Here and There

Canada has officially invited the
British Dominions and colonies and
all foreign powers to attend the
world's poultry congress at Ottawa,
which is to be held from July 27 to
August 4, 1927. Three thousand
delegates are expected to attend.

Canadian construction contracts
for the month of January totalled
\$12,689,000 as compared with \$8,
934,700 in January 1925. This re-
cord for January indicates that win-
ter construction is rapidly increas-
ing in favor.

Mardi Gras celebrations at Que-
bec started off along the lines that
have made the Ancient Capital fa-
mous throughout the continent. This
year the activities were rendered
even more interesting by the fact
that the city is now at the height
of its winter sports celebrations.

The value of the wheat crop of
Saskatchewan was \$264,604,000 in
1925, or substantially more than
half of the total Dominion value. A
total of 13,002,741 acres were seeded
which yielded an average of 18.5
bushels per acre, or a total of
240,581,000 bushels.

One of the most remarkable es-
capes from sudden death was wit-
nessed at Aylmer, Quebec, when a
chauffeur attempted to beat the
train to the Aylmer Road Crossing
and reached the tracks the very
same moment a train was passing.
The taxi driver and his two passen-
gers were thrown from the car and
were unable to speak on account of
the shock and fright. They were
otherwise uninjured.

David E. Brown, 71 years of age,
and J. A. Fullerton, 81 years old,
died at Vancouver, B.C. on the same
day, February 10. They were two
of the best known figures connected
with the early history of Vancouver
and the construction of the Canadian
Pacific Railway. Brown was the
first agent appointed by the com-
pany at Port Moody in 1886 while
Fullerton served thirty years in
Montreal with the old Allen Line
going to Vancouver in 1888.

For the first time in the history
of moving pictures, the Canadian
timber wolf is to be filmed on his
native haunts. Frank Donders, big
game hunter and trapper, and Joseph
J. Sartori, both of Montreal, re-
cently passed through Montreal on
their way to Fabre near the
Kipawa River and Lake Temiscam-
ing where they intend to hunt, trap
and film the timber wolves which
are the scourge of the game of that
country.

A little, gray-haired lady, nearly
seventy years of age and totally
blind, arrived from Swift Current
at Winnipeg. Given into the care
of Stationmaster Ruff of the Cana-
dian Pacific Railway, to transfer to
the outgoing train, she was made
comfortable and assured that she
would have no other changes to
make. Mr. Ruff also ascertained
that she was to be met by her son
at Toronto and assured the feeble
passenger that she would be looked
after and every care given her. "If I
had not had faith in you boys, I
would not have taken the journey,"
came the tribute from her.

AMERICAN FOUL-BROOD

THE ONE SERIOUS DISEASE BEE-
KEEPERS MUST MEET.

Progress Is Being Made, But Further
Co-operation With Government
Men Is Essential.

(Contributed by Ontario Department of
Agriculture, Toronto.)

During the past three years there
has been considerable investigation
work in connection with the treat-
ment of American foulbrood and Dr.
J. C. Hutzelman, of Ohio, introduced
a solution, composed of alcohol-for-
malin, which has been used by many
beekeepers to kill the spores and
germs causing American foul-brood
in the drawn combs used by the bees.

In the late winter and early spring
of 1924, Prof. Jones, of the Bacteri-
ology Department, conducted a num-
ber of laboratory experiments in con-
nection with the treatment of Ameri-
can foulbrood infected combs. Prof.
Jones used a number of well-known
germicides and disinfectants, and his
conclusions were that, so far as Ameri-
can foulbrood was concerned, the
spores were very hard to kill. Prof.
Jones found that a solution of for-
malin and water, as well as alcohol-
formalin, gave positive results in
laboratory tests and this former solu-
tion was much more economical than
alcohol-formalin.

In the summer of 1924 Mr. G. L.
Jarvis, and in 1925 Mr. G. L. Jarvis
and Mr. R. M. Pugh, of the Agricul-
ture Department, carried out a num-
ber of experiments in the apiary, us-
ing infected combs which had been
treated with various strengths of for-
malin and water and alcohol-forma-
lin. Combings packages of bees, from
the south, were placed on these
treated combs and results noted.
This experiment will be conducted
again in 1926.

The results of the apiary experi-
ments, thus far, show that there is
a very serious danger when the bee-
keeper saves infected brood combs
for treatment with either alcohol-
formalin or formalin-water solutions.
In some cases American foulbrood
has reappeared in some of the col-
onies having treated combs.

Destroy All Infected Combs.

The Department has come to the
conclusion that it will pay the bee-
keepers to destroy all brood combs
infected with American foulbrood for
these reasons: (1) If the beekeeper
keeps infected combs for later treat-
ment, his own and all healthy col-
onies in a radius of two or three
miles are in danger of becoming in-
fected; (2) the cost of the equipment
and solution is prohibitive unless a
thousand or more combs are to be
treated; (3) we are not yet satisfied
that we can treat infected brood
combs with 100 per cent. effective-
ness. In view of these facts the De-
partment, at present, is urging bee-
keepers to destroy, by burning, all
infected brood combs.

The treatment of super combs,
used over an infected colony, is
somewhat different. In these combs
there are no scales of American foul-
brood present and our experiments
show that these combs can be effec-
tively treated with a 20 per cent.
formalin-water treatment.

Headnote—Not Control.
With the positive knowledge that
beekeepers can effectively treat all
super combs, which have been used
over infected colonies, the Depart-
ment is changing its method of as-
sessment work, and last year an ef-
fort was made to eradicate, not con-
trol, American foulbrood in the
counties of Hastings, Peterborough,
Northumberland and Prince Edward.
The results show that 5,093 colonies
were examined, 617 were found in-
fected with American foulbrood and
the contents of these infected col-
onies were destroyed by burning. This
burning of over 66 colonies in these
counties might appear to be a serious
loss, but it must be remembered that
a colony with American foulbrood
soon ceases to produce a surplus of
honey and, while it remains, it is a
menace to all other healthy colonies
in the vicinity. Once American foul-
brood is cleaned out, then the bee-
keeper can go ahead and keep bees
more profitably and more economi-
cally.

The Department hopes to bring
other counties into this clean-up cam-
paign in 1926 and gradually widen
the campaign until the whole prov-
ince is included. To make the work
as effective as possible, the Foul-
brood Act has a quarantine measure
which will prohibit a beekeeper mov-
ing any but combless bees or inspec-
ted healthy colonies into those coun-
ties where a clean-up of American
foulbrood has taken place. Agricul-
ture Department, O. A. College.

Attractiveness of the Country Home.
A boy whose early years are spent
in the country will fondly remember
his youthful experiences and animal
companions. Country life to the
young lad is a life rich with happy
associations, and so different to the
youth of the town boy who has been
deprived of the green fields, the forest
and the farmstead associations.

The Ontario farm boy is alert,
eager, questioning and he will face
the direction of most vital interest
as it appears to him—the city, if it
offers the greater thrill and oppor-
tunity, or the green fields and coun-
tryside if they attract with sufficient
force to satisfy the pulse of youth.
The appeal to go or the impulse to
remain must stir his blood and pro-
mise a victory. Attractive home sur-
roundings will hold the youth as a
magnet and reduce the pull of the
far away and often imagined oppor-
tunities of the city.

Make the surroundings of the
country home attractive, with human
kindness and the beauty of natural
things, that environment may exert
its strong influence in retaining the
youth on the land.—L. Stevenson,
Director of Extension, O. A. College.

THE PLACE OF QUALITY

To Our Farming Friends

There'll be a hundred and
one things that you'll hardly
be able to do without just as
soon as summer work be-
gins. Now, don't think that
we are trying to make you
feel bad by pointing out
your coming expenses. That
is not our intention at all.
We merely wanted to men-
tion that about ninety-five
of those one hundred and
one things can be got here
at just a little bit better
prices than you could buy
them somewhere else for.

This is the right place to
come for
