely on guess work to pick out their best cows from which to save heifer calves for future herds. Frequently, these guesses are not correct, cows which have good conformation are not always the best producers in the herd. Dairy Records will do away with guess work, and the farmer can safely select his best cows for breeding purposes. The bulletin, "The Progress of Cow Testing" may be secured free upon application to the Publication Branch, Department of Agriculture, Ottawa. In addition to giving the essential objects of cow testing it outlines the details of organization and gives some of the results obtained, which shows that many farmers have increased the production of their herds from 30 to 75 per cent and some have doubled the herd average in a few years. Wherever cow testing has been followed for a few years, a decided increase in the average production of each cow will be found.

Herbert Peacock won ten firsts, three seconds and one third on his Clydesdales and Oxford Down sheep at Rainham Fair.
