LOCAL & GENERAL

(Continued from Page 1)

Walker, east of our village, are attending the Robinson Business College of Waterford.

On Tuesday evening occurred the death of Mr. and Mrs. W. Forsythe's little 6-months-old baby girl. The funeral took place on Wednesday.

Mr. and Mrs. J. McLean, of Winnipeg, who are motoring through on their honeymoon, were the guests of Mr. and Mrs. J. J. Parsons last week.

Dr. Nicholson, Osteopath, of Simcoe, will be in Jarvis on Mondays, Wednesdays and Fridays. Office in D. Steel's residence; hours: 8:30 a.m. to 8 p.m.

Mrs. Little, of Portland, Oregon, and Mrs. Southward, of Beamsville, while visiting relatives in town were the guests of Mr. and Mrs. John Thompson.

The Jarvis Women's Institute are packing a barrel of fruit for the Sick Children's hospital. Will all those wishing to donate please leave at Mrs. Shaver's.

Rev. Dr. Arthur Kerr Cressy, formerly of Jarvis, was struck by an ambulance in Rochester, N.Y., on Thursday last. He was taken to the Highland hospital. We were unable to learn the nature of his injuries.

FEDERAL ELECTIONS TO BE HELD THURSDAY, OCT. 29

RICHMOND HILL, Sept. 6.—In his own Riding of North York Premier W. L. Mackenzie King yesterday announced the dissolution of the 14th parliament of Canada, with a general election on October 29th, and enumerated the reasons for appealing to the people at the present juncture, thus laying down the platform which the Liberal Party will offer to the country in a bid for a renewal of the reins of office.

In the first place, Hon. Mr. King, with considerable argument, stated that the Conservative party was in a measure responsible for the trip taken. He had no doubt, he said, about the ability of the Government to carry on, times were improving and there was no necessity to relinquish office until February, 1927. With an outlook, however, above party considerations the Liberals were looking to the general good of the country and it seemed time that an end should be put to Conservative allegations that times had been bad, which were injuring the Dominion materially, and in the eyes of the world. If the Government continued in power for another session it could only look for a continuance of this, he asserted, while obstructionist tactics might be expected on the floor of the House.

A second factor which had influenced the Government's decision was the railway problem. He did not favor amalgamation, neither did he favor excessive competition. He wished for the people's endorsement of a middle-course policy aimed at the elimination of needless duplication and unnecessary expense. Railway rates were already controlled, he said, so why not operation, with both sides being given fair play.

Linked with the railway problem was also the question of general transportation, more particularly on the ocean. The present Government, averred Premier King, was the only one with courage to face the present situation which existed here. Sir William Petersen's death had only postponed discussion of this subject. There was a great combine on the seas, the Atlantic Conference, and the policy of the Government was to tolerate no monopoly on land or sea. The Government intended to fight the combine, but it needed a strong majority for that purpose.

Thirdly, there was the fiscal problem. The Liberal policy was one of a tariff primarily for revenue. High protection, he declared, would split east and west and help break up Confederation. The intention of the Government, if continued in power, would be to establish an advisory board, not a commission, as suggested by Hon. Mr. Meighen. The recommendations of the board would come before Parliament for discussion and a middle course would be steered.

Finally, as the fourth major plank of the Liberal platform, was the question of Senate reform.

POISON IVY CONTROL

IDENTIFICATION, SYMPTOMS OF INJURY, AND SOME REMEDIES.

Look Out for the Three Leafed Climber—Grab Ont the Plants and Burn Them—Injuries Painful and Unpleasant to Sight—Remedies.

(Contributed by Ontario Department of Agriculture, Toronto.)

Many inquiries come to this Department regarding the identification of Poison Ivy, and the treatment of injury from the plant. The following is selected from "The Principal Poisonous Plants of Canada," by Faith Fyles, M.A., published by the Department of Agriculture, and from other sources:

Common Names.
Poison Ivy is also recognized under the names poison-oak, poison-vine and three leaved ivy.

Description.
Poison Ivy is a low shrub which is propagated by underground branches as well as seeds. It scrambles over stumps of trees or, as in the case of the variety radicans, it climbs by means of aerial rootlets to some height up fence posts and trees of trees. The long stalked leaves are divided into three distinct leaflets which are mostly ovate, pointed, entire or with a few irregular coarse teeth, bright green above, paler and slightly hairy beneath, changing to rich autumnal colors.

The flowers are small, inconspicuous, greenish or whitish, loosely clustered in the axils of the leaves. As the flower cluster is surpassed by the long-stalked leaves it is seldom seen unless the foliage is moved aside. The berries are greenish, white or cream colored, slightly shining round, smooth, with longitudinal ridges at intervals. The flowers are in bloom from April to June.

Distribution.
It is a native of Canada and is commonly found in hedgerows, thickets and dry woods from Nova Scotia to British Columbia, where it passes into a thicker-leaved and smoother form (R. Rydbergii Small).

Poisonous Properties.

Poison Ivy is the worst vegetable skin poison in America, hundreds of people being poisoned each year. The poisonous constituents have not yet been satisfactorily determined. Cases of poisoning are often reported where the individual has passed the plant without coming in contact with it. This has been explained by the fact that pollen grains, minute hairs and even exhalations from the plant are sufficient to cause eruptions on the skin of susceptible persons. The poison may even be carried on the clothing or tools of someone who has been in contact with it, or it may be that, as the effect of the poison does not appear for some time, the occasion of coming in contact with it may have been quite forgotten. On the other hand, many people handle it frequently with no ill effect.

Cattle can eat it with impunity, but dogs are poisoned by it.

Symptoms.

Inflammation of the skin begins to appear from eighteen hours to several days after contamination, and is characterized by intense irritation and burning, swelling and redness, followed by blisters and pain. Symptoms of internal poisoning are burning thirst, nausea, faintness, delirium and convulsions.

Remedy and Means of Control.

Many remedies have been suggested to allay this burning and irritation, one of the simplest being the immediate washing of the parts affected with good strong yellow laundry soap. On return from a day's outing where there was danger of meeting with poison ivy, the liberal use of such a soap might prevent much suffering, a piece might even be carried in the pocket.

An application of absorbent cotton saturated with a solution of common baking soda is simple and efficacious. In the case of severe poisoning the aid of a physician should be obtained.

Eradicating the Pest.

To properly eradicate this pest, the underground root stalks must be destroyed as well as the flowering tops. Grubbing out and burning it by someone who is immune to the poison is the surest means. Spraying with hot brine, or caustic soda will kill it. One pound of caustic soda to two gallons of water has been found most effective.

Bernard MacFadden has this to say on Page 2262, Vol. IV, of his "Encyclopedia of Physical Culture":

Poison Ivy and other poisonous plants named, common in America, owe their toxic powers to an odorless transparent oil that is found on the leaves, twigs and bark and is insoluble in water. It is classed among the irritant poisons. The person who comes in contact with the growth, suffers from cutaneous itching, swelling and vesicular eruption. In extreme cases there may be vomiting, colicky pains, fever and delirium. A portion of the whole body may be affected by the eruption.

Treatment.

A solution of acetate of lead applied to the itching skin, neutralising the poison is recommended by the U. S. Department of Agriculture. The patient should fast while the attack lasts. The free use of the emema, the drinking of large quantities of water, and wet pack sheets, are of value. Very high authorities also vouch for the claim that the irritating oil of poison ivy may be removed in five minutes through scrubbing with hot water and soap.

The hot school lunch has come to stay; it lets the stomach help the head.
