

...that finds favor.

...ary-living-room should have as many nooks and corners as possible. Recesses make for charm and coziness and architectural interest anywhere, but in a library-living-room where several groups are carrying forward their independent interests, they are almost a necessity.

A library may be made an important factor in the character of the growing child in the household. Its dignified simplicity, its inviting atmosphere create an environment that leave its mark and it should be thoughtfully considered in the planning of every real home. A place quiet and dignified, removed from the urge and stress of the household, where one's thoughts may have a chance in this hurrying world, where one may really settle down with oneself and be at rest—the library should be such a place.

Dress Up the Linen Closets.

If you wish to impart to your home an atmosphere of completeness and thorough self-respect try trimming your closets.

There isn't a nook or corner in the house that isn't improved by a little dressing up. Even closet and cupboard shelves grin back and fairly shout "thank you!" for a bit of appropriate trimming. Making cubby-holes attractive is the easiest thing in the world and pays 100 per cent in satisfaction on the time and money invested.

Take the linen closet, for example. This is usually a bare white place of stark, paper-covered shelves. It requires only a touch to transform it into a beautiful spot worthy of its character. Assuming that its walls are white and that the shelves are covered with white paper or oilcloth, it requires only a few yards of Woolworth cluny tacked along the edges of the shelves to make it as feminine and dainty as a linen closet should be. The real touch of trimming genius, however, demands that each brass tack that holds the lace in place shall be covered with one of those tiny chiffon buds sold by the yard at trimming counters.

The inside of the linen closet door provides an excellent place for a wall pocket, subdivided into sections of various sizes suitable for holding the household linens which are being

Paradoxical as it may seem, the kitchen is the real place for frills. If you doubt it try applying to the edge of various open shelves in pantry, and in the kitchen proper, narrow, perky little ruffles of checkered gingham to match the curtains or the colors in the linoleum. As an antidote to the drudgery of peeling potatoes and washing dishes their bright, crisp freshness cannot be surpassed. But keep them immaculate.

Dye Old Wrap, Sweater, Curtains In Diamond Dyes

Each package of "Diamond Dyes" contains directions so simple any woman can dye or tint her old worn, faded things new. Even if she has never dyed before, she can put a rich, fadeless color into shabby skirts, dresses, waists, coats, stockings, sweaters, coverings, draperies, hangings, everything! Buy Diamond Dyes—no other kind—then perfect home dyeing is guaranteed. Just tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton or mixed goods. Diamond Dyes never streak, spot, fade, or run.

A Puzzle.

"I beg your pardon, sir, but what is your name?" the teller politely asked the man presenting the cheque.

"Name," echoed the indignant customer, "don't you see my signature on the cheque?"

"I do," answered the teller. "That's what aroused my curiosity."

NURSES

The Toronto Hospital for Incurables, in affiliation with Bellevue and Allied Hospitals, New York City, offers a three years' Course of Training to young women, having the required education, and desirous of becoming nurses. This Hospital has adopted the eight-hour system. The pupils receive uniforms of the School, a monthly allowance and travelling expenses to and from New York. For further information apply to the Superintendent.

...then they had stood among the and beneath the white moon pledged their faith.

Again his head went up, and the old light flashed in his eyes. "The first thing is to kill the wolf," he said aloud. "No other innocent shall fall to his fangs. Then—my country."

Darkness had again fallen before Dave found his car threading the streets of the city, still feverish with its new-born excitement of war. He returned his car to the garage; an attendant looked up curiously—it was evident from his glance that Dave had already been missed—but no words were exchanged. He stood for a moment in the street collecting his thoughts and rehearsing his resolves. He was amazed to find that, even in his bitterness, the city reached a thousand hands to him—hands of habit, and association, and custom of mind—

...back into the old "The routine is the spoke in the wheel; go the rest of us."

...nded himself. "No, I have business on hand."

...d that he had given Irene. And suddenly she came again at the tea table was he? Yes, he had never to Irene. Well, there was a shadow in his room. First to kill the wolf.

In the hallway, of the block in which he had his bachelor apartments Dave almost collided with a woman. He drew back, and the light fell on his face, but hers was

UNCOVER ROMAN PAVEMENTS IN ENGLAND.

A very beautiful tessellated Roman pavement has been recently discovered in Colchester, England, an important find related to the period of Roman occupation of the British Isles. It is in perfect condition, as the picture shows.

Tre

By Der... the... ovi... plan... Manitoba... The plan is a co-operative Government supplying the seedling trees free, except in the case of evergreens, and giving instructions for their planting and care, while the farmer provides the labor, prepares the land in advance, and agrees to keep it permanently in trees. The results of the scheme have, as indicated above, been most satisfactory, and the work is extending year by year. The kinds sent out are chiefly Manitoba maple, poplars, willows, green ash, and caragana. Those interested will receive full information upon applying to the Superintendent of the Dominion Forest Nursery Station, Indian Head, Saskatchewan, or to the Superintendent of the Forest Nursery Station, Sutherland, Saskatchewan.

The United States lost two billion dollars by strikes in 1921.

Dredging

A considerable proportion of placer gold that comes from the Yukon Territory is mined by means of dredges, some of which are among the largest in the world, capable of excavating and treating 15,000 cubic yards of gravel per day. These dredges are operated by electric power and have been found to be most satisfactory. The period of operations is not confined to the short summer season prevalent in that district, as they can operate long after winter has set in. On one occasion a dredge operating on the Klondyke River was maintained in operation all winter. There are six dredges used for this purpose in the Yukon Territory. These are located at the present time on the lower part of the Klondyke River, on Hunker creek, Gold Run creek, Dominion creek and Hight creek. In order to mine the submerged beds of rivers and lakes in the Yukon Territory, the Department of the Interior, Canada, introduced dredging regulations, under which dredging leases for such areas are issued. There are about nine such leases now in force covering river stretches in the Yukon Territory, and the total revenue derived from this source to the 31st of March, 1922, amounted to \$191,307.52.

A Technical Explanation.

Two commercial travelers on a train became involved in an argument as to the action of the vacuum brake.

"It's the inflation of the tube that stops the train," declared the first traveler.

"Wrong, wrong!" shouted the second. "It's the output of the exhauster!"

So they wrangled for an hour. Then, when the train pulled into the station, they agreed to submit the matter for settlement to the engineer. That gentleman, leaning from the window of his cab, listened with an attentive frown to the two travelers' statement of their argument. Then he smiled, shook his head, and said:

"Well, gents, you're both wrong about the working of the vacuum brake. Yet it's very simple and easy to understand. When we want to stop the train we just turn this handle...

...pulp and paper industry. By means of work involving many thousands of measurements, an approximate average fibre length has been determined for several Canadian woods. The fibre length differs considerably according to species—fibres of balsam fir, for example, being about half the length of those of Douglas fir.

It is of interest to note that in the species studied the length of fibres increased in each successive annual layer of wood during the fifty years of the tree's growth. At the fiftieth annual ring the fibres showed no further increase in length. Furthermore, the length of the fibres was found to vary according to their height from the ground. The longest fibre in the tree usually occurred at a height of about 15 feet in the vicinity of the fiftieth annual ring.

Germany is the chief purchaser of cow hides from India.
