Come to Our Store TO-DAY

An Old Resident Gone

Bridgeburg, Nov. 27.—Mrs. Margaret Clark, the oldest resident along the Canadian Niagara frontier, was buried here to-day, aged 115 years. Mrs. Clark, who was colored, was the daughter of an escaped slave, who fled from the south and settled in Canada about 118 years ago. She could clearly recall the war of

1812, and the burning of Buffalo in 1814. She remembered Buffalo when it was a small village, and would vividly recall the Fenian raid, the Mackenzie Rebellion, Mackenzie's flight across the river at this point, and events connected with the civil war.

Two sons and one daughter survive. Mrs. Clark was active almost up to the last.

Fortune-Tellers Fined

Brantford, Nov. 25.—Two Hungarian gypsy fortune-tellers, Mary Stephenson and Angelina Nicholas, and their male treasurer, Zolota Demitro, were fined \$20 to-day for theft from three local men under specious fortune-telling pleas. They will also pay back the money they secured.

ABOUT THE FARM WELL

A Most Important Factor in Agricultural Work.

Purity of the Water a Great Essential—Location Also of Importance—Construction Described—People on Farms Live Longest.

(Contributed by Ontario Department of Agriculture, Toronto.)

The well is the usual source of the farm water supply, and a good well, that is, one which supplies plenty of pure fresh and wholesome water the year round, is certainly one of the most essential and valuable assets of the farm. Without it, no man could live there for long, to say nothing about bringing up a healthy family, or building up an efficient dairy herd. The well must be there first and last and all the time, and we cannot conceive of an intelligent man buying a farm without a good well if he intended to live on it and make it pay dividends.

A Good Water Supply Is Common. Fortunately most of Ontario's farms are well supplied with water. In fact it is a rare thing to find a farm where it could not be secured in sufficient quantities by drilling to reasonable depths. The supply, therefore, will probably never cause us any serious worry, but judging by a recent report on analysis of many well waters from this province one seems justified in concluding that there is still need for education of the rural public in regard to the protection and care of the farm well. The following suggestions will be found helpful to any farmer desirous of making his water supply safe against possible underground and surface contamination.

Location of the Well Most Important.

The first step in the solution of this problem of purer water supply is the location of the well. This should be by all means on ground higher than any source of contamination such as barnyard, cesspool, or outside privy. If there should be no choice in location and this cannot be done, then the well should be kept a considerable distance from such contaminations, at least 100 feet in clay, and 200 feet or more in sandy soils, and the cribbing and top of the well specially protected as detailed later against the entrance of any seepage and surface washings.

How to Keep the Water Uncontaminated.

In the second place the cribbing for at least ten feet below the surface should be made impervious to water so that any contamination in solution reaching the well would have to pass down through this extreme depth of soil before getting into the well, when in all probability it would be taken up by the soil and never reach the well water. This may be done in case of an old well by putting a wall of puddled clay one foot thick and ten feet deep around the well cribbing, and in case of a newly-dug well, or recribbing an old one, by using large concrete tile for the cribbing and setting the joints thoroughly in rich cement. Before the tile are placed in the well the outside should be washed with pure cement plaster in order to fill up all pores and make the tile absolutely impervious to soil waters. Thirdly, the cribbing should be extended at least one foot above the ground level, and the soil banked up to the top of it, to provide good surface drainage away from the well. Fourthly, the well should be provided with a strong and tight-fitting cover made of heavy plank or concrete so that it will always be safe for man and beast, and proof against the entrance of dirt, small animals like frogs, etc.

Using a Second or Dry Well.

Even better still, the pump may be placed over a shallow dry well to one side and the top of the real well made absolutely tight by a concrete cover. In this case the well should be ventilated by putting a small iron pipe, with the exposed end turning downwards, through the top or cover. And, fifthly, the stock should not be allowed to tramp about close to the well.

What has been said refers chiefly to dug wells, but even the drilled or driven wells should be well drained and protected at the top, for otherwise contamination may work down along the well casing and reach the water, especially if the casing is not tightly driven into the rock below.

Attention to such matters of construction and protection of the farm well as here detailed, and an occasional pumping out and cleansing of the well with a little lime, will assure a pure and wholesome water supply.—R. R. Graham, O. A. College, Guelph.

People on Farms Live the Longest.

Life on the farm is the healthiest and safest, according to statistics compiled by the United States Bureau of Labor showing the average age at death in various occupations. The farmer and farm laborer live longer than other workers. This does not "seem longer," which, it will be remembered, is the joint in the old joke concerning the longevity of married folk contrasted with bachelors and spinsters—it is longer, and official research records prove it. Farmers live to the average age of 58.5 years, blacksmiths are given three years less of life, and masons and bricklayers die at an average age of 55. The list tapers down to bookkeepers and office assistants who are given an average life of no more than 36.5 years.

Bats in full flight in the dark will avoid threads stretched across their path.

Bible City Found.

What is regarded by many scholars as the most valuable discovery which has yet been made by the archaeologist in Palestine is the location of the site of the city of Capernaum. Among its ruins have been found the remains of a synagogue believed to be the very one wherein our Saviour preached.

For over fifteen hundred years the very site of such an important Bible city as Capernaum has been in dispute. It was thought that it stood at the northern end of the Sea of Galilee at a place called Tell Hum, where there are extensive ruins.

A systematic examination of these ruins, and the discovery of ancient documents, now make it clear that this, indeed, was ancient Capernaum.

The ruins of a Jewish synagogue have been brought to light. Explorers say this temple stood there in the days of Christ, and is the very building referred to in the Gospels. The position of the stones would indicate that it was destroyed by an earthquake. It is the belief of the excavators that the whole edifice can be reconstructed.

A Waste.

"You waste too much paper," said the editor. "But how can I economize?" asked the contributor. "By writing on both sides." "But you won't accept stories written on both sides of the sheet." "I know, but you'd save paper just the same."

Spinning Glass.

A method has been perfected for spinning glass into practically endless threads, which can be wound on spools of ordinary thread and used for many purposes.

Ice.

Some rivers of ice flow over ice many years old, almost as solid as rock. A tributary of the Lena has a bed of pure ice more than nine feet thick.

The Progressive Candidate for Haldimand

What the Progressive Party stands for:

It is the policy of the Progressive Party, to build up a country with a staple, sane and economical Government.

A COUNTRY in which all the producers of wealth shall receive a fair and proper share of the results of their labor.

A COUNTRY which puts a premium on effort and thrift and discourages idleness and intemperance.

A COUNTRY in the government of which all classes of the people shall have a share in proportion to their numbers and economic importance.

A COUNTRY in which Government is not subservient to the "Big Interests" but truly represents the ideals of the "Great Masses" of the population.

We believe that performance is better than promise, and we rest our claim for the support of the workers, on the great declaration that we stand for industrial freedom of those who toil, and the political liberation of those, who, for so long have been denied justice.

REMEMBER—"A thriving, prosperous farming community means more business, and a greater prosperity for our Towns and Villages."—Manning W. Doherty.

ISSUED BY

The Haldimand United Farmers' Political Association

Canada for the Canadians

What Is To Be Canada's Destiny?

Shall it be that through the destruction of the Tariff as proposed by both Crerar and King, the development of Canada is to come under the domination of the United States, to be followed by gradual financial domination and as a consequence, political domination?

OR

Is Canada's destiny to be that of a great free nation within the British Empire group of Nations, developing her boundless resources of mine, river, water power, forest, and cultivating her millions upon millions of acres of arable land? Is her development to surpass that of any other nation?

Shall her manufacturing industries develop her minerals and raw materials into implements and goods for the benefit and comfort of her people and for foreign trade?

Shall she become a self-contained nation within the Empire, her great railways interchanging, the products of factory and farm among her own people, and her ships sailing every sea?

Shall she maintain her integrity within the Empire and protect her farms and factories against unfair competition from foreign countries?

IF THIS IS TO BE CANADA'S DESTINY THEN CANADA NEEDS MEIGHEN.

On December 6th, Canada should once again protect her farms, her factories and her workmen against the unsound theory of Free Trade, and should hold fast to her reasonable Protective Tariff, her national entity and her British connection.

On December 6th Canada should declare with no uncertain voice that she will not tolerate the false trade theories of visionaries and group leaders which tend toward her economic destruction, toward the separation of her people and the weakening of the ties that bind Canada to the British Empire.

On December 6th Canada should demonstrate unmistakably to the outside world her fixed determination to keep Canada for the Canadians.

On December 6th Canada's destiny is at stake.

Canada Needs Meighen
