quarters in the fall they should all bright, warm day in October should staying the week. be chosen and the dipping done in the morning so the wool will have time to dry before night. It is safe to say that fall dipping of the flock should never be neglected. Even in those flocks that are supposed to be clean it will pay. In case any sheep are to be added to the flock they should always be dipped before being taken in with those that are already clean, so says the Department of Animal Husbandry, O. A. C. The Way to Use the Dip. There are several different brands

of which will give satisfactory results provided directions are carefully foilowed. The water to be used for dipping should be warmed and the mixture should be stirred frequently to prevent the heavier dip settling to the bottom. The sheep should remain in the dip for approximately two min-

> matched lumber. Ordinary lumber may be used and have the inside lined with galvanized iron. Strong galvanized iron alone properly constructed by a tinsmith will make a good vat, although possibly rather

expensive.

become thoroughly saturated.

Prepared as follows: 2 pints of Coal Oil 1 pint of milk

Mix thoroughly in an old dash churn -dilute to use by adding eight galions of soft water to each gallon of concentrated emulsion. If milk is not available, then use laundry soap, as follows: One half-pound of laundry soap in gallon of hot soft water, then add two gallons Coal Off (while hot), churn up well and then dilute in Dunnville. to use by adding eight gallons of soft water to each gallon of conce

Dip the sheep after shearing and repeat in two weeks to get the pupae. Dept. of Extension, O.A.C., Guelph.

Poultry Parasites

A long winter generally means a weakened vitality to all animals, and anything that can be done to remove obstacles and supply the essentials should be done. One of the great obstacles to successful poultry husbandry is the invasion of intestinal parasites. These creatures flourish within the birds winter or summer, taking their toll unseen and irrespective of weather conditions. They are worse than potato beetles, which are honest enough to do their mischief in plain view, and work just eight hours a day for but six weeks of the year. The intestinal parasites infesting poultry have a union code of their own-"24 hours per day and 368 days per year, get all you can, why worry about the poultry-keeper's prefits." At the O.A.C. the intestinal parasites infesting the poultry flocks were banished for good and forever eighteen months ago. How was it

The Method.—A gallon of a mixture of wheat and oats, to which is added a small teaspoonful of concentrated lye, is cooked slowly for two hours and allowed to cool. The birds are given their ordinary feed one morning and then nothing else until the next morning, when they are given as much of the lye mixture as they will eat, with pienty of water. This is done two or three times during the season at intervals of one

The large, round worm infesting poultry may be as short as one inch, and the cæcum worm only threetenths of an inch, and one of tape worms only one-fiftieth of an inch long. Very easy to overlook.—L. Stevenson, O.A.C., Guelph.

Treatment for Bot Fly Larvae.

Heavy infestations may cause indigestion. Give the horse a chance; help him to be comfortable by removing the too numerous bot fly larvae from his stomach. Fast the horse twenty-four hours

and give three capsules of carbon bisulphide, to be given one at a time, at three hour intervals. The larvae generally pass from the stomach in June; go into the soil for six weeks and then re-appear to start

their devilish work over again -Dept. of Extension, O.A.C., Guelph.

Mineral Mixture.

The following mineral mixture is used in the swine feeding at the Ontario Agricultural College. It is giving good satisfaction:

4 bushels Charcoal or Hardwood Ashes. 8 pounds Salt. 2 quarts Air Slaked Lime. 1 pound Sulphur. 10 pounds of Bone Meal. This preparation is kept in a suit-

able box in each pen where it may be aken by the swine at will. Keep plenty of pure water bei
