Here and There

Lord and Lady Allenby have left Canada, on board the Canadian Pacific liner "Montrose," for home. The distinguished general was received enthusiastically in every city throughout his tour of the Dominion. He delivered addresses showing the importance of the capture of Palestine to the Allies in the Great War.

V. C. Vickers, managing director of Messrs. Vickers Ltd., London, England, who arrived in Canada recently on board the Canadian Pacific liner "Empress of Canada," reported that the shipbuilding industry both in China and Japan was in a healthier condition than for many years past, with shipbuilders favoring the motor ship.

Travelling right across the Dominion, exclusively on Canadian Pacific lines and in the palatial special car "Loch Lomond," Her Grace the Duchess of Atholl, whose family seat is at Banff, Scotland, will make acquaintance for the first time in her life with the world famous resort in the Canadian Rockies, which took its name from her Scottish home.

A. Hatton, general superintendent of transportation for the Canadian Pacific Railway, has announced the intention of the company to raise the embargo against the loading of grain to Fort William and Port Arthur and the milling companies and elevators at Winnipeg. This is due to the anticipation of the opening of navigation on the Great Lakes about April 20.

The total yield of wheat in Canada for 1925, as finally estimated by the Dominion Bureau of Statistics, is 416,849,700 bushels, the second largest on record, having been exceeded only by the 1923 crop. The value of this crop is estimated at \$485,116,200, or over \$63 per capita of Canadian population. The average wheat yield was 19.2 bushels per acre.

A general survey of reports by the Canadian Pacific Railway, on agricultural conditions throughout the West shows that farmers are pleased with present conditions and speak optimistically on the season's outlook. Sufficient moisture for spring crops seems to be assured. Livestock wintered well. Adequate supplies of seed are available and no shortage of labor is expected.

A special C. P. R. train carrying 438 settlers from the S.S. "Montcalm" reached Winnipeg recently. Among the passengers were thirty-one British families who came under the 3,000 family settlement scheme. There was one party of 10 German-speaking Catholics, and the Salvation Army, under Captain Sharp, brought out a party of twenty young lads going to British Columbia.

It has been announced by the passenger department of the C. P. R. at Winnipeg that negotiations have been complete with the Central Canada Air Lines Limited, for an air service between Kenora and the new gold fields at Long Lake and Red Lake. A regular daily service is to be inaugurated about May 24 in connection with the C.P.R. from Kenora and during summer service will be run between Kenora and Duluth.

ON GROWING POTATOES

IMPORTANT CROP IN ONTARIO AS IN ALL THE WORLD.

Although Universally Grown Not Every One Uses the Best Methods of Cultivation.

(Contributed by Ontario Department of Agriculture, Toronto.)

The potato is one of the four principal food crops of the civilized world. More land is devoted to the potato in countries where it is grown, than to any other vegetable crop used for human food.

Important in Ontario.

In Ontario the potato crop is one of great importance. There are certain well defined areas where it is grown almost exclusively as either an early crop or as a late crop. Other districts grow a proportion of both crops. The real early districts are located in Peel, Wentworth, Lincoln, Norfolk, Elgin, Kent, Essex and Lambton counties. The late crops and seed crops are grown pretty generally throughout the other counties and districts of the Province.

Soil.

The market gardener and truck grower aim to grow an early crop and desire a well-drained soil of a sandy or sandy loam nature. Such a soil must be supplied with plant foods and be in such a mechanical condition as to retain the necessary moisture. For the late or main crop any good loam, well drained, friable and rich will give a good crop. Thorough soil preparation is essential in all cases.

Manure, Fertilizers and Their Place in Crop Rotation.

Crop rotations play an important part in fitting soil for potatoes and it is generally considered that potatoes following clover sod, preferably manured and ploughed under during the previous autumn for the early crop, is a good practice. The soil should be kept rich and open, avoid the use of fresh manure, as such is liable to create conditions favorable to potato scab. Commercial fertilizers can be used to supplement manures. Under the conditions generally experienced in this province phosphorous and potash are the elements most needed. Clover and manure are used generally not considered necessary to use commercial nitrogen excepting in particular cases with the early crop. On light soils, where manure and clover are used an 0—(10 to 14)—4 applied at the rate of from 800 to 1,200 pounds per acre should give good results. On heavier soils, under the same treatment, the potash can be reduced. Where chemical fertilizers alone are used as the source of plant food, a 2 to 4—(10-12)—4 to 6 mixture applied up to one ton per acre may be used.

Planting.

Sets containing two eyes and of at least two ounces in weight should be used. These are planted from nine to fifteen inches apart in rows from thirty to thirty-six inches apart. The late crop should be planted thirty-six inches between the rows.

Cultivation.

Frequent and thorough cultivation early in the season meets with marked response. Deep cultivation early in the season gradually becoming shallower as the root system develops should be the practice. Some growers make it a rule to cultivate during the early season after every rain. While others will start the plough over the potato field as soon as planting is completed and continue this method of shallow tillage until the plants are two or three inches high. The practice of hilling is only recommended when necessary to smother weeds or prevent sunburn.

Harvesting.

The early crop is often harvested before it is fully mature, in fact the size of the potatoes and the market demand influence the date of the harvest. With the late crop, however, where the season allows for maturity, harvesting is not advised until fully ripened. For small lots the digging fork is commonly used, while for greater areas the plough or potato digger can be used to advantage. Care must be exercised during harvest to prevent damage to the tubers that may reduce the market value.

Storing.

Potatoes may be successfully stored in cellars or pits. When cellars are used the question of air circulation is very important. The storage temperature range should be between 33° F. and the atmosphere should be just medium moist. Bins should have a false, or slatted bottom, and if the quantities of potatoes are large, air shafts should connect the bins beneath the potatoes with the ventilators. Pits should be made in a well-drained location, twelve to sixteen inches deep and four or five feet wide. Ventilators should be put in, and covering provided as the weather grows colder.—Dept. of Horticulture, O. A. College.

How to Kill "Mustard."

A system that will do away with mustard in ten years is a three-year rotation of Fall rye, seeded down and followed by Red Clover, which is ploughed and the third year planted with beans in rows 30 inches apart and cultivated. Fields very bad with mustard are reduced so that it can be hand pulled. Buckwheat will not kill out mustard, but it is agree at help as it grows very thickly and shades many of the weak sickly plants so that they do not amount to very much.

Canadian Apple Exceels.

In the Imperial apple show in England, during years 1922 to 1925, Canadian apples won 64 first places, 73 seconds, 24 thirds and 22 special prizes. In 1925 the British Columbia Jonathan was judged to be the best dessert apple in the British Empire, and the premier cooking apple was the Ontario Rhode Island Greening. In 1924 and 1924 Canadian-grown McIntosh apple was judged to be the best dessert apple in the Empire.

THE PLACE OF QUALITY

SAFE SHOPPING

WE have never yet asked our patrons to consider uncertainties. It's contrary to the policy of this store — and this fact has built us an asset of confidence with the public that is beyond our ability to estimate.

If we place a line of goods before you either in our advertising or on our counters — it is understood that it represents the high water mark of excellence, whether anything is said about the quality or not.

Here is another thought that we would like you to hang up on a peg in your memory — "If you buy carefully you will likely buy wisely, because you'll likely buy here."

We encourage carefulness in our customers, and we regard the time which we take to explain the merits of our merchandise as time well spent.

And we request that you, dear reader, shall regard it as your absolute right to understand fully all the points of the goods that are shown you.
