#### Duty.

Earth sets a task to every soul That in her realm belongs; For one, to dig her ditches; For one, to sing her songs; One thunders in her forums;

One makes her forge fires glow; One lulls a child to slumber, With music seft and low; To one, she holds with partial hand. The bauble called Success;

While others ply her hardest tasks For laborers' pay-or less; let when she's had her way with us. Her glory's not the test: They only fail, who labor here,

Who fail to do their best.

-Waldo T. Davis.

# PROBLEM OF GOOD ROADS IN CANADA

TREMENDOUS AREA WITH SCATTERED POPULATION.

## Miles of Main Roads-Highway From Coast to Coast.

The difference between national progress and retrogression may be pithily Glasgow University, founded in summed up in facilities of travel and 1450, is the cldest in Scotland, except transportation, and the maintenance of good roads is a matter which demands the unswerving attention of a modern country in no matter what direction it is making a bid for world prominence. The fact that it is easier to do right National prosperity lies in a network and a country ranks among progres-

The construction and maintenance The crowns of the former Imperial of roads in Canada constitutes a problem that is particularly difficult. Canada is a land of tremendous area and small and scattered population. To adequately link up the settled areas of the country a network of roads is rerender the same efficient service to a people many times as numerous. Upon a family of four persons in Canada rests the enormous responsibility of building and maintaining one mile of roadway and upon five average families the construction and maintenance

of a mile of main market highway Again, the peculiarity of Canadian conditions creates the necessity for the party is ready the driver steps careful owner is not at an income first on the self-starter and then on have his outing marred by serious gregations was precised in churches settled cities and tawns and the areas respect and their lines of communication as up to date as engineering can In the Polar regions conversation effect, there are many areas that have for his presence of mind in exige: to a mile and a quarter. This is because the air is cold clear, and extra- that are only being opened up to col- saw, he met, with considerable sang onization and that must be served by froid, a situation which, otherwise, roads of some kind.

#### The Penetration of New Areas.

The prime consideration in roadbuilding in Canada is possibly to enable the farmer to reach the markets was, of course, instantly held up by with his product as conveniently and an inspector of customs, who demandeconomically as possible, and this has ed to see his passport. For a moment first consideration in the drawing up he was stumped, but he quickly met of national programs. A second rethe emergency.
