### CURRENT COMMENT

MR. GUTELIUS SOMEWHAT BELATED.

Mr. Gutelius was like the lady in Hamlet who protested too much. He would have been more convincing had his bias not been so obvious. He had no use for publicly owned radials and could see nothing for them but ruin and failure from any point of His attitude before the Commission appointed to investigate the Hydro Radial proposals was identical with that of the critics of the Hydro-Electric proposals fifteen years ago. It was impossible for the plan to succeed, they said. The estimates would be fabulously overstepped. The debts would bankrupt the municipalities and destroy the credit of Ontario. There power used by the system. Expert engineers were hired to write to the over their own names and these statements were flung at every advocate of public ownership of electric power and distribution. Had a commission been appointed then and listened to the expert testimony, there would power, the \$35,000,000 saved in the last ten years to power users would have been in the pockets of the power monopoly, only it would have been collected from a fraction of the present consumers at enormously greater prices. Mr. Gutelius is well trained in the corporation methods and he sees things with a corporation eye. Fifteen years ago he believed that Sir Adam Beck could make a success of Hydro power distribution and he has not changed his mind. He befleved then as it was asserted that any reduction in the price of power and light would bankrupt the companies, and he is still of this opinion. Mr. Gutelius is a steam railroad man, and he has been managing steam he said, had been the most unsatisfactory ever experienced. On the other owned electric service have been the best, and five years of radial operabusiness and profits.

#### ANARCHIC DEVELOPMENTS IN INDIA.

# AN INEXPENSIVE

CATTLE SHELTER

To be effective, a shelter must provide comfort for the cattle and as such must be warm, dry, clean and airy. Of these characteristics the least essential is that it be warm. If the shelter be dry and of such a nature as to protect the animals from wind and storm they do not suffer much from low temperatures.

Such a shelter may consist of as may be made of wire or poles but Fewer price changes are noted this otherwise it is better made of beards. Along one side buid a frame of 2 x 4 on lines such as bar iron and steel, inches two feet apart and two and a sheets and plates and ingot metals, half feet from the wall to serve as a manger. ## BUILDING THE PROFITABLE FLOCK

During the latter part of March and the month of April I was asked to cull a number of farm flocks. informed my inquiries that this was the wrong time of the year to do culling, because almost any old hen or pullet should be laying at this time, but the majority of those who came to me persisted that they were getting no eggs and said they wanted their flocks culled out regardiess of

In most of the flocks I visited, some two dozen, I found the prevalent trouble to be the immaturity and the improper feeding methods of the stock In practically every one of those flocks the egg yield was being made at a loss and could be accounted for either by the lateness of the hatching season of the year hefore or by failure to keep the pullets growing toward a normal maturity.

Notwithstanding the effort that has been made to give publicity to and show the necessity of an early hatching season, I find very few Marchhatched chicks in my work of culling. The great majority of farm flocks am speaking of general farms and not of poultry farms-hatch their chicks in April. May and June, with the greater part of the second month. Whether or not this is true in all sections I do not know.

Now these pullets hatched in May and June, especially, must have very favorable growing conditions. They should be kept growing and every precaution taken that they suffer no setbacks. The same is true of all pullets whenever they are hatched. but the earlier ones may come through and suffer some limitations in regard to their care and still mature in time to begin laying in the fall or early winter. The late pullets will do this. They must have the care necessary for good and consistent growth, for in the majority of cases the heavier breeds will not come into laying even with good

care in less than about seven months. The best way to bring these May and late April pullets to the proper maturity to make profitable layers is by the hopper method of feeding. Given a variety of both whole and ground grains in hoppers, plenty of shade, house room and some attention, the late hatches will surprise the owner who has been struggling along with the old method of hand

Trade Review

TORONTO reports to Bradstre

cohol, fruit juices, perfumery, playing

cards and confectionery are the chief

lines on which the tax has been left.

although it is understood that efforts

are being made to have this removed

on some of these, such as confection-

ery. While at the time of writing

it is somewhat early to say much re-

garding the material effect of the lift-

ing of the thax, there is no doubt that

the psychological effect has been tre-

mendous, not only on the retail and

wholesale trade but on a large sec-

tion of the buying public. A num-

ber of large retailers at the begin-

ning of the week stated that the in-

crease in sales had been very great

and that it was much easier to sell

goods now that customers did not

have to be confronted with the tax.

The only drawback to the lifting of

the tay has been that it came a little

late for the Christmas trade. Al-

though there may still be an inclina-

tion in some quarters to hold off pur-

chasing till after the holidays in the

hope of further price cutting then,

this will not be nearly so marked

now, as the public feel to a large ex-

tent that the ban has been lifted on

the spending of money. Wholesalers

re now looking for heavier orders

It is expected that one result of the

heavier movement of merchandise

which is hoped for, will be an in-

crease in manufacturing operations

which will do much towards reducing

the volume of unemployment which at

present is large and the situation

serious. There is no doubt that there

is a great deal of hardship in the city

at the time being through many men

being out of work. The general

slowing up in all lines of activity has

been gradual but extensive and pe-

titions are being sent to the govern-

ment to take action to relieve the dis-

tress. Collections are still slow

which is probably due to the small

trade which retailers have been do-

sane buying of goods on a pre-war

the goods and with the tax off a

good increase in business is looked

for. While some lines of industry

for the purpose of taking stock has

shows signs of steadying and prices

A moderate volume of good

from their travellers.

ing.

weeks ago.

Hoppers are not expensive. - Any sort of a box that will protect the feed, allow the chicks free access and prevent any considerable wastage will answer the purpose, but it is a mistake to believe that whole grains alone will serve, even if hopper fed. These pullets need mash and meat in some form. The range rarely fur-

nishes a sufficient supply of insects and bugs to supply this animal food and either milk or commercial meat scrap in some form should be used as a supplement to that gathered on the range. I used and recommend a dry mash developed from the small grain grown on the farms when we have them—a mixture of ground corn. oats to which have been added wheat bran and scraps. However, no one best mash can be recommended and commercial mashes can often be used to an advantage where the grain is not on hand on the farm or grinding is an expensive procedure.

With pullets properly matured the

culling will eliminate those which are most apt to prove unprofitable and it should by all means be done in the early fall. Hens, too, should be culled at this time and the drones and boarders sold. As culling for egglaying ability is done by external characteristics, especially the capacity and pelvic bone tests, these can be more naturally judged at this time than at any other. It is the low ebb of egg production and, as the body characteristics of a hen change considerably as egg production increases, it is poor policy to wait until she is producing or about to do so before attempting to cull the flock. lets can, of course, be culled at any time before they begin laying but the best time is when they are just at maturity. This also does away with boarding the unprofitable females through a longer period than is necessary.

If females are carried over until spring before being culled the Poss sustained is readily recognized. More than that, unless the late April, May and June hatched pullets are given advantages that tend to promote growth, and if they come into the laying house in a state of immaturity, there is little chance of any method of culling being able to save loss that might have been avoided if these things had been more closely and intelligently watched.

jewelry this season has been very good. The drug trade has been rather slow as far as actual staples are concerned, although fancy articles are moving freely. Collecions are poor and credit men find it necessary to make considerable effort sometimes to get in the money.

SINLESS SUNDAYS SAYS ALLIANCE

Rev Harry L. Bowlby.

"No matter what popular opinion may be" in the gist of the Lord's Day Alliance utterances, "the United States must return to a purer and more sacred Sabbath" This statement, following the opening of headquarters in New York with National Secretary Rev. Harry L. Bowlby in charge, has excited the big town folks as no other recent event. For under the cleak of "dry cleaning" the United States through federal and state laws, New York has discovered that the drive of the Lord's Day Alliance of prohibiting all Sunday amusements is the ultra aim against the use of tobacco, especially the cigaret. The Fifth Avenue Coach Company has taken a vote of its thousands of riders and will contipue to permit smoking on the three rear seats atop their own

Yours faithfully, W. A. GARDNER.

Few of us have not read the romantic story of "The Scarlet Pimpertinct and interesting connection between that famous story and "The almost couldn't finish. First Sir Percy," by the same author -Baroness Orezy-which is a romance of an arcestor of "The Scarlet Pimpernel." "The First Sir Percy," a roving, romantic, fighting, loving Englishman who left his native land to take part in the strenuous wars between Spain and the Netherlands in the early seventeenth century, did not travel under his own name; but took up with two companions and was known to them as Diogenes.

The story opens with the accidental discovery, by Diogenes, of a plot by which two traitors to the Prince of the Netherlands, hope to kill the Prince and conquer his fertile lands for the Spaniards. Diogenes had fallen in love with the daughter of the Burgomaster of one of the important Netherland cities, and was on his way to mary her. Her brother is one of the traitors who is plotting against
