**BANK OF HAMILTON**  
 JARVIS BRANCH—J. H. Brown, Manager  
 Nanticoke—Tuesday and Friday

But the battle of the franc is still on. It is a war of attrition in which millions of dollars are employed daily by the generals of high finance. The franc is now fighting in its Hindenburg line where the gain or loss of a few points has immense strategic significance.

The French Government, realizing collapse of the franc would advertise the fallacy of its Ruhr policy, has been selling foreign securities abroad and buying francs in London and New York to hold up their value. Perhaps this is like the Germans who held their ground on the Hindenburg line, but bled to death doing it, knowing that when three more miles were lost, rout could not be stopped.

The issue of the battle of the franc is doubtful, at least to the casual observer, and those who know the side of this struggle are few. Fewer probably than those who, when the forces engaged, the battle raged, and the battles of the war four years ago.

**Driver BRANTFORD**  
 Losing control of his car, he skidded into a ditch and was thrown out. He was not injured.

He was working for Johnson Bros. At the Langford culvert the car skidded, jumped the culvert and hit the ditch. It was feared that Donohue had broken his back and neck, but he lived until Sunday afternoon. Fairchild was only badly shaken up.

France has a new monster gun for coast defence.

**Make it your duty to make the sky look bluer and the sun shine brighter for all those with whom life brings you in contact**

**Canadian Money Orders Raise Suspicion in the United States.**

WASHINGTON, Jan. 22.—The Post Office Department has issued a general warning to American hotels and business firms to refrain from cashing Canadian post office money orders for unidentified strangers.

According to the information received by the Department a wholesale fraud scheme is being carried on against Americans by Canadian crooks, who buy money orders in small amounts in Canada and raise them to larger amounts before having them cashed in the United States. Canadian authorities are co-operating with those of the United States in an effort to apprehend the men responsible for this new effort to fleece the American public.

The Department says that Canada for several years has been the base for post office confidence schemes against American citizens. The most successful was the sale of "Canadian diamonds," which were sold to Americans upon payment of a small sum of money.

The money order scheme is a new plan to secure funds surreptitiously, and its use is being discouraged by the "Canadian diamond" scheme has ceased to pay.

**Land to Be Reclaimed.**

THE PAS, Man., Jan. 22.—Three survey parties connected with the Information Branch of the Department of the Interior, under the leadership of Engineer G. E. ... have just returned here from the Carriot River Valley Tri- ... The end of the drainage data secured will be compiled and submitted to the government for consideration.

Years have now been spent in gathering information on the reclamation of some 800,000 acres of the Carriot River Valley, which is reported by these engineers to be the richest and most fertile soil known in Western Canada.

**May Mean Short Winter**

MILTON, Ont., Jan. 22.—Residents of Trafalgar township report seeing a much larger number of robins and meadowlarks remaining here this winter than in any previous year.

A gentleman tells of a flock of meadowlarks which remained in the area and are seen daily. They do not seem to be affected by the sharp winter weather.

Some prophets predict a short winter.

**Honey and some of its Uses :**

Honey is the nectar of flowers gathered and modified by several insects, especially by the honey bee. Chemically, honey consists of sugar about 75 per cent., water 18 per cent, with small quantities of mineral matter and other substances such as protein; acid and volatile oils. Very little, about 1 to 2 per cent., of the sugar contained in honey is sucrose and levulose or invert sugars produced in the first stage of digestion of sucrose. The two invert sugars are present in about equal proportions, but may slightly according to the source of the honey. Sometimes the sugars separate and we find the dextrose granulated in the bottom of the containers while the levulose remains liquid on top. Honey varies in color from the different sources; thus we have a waterwhite honey flowers and fireweed, amber honey from dandelion and fruit bloom; while from buckwheat it is very dark, almost black.

Honey is usually marketed in two forms comb honey and extracted honey. Comb honey is a fancy product and appeals to many consumers because of its natural appearance. Sections filled with the white honeys are most desired. Extracted honey is produced more economically, as the honey is removed from the combs by centrifugal force and the combs are

again use. Extracted hodey is usually put up in half pound and one pound bottles or two and one half, five, ten, thirty and sixty pound tins. Practically all honey produced in Canada granulates soon after extracting but this does not affect its quality in the least but makes it easier to handle. The idea that granulated honey is adulterated is erroneous. Granulated back to its liquid state by gently heating to 155 degrees Fahrenheit, a higher temperature than this is likely to darken the honey and affect its flavor.

Honey should be stored in a dry place, as it readily absorbs moisture which in turn will cause fermentation.

Honey is a food which produces heat and energy. It is in concentrated form and ready for use at all times. There is no waste, as well ripened honey will keep in good condition for a reasonable length of time provided it is stored in a suitable place. Honey is an excellent food for children and adults and should find a place in the daily menu; it readily takes the place of jams or preserves or as an ordinary spread upon bread.

In cooking, honey can be used instead of sugar and has the advantage of keeping cakes, bread and biscuits fresh and moist for a long time. Honey also gives satisfactory results when used in making cookies, candies, ice cream, etc., and for sweetening fruit drinks such as lemonade

it can also be used for preserving certain fruits. An excellent wine can be made from honey and it is also one of the chief constituents of cough medicines and other remedies.

**A Deserved Diploma-- Certificate of Health**

Miss M—lived in the Ottawa Valley, not far from the capital, with her mother and young sister. Work seemed the natural thing when she left school, and, accordingly, she started out to get what she could for her services. Progress was not fast, but at least she did not stand still, and her earnings were always increasing.

With such prospects it seemed that her little sister could get the chance that she had been denied—a University education. The baby of the family went to Queen's, and this year, her alma mater gives her the degree of Bachelor of Arts. Next year she's going to do better—Master of Arts. But here's where the sadness comes in. The elder sister, broken in health by overwork, is no longer able to assist. She is a patient at the Muskoka Hospital for Consumptives, but it is hoped that she too will shortly graduate—with "A Certificate of Good Health."

Seventeen thousand patients have been cared for by the National Sanitarium Association in its hospitals in Muskoka and at Weston. Half of them have been restored to health and happy homes. You can share in this great work if you will.

Contributions may be sent to Hon. W. A. Charlton, 223 College Street, Toronto.

appointment.  
 Three Size 32

They are from good material, well lined and well made: storm collars, belted styles. On Sale, choice \$4.95.

They cost nearly three (3) times \$4.95 to produce.
