

The Woman Seller

The Story of a Crack Salesman Who Invades a New Territory—and Clinches His Prospect.

BY RICHARD CONNELL

PART III.

I changed the subject. I told him about my little boy, Ned.

"He's as husky a four-year-old as you ever saw," I told my neighbor. "Aren't kids a pest?" inquired Mr. Mulqueen.

"Only in the comic supplements," I answered, with a trace of asperity. "My boy is the best fun in the world. Kids a pest? Wait till you have one of your own!"

"I never expect to," said Mr. Mulqueen.

"Then you'll miss just about the finest experience in life," I said.

"Well," said Mr. Mulqueen, "you ought to know. I know it's great to watch that kid of mine developing. Why do you suppose I talk myself hoarse selling cars?"

"For dough," suggested Mr. Mulqueen.

"Partly. But mostly because I want to give that kid of mine an education. Because I want to build up a business and give him a flying start in life. Why, Tim, my work has been twice as much fun since I've had that kid to work for."

I know when to begin to call a man by his first name.

"He's an inspiration, that kid," I went on. "It's the real thing, I tell you."

"Well, you ought to know," said Tim Mulqueen. "Can he say 'da da' yet?"

"Why, man alive, he can say anything in the dictionary," I said proudly. "And he can read 'cat,' 'dog,' and 'pig.'"

"I don't know much about kids," admitted Mr. Mulqueen. "I thought for the first five years they did nothing but bawl."

"Ned never bawls," I said. I have to admit that this was an exaggeration.

"You don't tell me?" said Mr. Mulqueen. I answered questions about Ned for an hour.

"You boys mustn't tire yourselves talking," said Miss Quest, when she came in with our gargle.

When she had administered the gargle and gone, I called over the partition:

"Have you noticed what a pleasant voice our nurse has?"

"No, has she?" said Mr. Mulqueen. I judged from his tone that I had derailed his train of thought. I suspected him of thinking about Ned and kids.

During our milk-toast breakfast next morning Mr. Mulqueen did not say "I was happy till I met you in the ramparts of Quebec." There was a strange, unwonted silence in his cubicle. Then he broke out with:

"I wish some of the boys would come out to see me. I've been here a long time now, and no one has come near me."

"It's a long way out here," I reminded him.

"Your wife comes every day," he rejoined.

"Yes," I said, "but there's a lot of difference between a wife and a friend."

He said nothing more the rest of the morning, and I read my magazines. About noon I heard him say:

"There's a lot in that."

"In what?" I asked.

"What you said this morning."

"About what?"

"About a wife sticking to you better than friends," he said. "I've been thinking about it."

The partition hid my smile from Timothy D. Mulqueen.

Miss Quest brought in our lunch. It included some glorious goulash French toast.

"My hat, this is wonderful!" I said to her. "Who made it?"

She blushed and said:

"Why, I did."

"Isn't this the real thing in French toast?" I shouted to Mr. Mulqueen.

"Miss Quest made it."

"It's hot stuff," agreed Mr. Mulqueen from a crowded mouth. "I haven't tasted anything so good for twenty years."

Miss Quest's blush deepened. She went out.

"There's a fine woman," I said.

"Where?" asked Mr. Mulqueen.

"I mean Miss Quest," I said.

"Some cook!" said Mr. Mulqueen heartily. I judged he was enjoying the French toast.

queen, humbly, I thought. "I don't know much about such things."

"Notice what thick, handsome hair she has," I said. "It's as fine a head of hair as I ever saw."

"You don't tell me?" said Mr. Mulqueen.

Miss Quest came in with our post-lunch goulash. When she had gone out, Mr. Mulqueen remarked:

"They are nice."

"What are nice?"

"Her hair and her smile," he said. "He could not see my smile."

"And it's pretty the way she moves around," he admitted.

"What a wife that woman would make!" I said in the manner of the soliloquies of old-fashioned melodrama.

"What makes you think so?" he asked. Was I wrong or did I detect the signs of awakening interest in his tone which every salesman learns to recognize and strains an ear for.

"Well, what qualities does the ordinary man look for in a wife?" I asked.

"Good nature, I suppose," said Mr. Mulqueen.

"Miss Quest is one of the best-natured persons I ever met," I said. "She looks after peevish, helpless patients all day and never loses her smile. What else?"

"Loyalty," said Mr. Mulqueen after an interval of cogitation.

"Miss Quest is faithful to her job. She hasn't missed a day in nine years, they tell me. And it's a hard job, too. Anything more?"

"A wife ought to be a good housekeeper," I supposed, said Mr. Mulqueen, after considering the matter a moment or two. "You know what I mean—neat, economical, and a good cook."

"You're full of evidence this minute that Miss Quest is a corking cook," I said, "and the way she takes care of us and our rooms shows that she could keep a house snug and comfortable. As for being economical, I've heard that out of the little salary she gets here she's saved money. What else?"

"I wonder why she never married," mused my neighbor.

"She never found the right man, I suppose," I said carelessly. "Of course she's had lots of chances. I understand that there's a florist in Greenwich right now who is crazy about her."

Heaven forgive me the fiction.

When Miss Quest brought my fever neighbor his baked potato that evening, I heard them talking together in low voices for some minutes.

"And none of the boys have come to see me," I heard him say.

"What a shame!" said Miss Quest, and there was real sympathy in her quiet voice. "Perhaps they don't know where you are, Mr. Mulqueen."

"Oh, they know well enough," he said, "but they don't care. Nobody cares."

"You mustn't say that, Mr. Mulqueen," she said. They talked some more. I didn't mind if she was late with my supper that night.

I made a quick recovery from my scarlet fever; I lost my skin rapidly and efficiently, and raised an entire new crop. My thoughts turned to golf and Dekkar Eights.

I talked to Mr. Mulqueen about Miss Quest; he seemed to enjoy the subject. Sometimes, around goulash-time, I made snoring noises; I heard low-voiced conversation in the next cubicle.

The day before I was to be discharged my wife came to the hospital with my clothes. When she pushed open my cubicle door, a low, regular, whistling-rippling noise from the adjoining room told us that Mr. Mulqueen was asleep.

"Helen," I said softly, "please knock that large red book off the table."

"Why, Phil, what in the world for?" She was alarmed.

"Sssh, tell you later. Only do it," I whispered.

Helen knocked the book off the table. It hit the floor with a gratifying smack. The snoring in Mr. Mulqueen's cubicle stopped abruptly.

"My dear," I said to Helen, raising my voice. "I want you to ask cousin George to dinner at our house next Monday."

"Cousin George?" asked my wife blankly. I have no cousin George.

"Yes, Cousin George Winship of Perry Sound. Not Cousin George Stanton of Owen Sound," I said, making faces and motions at her. "I want him to meet Miss Quest."

"Oh, Cousin George Winship of Perry Sound," said my wife. "Certainly. I haven't seen old George in ages."

"I'm very anxious to have him meet Miss Quest," I said. "I think she would make a splendid match for him, don't you?"

"Splendid," agreed Helen. "Couldn't be better. I'd like to see him marry her. She's a splendid girl. But aren't you afraid, Phil dear, that we'll disturb the man next door?"

"I'll have to watch," said Mr. Mul-

A splendid serial will commence next week, entitled "The Green Ray," from the pen of William Le Queux, the famous English writer of Mystery Stories. It is a tale of the British Secret Service during the Great War and holds the reader's enthralled attention from start to finish. Look out for the opening chapters of this exciting yarn in next issue.

"No fear," I said, "he's fast asleep. I'm glad you agree with me that Miss Quest would be a good match for Cousin George. The rich old rascal needs somebody to help him spend all the money he's making from his bee farm."

"Oh, is George a bee farmer now?" asked my wife. "Has he given up his poodle kennel?"

"His poodle kennel? Oh, by no means. He still has over a hundred poodles. He keeps two poodle clippers constantly busy."

"But, Phil, do you think Miss Quest will like him?" asked Helen with some difficulty.

"She's sure to," I said. "He's just the man for her. She won't be able to withstand that black moustache of his. She has as good as told me that she is only waiting for the right man to come along."

"Good old George," said Helen, "he'll get a peach of a wife in Miss Quest. He won't be slow in asking her, either."

"No," I agreed, "I shouldn't be surprised if it were a case of love at first sight, and a marriage in a month. Poodle fanciers are so warm-blooded and temperamental, you know."

"Good," said Helen. "I love to play matchmaker. I'll write to cousin George this very night."

"And I'll ask Miss Quest after supper," I said.

We heard a stirring in the next cubicle.

"Oh, I hope we haven't disturbed your nap, Mr. Mulqueen!" I called out.

"Not at all, not at all," he said gruffly, and his voice, I noticed, had lost its friendly joviality. He muttered something to himself. I thought it sounded like "poodle fancier."

Helen left, and I fell asleep, and snored with such obvious enjoyment that when Miss Quest came in with the mid-afternoon gargle she did not wake me to administer it, but went into Mr. Mulqueen's cubicle and talked.

After supper, my last in the hospital, I said to Miss Quest:

"I hope you can come to see us some time. I know how dull it must get out here. When can you come? Monday for dinner?"

"I'm not going to be here much longer," she said with her smile and a blush.

"No?" I said. "What hospital are you going to?"

"I'm not going to a hospital," said Miss Quest. "I'm going to be married."

I met her in South Beach a year later, while I was demonstrating a Dekkar Eight out there. She was wearing a green tricotine suit and was pushing the largest perambulator I have ever seen.

(The End.)

Voices From the Sky.

Passengers by air liners of the future will, when weary of travelling, be able to listen to some music-hall star in London while they themselves are far out above the Atlantic.

This has been made possible by the wonderful progress made of late in the development of wireless telephony in relation to flying. Machines of the future will be as capable of being fitted with electrophones as are London clubs to-day.

Often a business manager sitting in his London office gets in touch with the principal of his firm when the latter is speeding in an air express to Paris. These voices from the clouds are as clear and distinct as if a telephone call had been put in to business premises in the same street.

Pilots will be able to switch on to a music-hall, or a court-room, and travellers will be able to listen to their favorite artistes.

Boxing Gloves of Lead.

Boxing is one of the world's oldest sports. The noble art of self-defence was practised more than thirty centuries ago.

It was indeed a strong man's game. One hero, called Enceladus, used to slay oxen by giving them one blow between the eyes with his fist.

Boxing gloves were in use even in those early days; but there was a difference. The glove of to-day is a padded affair designed to soften the effect of a blow. In former times it was meant to increase the force of the punch! It consisted of a strip of leather, reinforced with lumps of brass and lead, which was wound round the pugilist's fist.

Men were willing to fight, not for a purse of thousands of dollars, but for a simple laurel wreath! The boxing matches of those days were no joke, for in most cases the vanquished boxer was killed by the knock-out blow.

Tomato Wastes.

Tomato pulp, for catsup, pastes and soups, is obtained in the requisite pure state by putting the tomatoes into what is called a "cyclocone machine," the material being forced through small holes in a metal screen to get rid of the skins and seeds.

More than 225,000 tons of tomatoes are pulped annually in Canada and the United States, the skins and seeds being thrown away. It is a lamentable waste, inasmuch as the seeds yield an excellent salad oil, which is also a valuable material for varnishes, being a quick drier. The residue from the oil press, mixed with the skins, makes a highly nutritious stock feed.

Woman's Interests

The Treatment of Colds in Children.

One of the most important of hygienic "don'ts" is "Don't neglect a cold." Most of us think a cold is a very disagreeable thing, and we let it go at that, without realizing that it is potentially one of the most serious of diseases.

In the first place, when it begins no one can tell what it may prove to be, or how it will end. It may be a simple cold that will last four or five days; it may be a left-over case of influenza—there is a good deal of that still; it may be the beginning of measles, or the first symptom of pneumonia; or it may extend into the accessory sinuses, the ears or the bronchi, and cause no end of pain and trouble. It may even intrench itself as a chronic catarrh and persist to the end of life. Therefore, the part of wisdom is to treat a cold—especially in a child—with great respect until you are sure of its identity and its intentions. Then treat it energetically; that is, treat the patient as you would treat anyone suffering from a serious disease.

The first thing to do—even before the disease has declared itself—is to put the child to bed in a sunny, warm and well-ventilated room and make him stay there. Do that even if there is only slight rawness of the throat, or feverishness, or nausea, or bone-ache and a general feeling of being out of sorts. Give a gentle laxative such as cascara or milk of magnesia or citrate of magnesia. If the cold proves to be a simple one, keep the patient in bed and every two hours give him a glass of water in which half a teaspoonful of bicarbonate of soda has been dissolved, and into which the juice of half a lemon has been squeezed. This is for adolescents; half as much is enough for young children.

In the case of an ordinary mild cold no other remedy is necessary, and three or four days will usually be long enough in bed. Then the soda and the lemon juice may be reduced to a dose morning and evening, and in two or three days more the patient can go back to school.

In the case of a severe cold or of influenza stronger remedies must be given, but only under the doctor's orders. Any cold severe enough to require real medicine is severe enough to require the doctor.

Vegetable Values.

Eat vegetables—eat them daily; the doctor's bill will be saved thereby. Vegetable eaters rarely need medicines.

Liver out of order, and feeling in a torpid state? Well, an extraordinary feast of tomatoes will relieve the depression, and do the work better than a doctor's prescription. The remedy will be found more palatable, too.

Ever suffered from insomnia? Nerves all tangled, needing readjustment? Lay in a stock of lettuce; eat these up, and the thought of opiates will cease to allure you.

What about the celery trench? There is bottled up in these tender stems sufficient tonic to soothe the most shattered nervous system.

If onions were not so odorous, they might easily take the place of celery. The everlasting prejudice against this nerve tonic can be mitigated by consuming them last thing at night. Eat raw onions if you can. A nibble at a blade of parsley will remove the odor and sweeten the breath.

The bluest of blue pills are valueless compared with spinach. Its actual medicinal value can only be appreciated by those who make it a regular part of their diet.

If you don't eat parsnips, you ought to, either roasted, boiled, or fried. They are not so extensively cultivated as they ought to be, and, considering their adaptability to various soils, the surprise is that more do not specialize in their culture. Only recently scientists have informed us that the root possesses almost all the virtues claimed for sarsaparilla.

Have you any desire to increase your weight? Without doubt the finest root grown in any garden is beet. In addition to its delicate flavor, it imparts to the body a healthy fatness which no other vegetable does. It is of considerable value as a winter dish, helping to maintain the natural heat of the body.

Too few recognize the actual food value of this most delicious root.

It is said that beans—the ordinary long-pod variety—allay thirst like no other vegetable.

Apart, however, from their claim as a thirst-quencher, beans are a vegetable of the utmost value as a food, and within recent years have attained considerable popularity.

Sufferers from general debility should feed on pumpkins. The ingredients of this vegetable are the basis of a patent medicine guaranteed to cure more ailments than flesh is heir to.

The world is increasing in inhabitants, however, who do not believe as they hear. The vegetable has excellent properties, and will help to keep one in the pink.

Ever tried watercress as a pick-me-up? The "nip" in these tender little leaves makes them delightfully palatable when used in sandwiches. In addition, they impart to the whole system the necessary vim when one

feels a bit out of sorts. It is such an accommodating growth, too. When the land is frost-bound, you may pick the shoots which have germinated in a box placed by the fireside.

If good digestion is to wait on appetite at all times, it will be necessary to assist digestion.

The best natural aid to this is the constant use of garsely. Don't, therefore, allow the garsely patch merely to die down in the winter-time. Secure every spray that grows; have it all dried. Apart from its aid to good digestion, it is an excellent flavoring for most dishes.

Have the value of the cabbage tabulated on the docket of the brain. You don't need to consume patent medicines guaranteed to cleanse the blood of its many impurities if these vegetables form a regular part of the diet.

A much more frequent use of cabbage will make for purity, and by a more natural process.

Eat vegetables, then, if you would be well. Eat them daily, and save the doctor's bill.

Gone With the Pin Money.

The father of Louisa M. Alcott, after his daughter's books had begun to bring in cash returns, held the "authoress" up as a shining example to a young great-niece. "If thee will study hard as Louisa did," said Bronson Alcott, "thee may write stories and sell them and have thine own pin money." The little girl on his knee belonged to this generation and did not quite understand. "Then I shall not write stories, Uncle Bronson," she replied, "for I have all the pins I need!" In Louisa's day, pins were costly and women were sheltered.

My lady's pin money and her country sister's egg-and-butter money are interesting tales of a day that has gone. In country and town alike, women have come into their own. On the farm, when Father's purse is insufficient or his wad tight, Mother puts in an incubator or a steam canner or buys a hive or a nursery; Little Sister borrows money at the bank "on her own" for a registered calf, and they go to it. In town, Mother "gets a job" and Little Sister does stunts, useful, ingenious or picturesque, as the case may be, to earn enough to go to college or buy herself a bond. It is a good thing the pin money era has gone. If the modern sense of independence in women means anything, it surely means that in coming generations there will be fewer children of the mollicolde variety, helpless "suckers" to tax a botanical term—that sap the parent stem but produces neither blossom nor fruit. Stalwart mothers mean stalwart sons and daughters. Perhaps voting and economically independent women will insure to the nation an increasing percentage of seriously interested men voters and thoroughly capable men of business.

Bride Behind the Veil.

A quaint marriage custom is in vogue in the Andaman Isles—the penal settlement to which "lifters" from British India are sent.

There are eighteen thousand prisoners in the settlement, and every Saturday morning all women who wish to be married are heavily veiled and paraded round a square. Men prisoners, qualified by good conduct for the privilege of marrying, stand outside this magic circle, judging as best they can the merits of the candidates.

When a man makes a selection he is at liberty to have the object of his choice picked out and the veil removed. No alternative to accepting the woman then remains to him.

Women, on the other hand, have the option of two refusals, but the third occasion is final one way or the other.

Dyed Her Sweater and Silk Stockings

Each package of "Diamond Dyes" contains directions so simple that any woman can dye or tint faded, shabby skirts, dresses, waists, coats, sweaters, stockings, hangings, draperies, everything like new. Buy "Diamond Dyes"—no other kind—then perfect home dyeing is guaranteed, even if you have never dyed before. Tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton, or mixed goods. Diamond Dyes never streak, spot, fade, or run.

The origin of Freemasonry, or even of its name, cannot be traced with certainty.

Keep Minard's Liniment in the house.

A Turkish turban of the largest size contains from 10 to 20 yards of the finest and softest muslin.

Eggs Boiled in Oil.

A new method of sterilizing eggs, as a preliminary to cold storage, consists in immersing them for five seconds in an oil solution at 250 degrees Fahrenheit. This brief exposure to a heat considerably above the boiling point of water is sufficient to kill not only whatever bacteria the egg may contain, but also the vital principle in those of them that are fertile.

Electrical machinery does the work. It is claimed that the eggs are in no way injured by the treatment and, when afterward put into cold storage they retain their freshness much longer.

Minard's Liniment used by Physicians.

Apricots are dried by the heat of the sun in California.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, F. T. Johnson, 246 Craig St. W., Montreal, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make \$250 to \$500 per month.
