SHEEP IMPROVEMENT

Present Trend of Progress in
Sheep Breeding

Fewer Breeds and Better Breeding —
The Down Breeds Becoming More
Popular — Relative Standing for
Prolificacy.

(Contributed by Ontario Department of
Agriculture, Toronto.)

The world ever clamors for something new. It matters not in what sphere our lot is cast, the call for the production of new material is always upon us and the progress does not progress unless the things many people still have in their minds and that Canada's sheep breeders are still endeavoring to produce. The effort to produce better breeds is a constant one and it is the duty of the breeder to keep abreast of the progress in his field. True, there is room for all breeds, but because we have wide markets for some, it is no reason why those breeds should be neglected. The place of each breed should be determined by its place in the market and the highest profit should be the aim of the breeder. It is a great mistake to ever before in breeding there is no doubt that progress must continue.

Fewer Breeds and Better Breeding

Our experience in breeding birds of very close relationship, such as mother-son, or brother-sister matings, would not warrant us recommending such a procedure. It is true that we have had some successful results, but it is likewise true that most of such matings have been very bad. If one is anxious to breed closely, our experience would suggest a trial of any relationship, so long as the birds are vigorous, but it is not wise to depend entirely upon such a mating. A good in-bred bird will likely be a valuable breeder, but such a bird is difficult to produce.

Winter Egg Production.

Many people appear to believe that the secret of getting eggs, particularly in winter, is in the feeds given and the method of feeding; others believe the whole problem is in the breed or strain, while others think that the housing is the problem to solve. All these are important, but the main reason for poor results is a lack of careful work months before the eggs are wanted. While you are collecting the high-priced winter eggs you should be making careful plans to secure the crop of pullets for next season.

Where eggs in winter are wanted the early hatched pullet is, without doubt, the one to depend upon. Yearlings and those older are very rarely good producers during November and December. They are uncertain even in January and February and really do not begin to lay well until March. Where the egg production falls below fifteen per cent. during the winter months, one is not making much profit. The age at which most pullets begin laying is from six to seven months; some lay at four and one-half to five months, and others not until eight or nine months of age. This means that if a fifty per cent. egg yield is wanted in November the pullets should be hatched during March or April; May hatched pullets will lay a little, but, as a rule, not forty or more per cent. daily. — W. R. Graham, O. A. College Guelph.

Hints on Plow Adjustment.

1. Adjust the springs till the weight of the plow beams and bottoms are practically balanced.
2. Hitch plow at a point on tractor drawbar midway between horizontal centre of tractor and horizontal centre of plow.
3. Adjust vertical position of hitch so as to be substantially level in working position.
4. Set levers for first position and open first furrow.
5. Change levers to working position.
6. When plowing is finished, set the levers in transport position and take plow and tractor to nearest shelter.

The three outstanding features of Holland's dairy industry are cleanliness, efficiency and co-operation. Cleanliness is a national trait, efficiency has been developed, and co-operation has been learned and applied through long years of marketing huge surpluses in the face of the keenest competition.

Inefficient cows are in the majority; they compete with one another, and all are unprofitable some or most of the time. They are a drag on the best cows, but the latter, despite that fact, are money-makers most of the time.

SOME PULLEY POINTS

Selection and Mating Are Both
of Much Importance

Does "Like Beget Like?" — The Question of Selection — Inbreeding and Line Breeding — Winter Egg Production — Points on Plow Adjustment.

(Contributed by Ontario Department of
Agriculture, Toronto.)

There are two main points to be considered in poultry breeding. First the selection of birds that have the characters desired; and secondly, a further selection from these of birds that can produce offspring as good as better than themselves.

Does "Like Beget Like?"

Many are of the opinion that "Like begets like." In general, that is true, but it is true for general and not for particular qualities. It is true that a male White Leghorn mated to a White Leghorn female will breed chickens that are White Leghorns, or that have white plumage, yellow legs, and white earlobes. The offspring of those that are mated together are exactly alike. Large and small Leghorns never go together and lay large eggs.

The Question of Selection

Selection is made on the basis of the like will produce like, but has taught all breeders to uniform superiority through the selection through of poultry. If we select have laid better than twelve consecutive months these to a male of similar do not expect to get but we do expect a better production than a better production than

48th Year.
TOWNSHIP ANNUAL VILLAGE ELECTIONS

On Monday one of the tested Village elections time, took place, with an entire new slate for with the exception of L. Miller, who was a large majority.

The results of the follows, may be said to complete surprise to concerned:

FOR REELECTION
Geo. L. Miller
Gordon Miller
Majority

COUNCIL
He Peacock
George Webb
Joe Owen
Lea Marshall
E. T. Carter
Fred Reicheld
Dr. Leatherdale
John Thomson

TOWNSHIP ELECTORS
In the Township election confined to the deputy B. Shoup headed the large majority. The following:
1 2 3 4 5
*S. 26 43 41 92 34
*W. 36 84 10 13 6

*Shoup, W. B.; *W.

ANNUAL MEETING
The annual meeting of the Jarvis City will be held in the hall on Saturday, Jan. 1:30 p.m., for receipt of statement and election of other business of the city. Members will attend and make an effort.
