FARM YOUTH TO BE HONORED

(Continued from Page 1)

lowing day on the "27th Anniversary International." the future farmers will again be the center of attention as they lead out their highly-fitted baby beeves, lambs and pigs to compete in the classes of the Junior Feeding Contest. These animals were the outstanding individuals of the county and state fairs this fall and have been carefully groomed for the supreme struggle at Chicago. A special auction will be provided for their sale on Friday, December 3rd. While the junior live stock titles are being decided in the arena, farm boys and girls will also be exhibiting the samples of corn in the junior classes of the International Grain and Hay Show for the honor of being crowned the Corn Prince or Princess of 1926.

The Fifth National Boys' and Girls' Club Congress, fostered by the National Committee on Boys' and Girls' Club Work in cooperation with the U. S. Department of Agriculture and the State Agriculture and the State Agricultural Colleges, will be held in connection with the International Live Stock Exposition and over 1200 state and county champion club members and their leaders will attend from 41 states, Canada and Hawaii. An entire building on the Exposition grounds has been dedicated to club work and this will be filled to overflowing with junior activities. National contests will be held between state champion teams will give continuous demonstrations of the various club projects. The girls will take part in clothing, canned goods and bread judging contests and will appear in a style show wearing outfits made by themselves. The National Health Contest and the Moses Leadership winners will be selected and introduced during the Congress. Monday night an inspiring tribute to the farm youth of America will be staged in the Amphitheatre, featuring a parade of juniors and club products.

Here and There

Portage La Prairie, Manitoba.—Ten carloads of flour have been shipped to Salonika, Greece. The flour is made from Manitoba Number 1 Hard wheat and labeled as such. This large order is thought by the milling interests to represent the opening up of a new, valuable trade channel.

Saskatoon. — The colonization boards of the province, operated under the C.P.R. Department of Colonisation, are doing a splendid work in colonizing the province along right lines, according to Mayor Potter, of Saskatoon, and other speakers; at the second annual meeting of representatives of these boards.

While the gypsy has been a familiar figure in fiction for at least a century, the novelist has usually taken for his characters the wild Romany types. But there is a modern type who has adopted himself to city life. It is this type that John Murray Gibbon, Dean of Publicity of the C.P.R., has chosen for the leading character in his new novel, "Eyes of a Gypsy."

Toronto. — The Ontario Government is spending $1,000,000 during the present fiscal year to make hydro-electric power available to the farmers of the province. This follows the plan begun by the Drury Government, of paying one-half cost of primary line construction, and later extended by the Ferguson Government to secondary line work as well.

One hundred young men from the British Isles will take up their studies of Canadian farming at the Agricultural College at Olds, Alberta, soon. Seven of these prospective Canadian farmers arrived in Canada on the Canadian Pacific liner "Montcalm" recently, being brought out under the Hoadley Immigration scheme, which is being carried out in conjunction with the Empire Settlement Board.

Toronto. — Ontario cattle scored signally at the National Dairy Exposition in Detroit last week with a prize winner in each of the first four Holstein breeds. This is a better record than that of any other part of the continent. The prize winners were: Leroy Siddall and J. F. Gibbons, of Denfield, T. O. Dolson, of Brampton, and Haley and Lee, of Springford. A number of lesser prizes also went to Canadian breeders.

"Anyone who has other than an unbounded faith in the future of Canada, must be either without eyes or mind," declared Sir George McLaren Brown, European general manager of the Canadian Pacific Railway, who returned to the Company's headquarters in Montreal recently after an extended tour of the Western Provinces. Sir George was greatly impressed with the growth of the city of Vancouver, where he visited after an absence of 15 years.

INFECTIOUS ABORTION

A Serious Trouble Threatening Cattle Herds

Sellers Should Be Honest With Buyers—Outside Cows Purchased Need Careful Examination—How to Deal With Infected Animals — Chicken Lice and Mites.

(Contributed by Ontario Department of Agriculture, Toronto.)

To protect a clean herd from becoming infected precautions must be taken to prevent infected cows from mingling with healthy ones. Suspected animals should be kept isolated until a test of their blood has been made. If the test results indicate a positive reaction, the animal should not be admitted into the clean herd. As already stated, the disease is generally introduced into a clean herd through obtaining adult breeding cattle from an affected herd. Before purchasing breeding cattle careful enquiry should be made to ascertain if the herd from which they are being obtained is affected. One can sometimes gain a fair idea of this by checking up the number of calves and yearlings with the number of females of breeding age.

Sellers Should Be Frank With Buyers.

As the bases of an honorable transaction between breeders, the buyer has a moral right to receive from the seller a frank answer as to the existence or otherwise of contagious abortion in his herd. The buyer may still further protect himself by having newly obtained pregnant females kept isolated pending a test of their blood or until they calve. By sending blood samples to a suitable laboratory for examination by the agglutination test, a person is acting discreetly. This can conveniently be done and a report received back within a week. The same thing should be done in the case of a bull. In purchasing cattle at public auctions from unknown herds the safest plan is to select only young cattle at weaning age, or not over one year old, and which have not been bred. In all cases where the blood of an animal reacts to the test it indicates that it is infected, and is not a safe animal to be added to a clean herd, but should be excluded, and, if the agreement of purchase will permit, should be returned to the seller or the original owner.

Outside Cows Should Be Carefully Examined.

In event of outside cows being permitted to come to be bred to the bull of a clean herd, they should only be bred providing they are free from vaginal discharge, and service should take place in a small yard or pen kept for that purpose. Needless to say outside cows from doubtful herds should not be allowed to mingle with those of a clean herd, nor occupy the pastures on the premises in order to prevent contamination. Precautions should also be taken in the case of cows from clean herds being sent to another herd to be bred. Likewise precaution must be taken in the case of clean-breeding females being taken to live stock fairs and exhibitions. The precautionary measures which have been described are quite simple and applicable to any herd, and if consistently carried out may prevent infection abortion from entering a clean herd. Should perchance a cow abort in a supposedly clean herd, it should be regarded irrespective of excusable circumstances, as being probably the contagious form rather than purely accidental and precautions taken accordingly.

How to Deal With Individual Cows.

In the event, therefore, of any animal aborting in the stable, or at pasture, it should at once be removed from the herd and kept isolated for at least three weeks, or until it has properly cleaned and all discharges have ceased. At the end of ten days from the time of aborting an examination of her blood should be made. Immediately after the abortion has taken place the aborted fetus and afterbirth should be safely disposed of by burying deeply in the ground. All of the contaminated bedding and litter should be removed from the stable and burned. The stable walls and stalls up to a height of about six feet, and the floors and gutters should be thoroughly cleaned and washed with a solution of ordinary lye and hot water, and then disinfected with lime wash and cresol or carbolic acid, in the proportion of one pound of cresol or crude carbolic acid to five gallons of whitewash.—C. D. McGilvray, D. V. Sc., Ontario Veterinary College, Guelph.

Chicken Lice and Mites.

The presence of lice and mites indicates indifference, or too much don't care. Lice and mites lower the vitality of the birds, making them more susceptible to colds, roup and other diseases. Mites are killed by spraying the house inside, paying particular attention to the roosts and nesting boxes, saturating well with an oily fluid. A mixture of kerosene and spent oil from the auto crank case does very well and is not expensive. For lice use sodium flouride — one ounce to a gallon of warm water. Dip the chickens, saturating feathers and skin. Do this on a warm bright day. During cold weather use the sodium flouride as a dusting powder, placing small quantities at the points most frequented.—L. Stevenson, Director of Extension, Ontario Agricultural College.

Four fundamental factors to success

Found fundamental factors to success in dairying are:

Cows of dairy type and breeding.

Feed for suitable dairy rations.

Care to provide all necessary conditions for good production.

Men who are dairy minded and persevering.
