Sealing Gas Wells to Conserve Supply.

The intensive drilling for oil now in some of the drillers. In several of the wells heavy flows of natural gas have been encountered. As this occurrence returned from a trip to Europe. He is almost always at a point where no says the French are working hard but ficulty has been experienced in capping gas wells or in controlling the flow.

The same conditions apply when

ner that oil-sands are protected from Labor, Hon. James Murdock. water, and uncontrolled gas flows are sealed off. At Medicine Hat and in the Peace River country several million cubic feet of natural gas was being wasted daily. The petroleum engineer of the above branch, with the equipment at his disposal, was successful in sealing off the wasting gas.

Hints for Campers in the Forest.

Be sure your match is out. Pinch it before you throw it away. Build a small camp-fire. Build it in the open, not against a tree or log or near brush. Scrape away the trash from all around it. Never leave a camp-fire, even for a

cost time, without quenching it with water and then covering it with earth. If you find a fire, try to put it out. If you cannot extinguish it, send word of it to the nearest Forest Ranger. Throw pipe ashes and cigar or cigarette stumps in the dust of the road and

cigar or eigarette stumps into brush.
