## LOCAL & GENERAL

(Continued from Page 1)

two weeks' visit in Jarvis and Chesapeake.

Mr. and Mrs. John Hair will be pleased to receive their friends on Tuesday, Sept. 28th, from 4 to 10 p.m., the occasion being their 50th wedding anniversary.

Mr. and Mrs. Chas. Wardell and daughter Carrie, of St. Catharines, and Mr. and Mrs. W. Vail, of Smithville, were the guests of Mr. and Mrs. E. A. Wright on Sunday.

Since A. H. Langraf's store received its new coat of paint it makes a very neat appearance. Of course this is late news, but for the latest, see his advt. on Page 4 of this issue.

Mr. and Mrs. Arthur L. Belbeck and son Harry spent a couple of days last week at Iona, and while there attended the funeral of the former's aunt, the late Mrs. Norris Hathaway.

## Here and There

That a new market has been found for Canadian lobsters, is shown by the report that twenty-six hundred cases of lobsters, valued at about \$75,000, were shipped to Sweden from Halifax, N.S., during the first week in July.

The gold mines of Northern Ontario are now realizing aggregate profits of a million dollars a month, according to estimates compiled at Timmins, Ont. There was a gross income of \$2,650,000 during the month of June.

Six hundred and twenty-four families from Great Britain and other European countries settled in the West on 187,000 acres of land, sold in the fiscal year ending May 31st, according to the records of the Canada Colonization Association.

Quebec is this year enjoying the greatest influx of tourists it has known for a considerable time. Hundreds of motorists, the majority from the States, are camped in and around the city, and the Chateau Frontenac reports capacity bookings.

During his tour of Western Canada Field Marshal Earl Haig passed through the town on the Canadian Pacific Railway which was named for him several years ago, for the first time. The Field Marshal, on learning his connection with the town, looked as pleased as though he had just won another famous victory.

According to the report of the Department of Agriculture, livestock marketings in Canada during the past year were the best experienced for many years. There were 975,020 cattle, 355,179 calves, 3,094,291 hogs and 485,606 sheep marketed in 1924, as compared with 882,921, 315,822, 2,363,402 and 512,390 respectively in the previous year.

According to J. M. Gibbon, secretary of the Trail Riders of the Canadian Rockies, who recently left Montreal for the West, the annual cross-country ride and pow-wow undertaken by that organization, is becoming so popular that lovers of the outdoors from England and Australia are attending this year, in addition to the members from the United States and Canada.

The "Beatty Boys," four British youngsters, brought out here by E. W. Beatty, K.C., President of the Canadian Pacific Railway, to study Canadian farm methods, arrived in Canada on the "Montcalm" this month. They are expert farmers selected by the Minister of Agriculture from the members of the Young Farmers' Club of Great Britain and will remain in Canada for two months as the guests of Mr. Beatty.

That elk, in the Panther River country, not far from Raft, are rapidly increasing in number and may possibly become a menace, is the opinion of Belmont Brown, an artist of New York who recently returned from a painting tour through the Rocky Mountains. Mr. Brown is regarded as an authority on wild animals and states that there will be, ten years from now, 10,000 elk in the district, unless steps are taken to decrease their numbers.

French-Canadian agricultural experts, theologians, apothecaries and others, touring the country under the auspices of the University of Montreal express unanimous amazement at the agricultural development of British Columbia, the scenery of Alberta, the produce of Manitoba, the beauty of Northern Ontario and the vastness of the country in general. A similar comment left Toronto recently under the auspices of the Toronto Publication of Canada also over Canadian Pacific lines, and will return the middle of August.

## FEED AND CARE OF COWS

DAIRY FARMERS IN SUCCESSFUL DAIRYING.

Dairy Cows Perform Double Duty in Supporting Themselves and Producing Large Quantities of Food Stuff for the Human Race and Must Be Cared For Accordingly.

(Contributed by Ontario Department of Agriculture, Toronto.)

There is too much waste in many dairy stables through owners not giving the cow a chance to do her work. Tied up all winter long, any feed that she gets must be brought to her; it is the raw material with which she works. The cow can not create milk out of nothing, so if the feed supplied is not sufficient for production then she will be as an idle machine in the factory, no production. Cows that are underfed never made any money for their owners, and might better not exist.

The successful dairyman treats his cow in a way that will insure health, comfort and production. Some fall because they stop after providing just enough to give health and comfort. They should go all the way and provide for production. The overhead is the same. Work the cow machine to capacity that she may give you a production, that will pay for feed, labor and also give a good profit.

A cow that yields 8,000 pounds of milk in a year produces within that period more food products than are contained in the entire body of a fat bullock weighing 1,200 pounds. While the cow is producing the 8,000 pounds of milk she maintains her own body and she also supplies the substances for the growth of her unborn calf. Quite a heavy task and all the energy used in the life processes comes from the feeds that are supplied to her, she cannot create anything, her function is to convert vegetable feeds to flesh and milk. When food is not supplied in sufficient quantity the cow is helpless. And so we see so many poor emaciated, starved cows during the winter. All of which would be willing workers if their owners could see the point, and supply feed in abundance that the animal could do the work of producing milk, butter fat and young.

The successful dairy farmer

1. Uses cows of dairy type, temperament and breeding.

2. Treats his cows gently, keeps them contented, in comfortable quarters and follows a regular daily round of feeding, cleaning and milking.

3. Weighs and records the production of each individual, discards those that fall after having a fair chance.

4. Feeds a clean, wholesome, well-balanced ration during the winter and good grass and clover with grain as needed during the summer.

5. Gives the cow a six weeks' vacation period with liberal feed allowances between lactations.

6. Provides comfort at time of calving, is prepared for milk fever, and mastitis. Feeds sparingly for first few days and gradually brings up to full feed in two weeks' time.

7. Provides light, ventilation, clean water and salt during period of stabling.

8. Protects his cows from the cold winds of winter, the excess heat and flies of summer. Provides a shelter of trees or sheds near at hand.

9. Uses the clovers, red, sweet and alfalfa with corn silage to form the bulk of the ration.

10. Watches both ends of the machine, knows what goes in and what comes out. Values both and strikes a trial balance frequently. Asks the question, "Who is at fault? Why the loss?" or "Why the profit?" and has horse-sense to admit his fault, if he is at fault—and credit the cow if she is entitled to credit.—L. Stevenson, Dept. of Extension, O. A. College.

What Dairywomen Are Looking For.

Dairy farmers producing milk for the city trade depend largely on the half and half type of farmer-breeder for their supply of cows. These specialists in milk production are the wide-awake business type of men. They know feed, cows and markets. When they go out to buy more cows up and down the country side roads, this is what they look for: Cows with dairy temperament, fertility, well developed milk organs, constitution, vigor, freedom from tuberculosis, mastitis and abortion.

Dairy temperament is indicated by a wedge-shaped conformation, freedom from marked coarseness, alertness, activity and bright eye.

Feed capacity is indicated by a long deep rosy middle, broad muzzle, strong jaw, and well-developed salivary glands.

Well-developed milk organs are indicated by an udder of good size and quality, well attached forward and high up between the thighs, large well-placed teats, and large veins running forward on the abdomen.

Constitution and vigor are indicated by a good heart girth and a good width through the region of the heart, a healthy condition of the skin and hair.

Freedom from disease is best indicated by the application of the tuberculin test and also the contagious abortion agglutination test.—L. Stevenson, Dept. of Extension, O. A. College.

Dairy Notes.

Raw milk as delivered to dairies is not likely to remain sweet longer than 12 to 24 hours, whereas when pasteurized and cooled it will be good and sweet for two or three days. This is a decided advantage for the milk dealer and also for the housewife, who is frequently troubled with sour milk when the produce is handled in a less condition.
