Crossing Again Takes Toll.
BRANTFORD, April 23. — The

COMPANY LIMITED

dly level crossing took further toll s on Saturday, when, in the Gen-Hospital, little Arthur Dawson ipine Livenue, Hamilton, died, wing diffuries received when a rom Hamilton was struck by a d Trunk train Saturday after The crossing was the one at

former tollgate on the Paris road, four miles from the city, a point where the raflway runs through cuttings, necessitating a dip in the road at the place. As a result it is impos-sible to see if the tracks are clear until a car is practically on the crossing itself.

There were five in the party, Thomas Evens and Herbert Laughton being seriously injured, though they were to day reported to be doing well at the hospital, while a man and a woman in the car escaped with minor injuries.

The spot is notoriously bad, a setality having been reported last year, while there have been innumerable accidents that did not result im death.

Under the Highway Department plane the crossing was to be abolishof this year. It is not certain that this will be done, however, as the county of Brent is opposing construction of the road.

Results of Co-operative Experiments on Outario Farms.

Over Eighty Farmers Have Experimented-Rape for Perennial Sow Thistle and Twitch Grass-Eradication of Bladder Campion and Cow-Bell.

(Contributed by Ontario Department of Agriculture, Toronto.)

In 1911 experiments were begun with the object of gathering data from which definite statements might be made regarding the best methods of controlling the various bad weeds. of the Province. In this connection over eighty farmers have carried on successful experiments on their own farms under instructions sent from the Director at the O. A. C., Gueiph. The weeds experimented with were Perennial Sow Thistle, Twitch Grass, Bladder Campion or Cow Bell, Wild Mustard, Ox-Eye Daisy, Field Bindweed, Wild Oats and Chess. In nearly every instance they cleaned he field experimented with, and demonstrated to their own satisfaction the effectiveness of the method tried. As a result of the data gathered rom these experiments it is now possible to recommend with confidence definite methods for the eradiction of such weeds as Perennial Sow Thistle, Twitch Grass, Bladder Campion and Wild Mustard.

The Rape Method for the Control of Perennial Sow Thistle and Twitch

Cultivate the field until about the middle of June, running over at frequently with a cultivator so as to keep the tops down and thus weaken the "roots." A cultivator with broad points should be used, which will cut off the Sow Thistle or Twitch Grass below the surface of the ground and not break up the rootstocks toc much. About the middle of June apply manure at the rate of about twenty tons per acre (twelve good loads.) Cultivate the manure in thoroughly and with a double mould board plough slightly ridge up the land, making the ridges about twenty-six inches apart On the ridges sow pasture rape (Dwarf Essex variety) at the rate of about one and a half pounds per acre. It is important that the right amount of rape be sown for if too little is sown the stand will not be thick enough to smother the weeds; and if, on the other hand, too much is sown the rape plants will be too crowded and now grow vigorously enough to keep ahead of the twitch grass or sow thistle. Sow the rape when the land is sufficiently moist to secure quick germination of the seed. If the rape is slow in starting the twitch grass or sow thistle may get a hold in the rows and thus necessitate hand cul-tivation. Cultivate the rape every week or ten days until it occupies all the ground and makes further cultivation impossible. If, when the rape is cut or pastured, any of the weeds remain, the field should be ridged up last thing in the fall and put in with another heed crop the following year. This has not been found no cessary when a good stand of rape dreds of horses suffer each year, has been secured.

Cow Bell. Badly infested fields should be ploughed deeply in the fall and then cultivated and cross-cultivated with a broad-shared cultivator in order to break up and weaken the underground rootstocks. In the spring this cultivation should be repeated frequently enough to prevent the plant making any growth above ground until it is time to put in a hoed crop, which must be kept thoroughly clean in order to be effective. or a sore the the necessity of adjustboth ways has been found to give justs the hoot or his toot to set excellent results. Special attention must be given to hoeing out any thoughtful driver will do the same until they slough and fa bladder campion plants which may for his horses; but unfortunately appear in the corn crop and which there are many drivers who neglect are not destroyed by cultivation. One to give their borses all the attention fall and one spring's thorough cul-tivation followed by a well cared for Collars mag at the horse's shoulders hoed crop has been found to destroy in the spring when the animal is in practically all the bladder campion good condition, but the shrinkage of

Iron sulphate or Copperas can be

successfully used to destroy mustard in standing grain without injury to the crop. A 20 per cent. solution should be applied. This can be prepared by dissolving 80 pounds of iron avoided. sulphate in forty gallons of water. Iron sulphate is dissolved quite readily in cold water. The solution should be strained through a cheese cloth, as it is put into the spray pump This will remove dirt and small particles that are apt to clog the nozzies.

Apply on a calm clear day just as the first few plants in the fields show flowers. It is very important to spray early. If the plants are left too long the treatment is not nearly so effective. If a heavy rain comes within twenty-four hours after the solution s applied, it will be necessary to spray again.

How to Apply the Solution. sprayer, such as is employed to spray fruit trees, may be used, or a potate sprayer can be rigged up to do this work. Many of the up-to-date sprayers have a special proadcast attach- and becoming used to the collar. Frement for spraying weeds. These are excellent for large areas, as they cover a wide strip at each round. are very essential in preventing Care must be taken to see that every shoulder soreness. Mustard plant is covered with the solution in the form of a fine spray. -J. E. Howitt, O.A.C., Guelph.

Girl Sends Seven to Death. MOSCOW, April 23.-A bobbedbeired young woman in her early twenties sat as presiding judge at a trial in the Moscow District Court Saturday, and in a calm voice sentenced seven men to death for robbery with wiolence. She was Citiseness Anna Glusmann, formerly of Kharkov, who several months ago so attracted the attention of the Commissariat of Justice by her shrewd decisions in the Ukranian courts that she was invited to Moscow, and be-came a member of the Presidium of

the Moscow District Court. The defendants were a gang of highway robbers, all young, who carried out armed robberies in clothing trouble ve tories last March. They admitted their guilt.

Montreal Street Car Conductor Narrowly Escaped Lynching

He Was 14 Charge of Car That Ras Down and Killed a Little Boy. The Augry Crowd Threatened His Life and Passengers Had to Protect lim. - Almost a Double Trage ....

MONTREAL, April 23.—Frenzied applied to designate a conwith horror at the sight of the unre- sisting of the protrusion of lievable sufferings of a boy of two of the intestine or bowel and a half years, Haimie Dinnerman, sbdominal cavity through a who had failen across the car lines or abnormal aperture of the on St. Lawrence boulevard Sunday inal wall, which protrusion sh night as a speeding car rushed upon presence by a lump or tune him, and who iay under the car with his leg almost severed at the hip, a large crowd which had gathered at the spot of the tragedy made repeated efforts to lynch the conductor of the car.

Shouting threats and imprecations, men in the crowd hurled themselves time after time on the car, and only the courage of its occupants, who formed themselves into a solid mass to resist the capture of the car, in all presence becomes noticeable by the probability saved the conductor's life. At the risk of being beaten to death he succeeded at last in rushing over doubt exist as to whether the coathe road into a nearby restaurant, the dition is actually one of rupture, its proprietor of which at once locked true nature can be readily determined his doors and notified the police.

strong squad of police, who used their batons freely, saved the situation. The conductor was got into the feit as an oblong or ring like opencar again, and rushed it from the scene of what had nearly been a double tragedy.

At the time of the accident it was found impossible to release the victim from beneath the wheels, and it was necessary to wait until the car could be jacked up. The child was rushed to a hospital, but died before it was reached, having bled almost to death before he could be rescued. The conductor suffered a bruised nose and had his clothes almost torn from his body in the melee.

Ill-fitting Collars Cause Much Suffering to Horses.

Shoulder Gails Are Developed ing the Collar in Water Helps to Reshape It-Bathe and Dust the Gails-Hessian Fly Control,

(Contributed by Ontarto Department of

A collar that does not St the sorse's neek and shoulder perfectly may be the cause of considerable suffering to the animal through sore ness, galling, and blistering. Hunmore especially during the period of

Shoulder gails develop largely through the use of collars that do not fit properly, through the draft being too high or too low, through neglect on the part of the driver to keep both collar and shoulder clean. When a teamster develops a blistered heel well cared for corn crop planted ment is fully and painfully apparent in hills so that it can be cultivated to him, so he fusses around and adrelief for himself A humane and then allowed to remain i in a field except in exceptionally wet fiesh due to the hard work of several months may leave the horse with a Preventing Mustard Seeding In collar much too large. The collar that is too large or not of the correct that is too large or not of the correct shape is bound to cause trouble. Sore neck, sore shoulders or unnecessary

pain that may develop viciousness or other bad habits or reduce the efficiency of the horse, should be A Horse's Haul Is Bone From the

Shoulder

The work that the horse has to perform is done from the shoulder, so it is very important that extreme care be given to the fitting and adjustment of the collar. The new colar is generally so firm and stiff that it is difficult to mould it to the shape of the horse's neck and shoulder without soaking it in water over night. After soaking a collar of the proper size in three inches of water, face down until well wet, it may be placed on the horse. The hame straps should be adjusted to draw the collar snugly to the neck. The collar An ordinary hand pump barrel into shape to suit the horse's shoulin its softened condition will press der. Be sure of the adjustment of the hames and draft. Work the horse only moderately the first few days while the shoulders are hardening quent airing and bathing to cool the shoulder and remove sweat and dust

Dealing With Mis-shapen shoulders Horses that have mis-shapen shoulders can only be given relief by being fitted with a collar or collar pad made to suit the requirement of a special case. As hour's work on a collar pad with thread and needle in the hands of a burnane teamster will save a faithful house much pain. If your horse is suffering from shoulder galls, adjust the draft or shape the collar or collar pad so as to remove the pressure of draft from the sore point. The horse's shoulder should be watched during the day when at heavy work, especially during hot weather. Bath with sait water each evening, and treat the galls with a dusting of sinc oxide. If the horse is so fortunate as to be in the hands of a good 175 or teamster it is not likely trom shoulder emember, the horse cann ad make com-

occurrence of this disease in ag animals seems to be larsely seed by unfavorable conditions of ie, inducing impaired nutrition of body. In particular there appears he a lack of bone development, due to a deliciency of lime salts and other bone-forming elements in the body. Lack of exercise and close confinement in damp quarters are predisposng influences and are a cause of the

In pigs the disease occurs generaly soon after weaning time and particularly in litters born during the ate fall and winter months. At this ime, improper feeding of the young pigs associated with exposure to inclement weather and close confinement in cold damp quarters combine in accentuating the tendency towards faulty nutrition and ill-health, which are forerunners of Rickets. The feeding of young pigs excessively on corn and also keeping them exclusively on a sloppy diet of buttermilk s at times responsible. In some cases there appears to be an inherited lendency in litters, due possibly to errors in the management and feeding of the sow while pregnant, and after farrowing. Symptoms.

In the case of calves and colts becming affected with Rickets, they appear unthrifty and develop imperfectly. The bones of the legs become see ened so that they gradually bend and become distorted, causing the animal to be bow-leaged and enlarg- give the novs : ed at the joints, and otherwise unsigntly shaped. They are prone to lie Heiping the Tounet. down a great deal of the time, and in walking they move stiffly. asc chone also becomes crooked in

some cases. Young pigs frequently secome affected and, at first, appear to thrive poorly and have an abnormal appetite. This causes in them s'craving for dirt and to keep picking up and chewing pieces of stick and aes. They soon begin to develop aba. mally and disproportionately, while remaining stunted in growth. They become pot beilied and the head enlarges, giving it a bulging appearsince, with the snout deformed, hence name "Bullnose" being used. may also breathe with a snufund, while the head remains

he skin often becomes thick-4 cracked and gets discolored lirt, giving a black sooty suce to white pigs. Sooner or he bones of the legs begin to and and they become deformed. This eauses the less to become badly bowed and makes them walk very stiff savings enabled him to hug, and his and awkward. The joints become enisrsed and the pigs lie down a great resting on their knees. ends of the ribs also become zed and seem to bend inwards the body. At times many of rickety pigs become troubled

prevent the occurrence of one of the chief essentials taining a proper mode of livr the mother while pregnant the young during early life. ntails rational dieting accordo their needs, combined with able living quarters and a able amount of regular exerd outdoor life in fine weather. case of colts being raised artiay on cows' milk, it should be with about one-third water cetened with a little sugar. In e of pigs they must receive diet after being weaned.

should not be fed exclusively corn, nor on chopped oats composed largely of the hulls, nor entirely on buttermilk. In winter, young pigs should be given a clean, dry, warm, place to sleep in and the bedding should be changed daily. This is particularly essential in the case of late fall and winter litters. The diet should be suitably balanced and consist of a mixture of ground oats free from hulls, corn meal, ground barley and shorts with a littie sait, chaik and charcoal added from time to time. The feed should be siven mixed with milk or water as a thick slop. A little ground oil cake or bone meal and skim milk is also good. As the pigs increase in size the diet can be gradually changed. They should be allowed plenty of range and pasture in summer. When young pigs are noticed showing a tendency of developing Rickets, the progress of the disease can often be arrested and a complete recovery obtained, if taken in time, by changing and supplementing their diet with tonics. The diet should be arranged as already described, with the addition of some digester-tankage and oone meal. To the drink can be added lime water and to the feed a tonic composed of sulphate of iron one part, bicarbonate of soda and enarcoal four parts. These ingredients are mixed thoroughly togethe: and a spoonful of the mixture added to the feed allowance of each pig once or twice a day. In cases of pronounced Rickets in pigs, where they become chronic runts, they are not worth treating and should be got rid of.—C. D. McGilvray, Principal, Jutario Veterinary College, Gueinh.

Brug Cases Are "Frame-Ups." ritional Disease Affecting How the Ontario Loan System Heips Farmers.

An Interesting Illustration Given-Helping the Tenant-Some Applicants Disappointed — Inspectors

Are Carefully Selected.

To help young men of farming inadequate capital to get properly for this purpose.

How It Worked In One Case.

In one of the best Western Ontario counties two loans were placed which illustrates the finest development, in disease occasionally in foals and Ontario farm life. A father, for many years a progressive and successful farmer, was anxious to get his two sons comfortably located. Both boys were in their twenties and both married. Both had been brought up on the farm, and of the older it said he "worked on the farm all his life except while away at the war.' With the aid of the father and loans, only about half the value of the property; both boys acquired farms. One has a farm of 185 acres, valued under \$20,000, with excellent buildings and full equipment of stock and implements. Adjoining, the other boy has two hundred acres, not vained quite so high because the buildings are not quite so good. He also has are sente: father remains in his home nearby to benefit of his experience and materer wisdom. It should by the ambition of every

> the land he works. That many tenants ent reain this ambition there is no doubt, and it is only a question of accumulating sufficient to mance the 35 per cent, not advanced by the Board: The tenant has the necesmary stock and implements and is all ready to go ahead. There comes to mind a case in one of the Central Ontario counties. The man was livsell at a pretty reasonable price. The with the sale of these delicacies so tenant came to the Board, and the the summer tourists will be able to loan he was able to get with his own get them without trouble.

man who works on the land to own

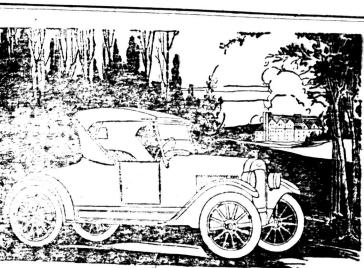

annual payments on the loan will be less than the annual payments he was making in reut. The Disappointed Ones. Not all the loans asked for are

granted. The loans thus far asked for and refused by the Board aggregate \$284,000. At one Board meeting nine applications were passed and thir-teen refused. Undoubtedly the great bulk of these were declined because they did not come within the purposes permitted by the Act. In (Contributed by Ontario Department of the first place no loan can be made except on the security of first mortgage. Before the legislation of the experience, farming inchination and to discharge mortgages had to be declined. Now a number have to be settled in farming was one of the declined because they exceed 40 per reasons for the new farm loan legis- cent. of the value as determined by lation now being administered by the the inspector. Not infrequently an Agricultural Department Board. Al- applicant who comes within the 40 ready it is possible to point to cases per cent. limit wants an additional where monies have been advanced thousand dollars to discharge "a note for this purpose. at the bank," and thus consolidate his indebtedness. But an "encumbrance" under the Act must be "a registered encumbrance," and the bank note does not qualify, however deserving the applicant or unquestioned the security. Semetimes an applicant wants a few thousand dollars to buy cattle for feeding, but the same negative must be given. Then there are the cases which are rejected because the Board is not satisfied with the personal or material security offered. When such conclusions are reached they are reached with much regret, for the Board is genuinely anxious to promote agricultural development by means of these loans wherever it can possibly be done with due regard to reason-

able security to the Provinc Inspectors Are Carefully Selected. In view of the importance of having this information complete and a full equipment of stock and im- securate, great care has been exercised plements. The properties are regis- by the chairman in selecting intered in the names of the boys re- spectors. The plan followed is to spectively, and they are responsible utilize local men very largely, not for carrying on operations and making payments on the mortgage. They at least one in a district of two or three connues. Already a list of fifzens, with a splendid opportunity for teen or twenty men of integraty, happiners and success, and enough good judgment and good knowledge of farm values based on long expertime, the lence has been secured and payment is made on a basis of the number of days actually employed in the work. Moreover, steps are taken from time to time to check up the work of inspectors by information from other sources, and if an inspector is found to be extravagant in his valuations or influenced by considerations other than the strict merits of the case, his services are no longer utilized
