BY IDA M. EVANS.

PART III.

very tulle scarf.
She took the wheel. Stephen looked at his watch. About three and a half Five minutes—ten—fifteen. Hard hours to make some thirty-seven breathing, strenuous arms. Twenty miles. Margin enough, he decided; —the rim of one wheel was free, restthe roads in and about Chicago are, ing on comparatively solid underclay, for the most part, built for speed. At Thirty—another rim agreed to come the same time, he wished that he were out and be good. Forty in his own capable wheel. Jim Town's purloose except the centre, I think," he

chase was a lower-powered make.

However power has taken on its motor scain all open. own relativity of meaning in this into the front seat, applied power and

Lettice daught the small, fleeting ground at the rear.

Towne's silence may have been happily expectant. A silence can be that. But Stephen Bentlewin was not in the mood for chatter, and she fell in

Perhaps she slowed down somewhat the next five miles. The speedometer responded to Stephen Bentlewin's glance toward it, however, and Lettice

But she was honestly uncertain when presently she came to stop at crossroads.
"To the le't we'll get a mile or two

of unpaved way," she said, medita-tively. "But the right turn means a

route." He strode off. A mile back window showed down a side road. a window showed down a side road.

They roused a sleepy truck raiser.

But he declined to bring his horses to pull a car from clay, and he declined to let them take his horses or his fliver to complete their journey.

Three miles is not a long distance.

The principal headquarters would be equipped with a large set of apparatus for both receiving and send-should be narr of the machine equip.

Three miles is not a long distance "Won't-Given the wrong margin— Lettice Towne caught her breath

till it was short and frightened in sound. She and Stephen Bentlewin faced each other in common incredul. ty. It seemed quite impossible that me—whenever you thought of me—"
this could happen—that they could be so near and tet so far from all the aids and demands of their times!

Her dark blue eyes were lifted to his. Stephen Bentlewin brushed a lect to many parasites, both vegetable and across his own eyes. On her

Lettice gave another very short, an understanding—
frightened breath, and her two white, He had the sensation of having ungloved hands clenched at her sides, built a long and unnecessary barrier crops is enormous. Thus a form of fungus known as rust on wheat in the bors' children, who came flocking the road to burn. Among the neighbors' children, who came flocking the road to burn.

"It's the only way!" This is preposterous! In the first had pitifully missed. place, it would take us hours— "I'll see!" One end of her tulle scarf fell in front of her. With a soiled hand she flung it back. "A clay bed five feet by, say, ten by eighteen inches deep—we'll hope it's no deeper—at the rate of two full handfuls a second-"Lettice! Get up! I insist! Look

at your gown, your scarf!" he was thoroughly angry, as at a silly and hysterical child. He took hold of

She wrenched from his hold. "No." Two fast, full hands clutched, tossed -her skirts pressed to their ruin in the mire that her knees had found. A marvelous instrument is the human hand. Unfelievably swift and capable at times. Afterward Stephen Bentlewin never recommended the feat to other motorists-indeed, deem-

It was ten minutes before Lettice by telling them what had been done.

Was back in her light silken motor

Beside a second wheel he dropped to coat, nothing on her head but the sil-

motor again, all open-" He sprang speedy, partial age. He smiled to himself, recalling days not long ago past when all motor speed lay in the womb of the future. For men like Hammond Wetiles these were more active more active than the speed lay in the work of the future. For men like Hammond Wetiles these were more active puffing. He threw open a clusch—waited breathlessly—and the car backed slowly but surely out of its limited bed and on to good solid

Lettice, who had waited with strainsmile. Perhaps she misinterpreted it.
She lifted her head happily and shot the car onward.
Five miles, on a superlatively even was forever ruined. Her slippers Five miles, on a superlatively even was forever ruined. Her slippers road, fell aivay. Five more. The two had not much to say, although Lettice were mud carriers. Her fingernails were black and broken. Her delicate face was smeared out of all beauty of

> But Stephen Bentlewin did not waste much time inspecting her appearance. He looked at his watch original crossroads, where, naturally

"Won't what?" "Blame me?"

"Why, in no case would I-"

"Is there any interurban car in this cheek there was a great splotch of and animal." "None. Several miles notion reason, but a small, bent, wind-forms of the mushroom and toadstool." "Ah! Sever my at the big motion-less wheels, so competent but so useless now. The hubs might have leered at him above the clay which held tires and lower spores. It is the irony of modern inventions that at times they can so stubbornly display their limitations.

The small, bent, wind forms of the mushroom and toadstell. They are spread by species some what like microbes, and like these, they seem to prefer living tissue or decaying animal matter, though many thrive on dead vegetable matter.

It is those kinds of fungi which feed on living plants that are so important of the mushroom and toadstell. They are spread by species some what like microbes, and like these, they seem to prefer living tissue or decaying animal matter, though many thrive on dead vegetable matter.

It is those kinds of fungi which feed on living plants that are so important on living plants that are so important of the country can be felt. They are spread by species some what like microbes, and like these, they seem to prefer living tissue or decaying animal matter, though many thrive on dead vegetable matter.

It is those kinds of fungi which feed on living plants that are so important of the country can be felt. They are spread by species some what like microbes, and like these, they seem to prefer living tissue or decaying animal matter.

A Pardonable Mistake.

flung her handfuls to the side of the little absently, tot. Because of his species are known.

"If attical"

It is only fair however to men—Bickings, Korffer, Graisy. He that many fungi are useful to man, the girl's freckles. "No," she stammer-

Sartorial Pleasantry. Slowpay-"I want you to reseat these trousers you made for me some

Tailor Very good, sir: but the bill for these trousers will have to be receipted first."

Depend on the Forest.

When a man writes his name, reads his paper, puts on his shirt, his nearsilk socks, his necktie, his shoes, his black suit, when he smokes his pipe, when he takes aspirin or quinine or when he takes acetanalid for a headache, when he goes hunting or to the movies, when he plays a phonographic record, when he uses his radiophone, when he paints his house, varnishes his floor, lights the fire, eats his sousages, he comes thto contact directly or indirectly with the chemical utilization of the forest. The chemistry of the forest, the chemical u'lization of wood, whether we know it or not, is part and parcel of our daily existence. The discovery of new uses for wood is keeping ahead of the discovery of substitutes for wood, which explains the necessity of governments and all forest authorities adopting a policy that will provide for the scientific handling of this great and rapidly diminishing

A curious lake in Ireland has the power of petrifying any substance that falls into it. While the petrifaction is not absolute, the substance is coated with a layer of stone which is found dissolved in the lake, and the stone then hardens and form

Fret Not Thyself

(Paraphrase of the 37th Psalm)

By J. Lewis Milligan

Because some men of guile succeed;

By cringing wile and crafty deed:

Nor in His righteous service tire;

God is the final judge of men, And He shall bring the truth to light:

And still be true to what is right:

Nor envy men of craft and guile;

They flourish has a feete waite.

Yea, thou shall look for them in wain—

The Lord shall yet thy worth proclaim

He shall give thee thy heart's desire:

They shall be cut down like the grass,

Fret not thyself, O troubled soul,

Nor envy those who gain control

And as the stubble they shall pass.

Trust thou the promise of the Lord,

He will not fail to keep His word,

Commit thy ways unto His will

And He shall all thy dreams fulfil.

Go thou thy way in patience, then,

And put thy enemies to shame.

Fret not, O fired and troubled soul,

Hold thou thine anger in control,

Good for Trade.

The aim in handling timber on Do- laugh if you asked him to buy a bot- with a hem. Womanis Interests

IN ORDER

The usefulness of a sewing-machine is surpassed only by the abuse it will stand. Yet it appreciates and pays, in prolonged service and greater ease We used to have a pretty house, before in operation, for any care given it, and the sewing will be less of a task But if the machine is in apple-pie order. gone over by an expert, but if such a For person is not available, give the machine a good overhauling yourself, And cleaning and oiling it thoroughly.

Kerosene will loosen any gummy substances which may form, a crochethook will enable you to remove lint, and a small paint brush will dislodge the dust. After the gum, lint and dust have been removed, oil the machine freely, using only the best quality of machine oil. After oiling, lift the presser-foot and run the machine long enough to spread the oil. The ma- | Here stands a tennis racket, with chine should then be allowed to stand without using until the oil penetrates to every part; evernight is not too long. Next day, start the machine again, with the presser-foot up at first, then drop the presser-foot with a piece of muslin under it, stitch back and forth over the muslin, which will receive the excess oil. Remove the excess oil from other parts with a soft
