CORRESPONDENTS

(Continued from Page 1)
ton, spent the holiday at Mr. Wm. Hattice's.

Those who spent the holiday under the parental roof here were: Mrs. M. H. Walker from Stoney, Harold Pond from Toronto, Victor Pond from Simcoe, Eva Doughty from Buffalo.

Harold Hoeber, of Hamilton, spent Sunday at Mr. John Walker's.

Mr. and Mrs. Wm. Bush, of Bradford, and daughter, Mrs. A. Wintermute, of Ligonville, and Mr. and Mrs. N. Armour and children, of Toronto, spent the week-end at Mr. J. W. Bush's.

LOST—A young man, somewhere between Sandusky and Chippewa, on Monday evening; but we expect he has been found by this time.

Mr. J. W. Bush is spending this week at Toronto and intends taking in the Royal Fair.

Here and There

Leithbridge—Ready-made, irrigated district has surely broken all wheat records with a yield of 72 bushels of Turkey Red winter wheat to the acre on a 37 acre field. This unusual feat was achieved on the farm of Armour and Brinkley.

Honey from Ontario, in competition with exhibits from all parts of the world, was awarded first and second prizes at the British Dairy Show held recently in London, England, according to a cable received by the Ontario Honey Producers' Cooperative Ltd.

Vancouver—A giant merger of timber interests in British Columbia, Washington and Oregon, involving \$400,000,000 of capital, is likely to eventuate from plans now under way, according to "The Daily Province." Several of the British Columbia mills—a quarter or a third of the whole—are said to be favorably inclined to the amalgamation.

Montreal—Despite the lateness of the season new immigration to Canada continues at quite an active rate. Week-end arrivals of the Canadian Pacific Steamships "Montclair," "Montcalm" and "Minimac" discharged approximately 1,250 third class passengers to be added to Canada's population. Included in the new arrivals was the first contingent of British youth to come out to Alberta under the extension of the Hoadley scheme.

Manitoba's tourist traffic for the 1926 season left over \$7,000,000 in the province, according to the Winnipeg Tourist and Convention Bureau. From the United States a total of 106,710 visitors came into the province of which number 75,012 stayed for a day while 30,988 remained for a longer time. The average stay of the latter was 3 1/2 days. The increase of cars entering the province over those of the previous year was approximately 45 per cent.

In order that a more intimate knowledge of the Canadian Pacific Railway shipping terminals in the vicinity of Montreal might be gained, over 150 traffic representatives of the various industrial concerns in the district were the guests of the C.P.R. in a recent tour of the various terminals. West Montreal, Adirondack Junction, Mile End, East End cattle markets, Angus Shops, Hochelaga and Place Viger were among the terminals inspected by the manufacturers.

The S.S. "Emperor of Port McNicoll" now undergoing overhauling at the Vicker's Yards in Montreal, will be re-named the "Nootka" and placed in the British Columbia Coastal Service, according to C. D. Nemutso, assistant manager of the Service. The vessel will sail for St. John's, Newfoundland, and thence to Sydney, C.B., where she will load with 2,500 tons of steel and proceed to Vancouver via the Panama Canal. This will be the first trip of the "Nootka" under Canadian Pacific ownership.

An optimistic forecast for the future of Poland was made recently by Gerard Hyna, representative of the Canadian Pacific Railway Company at Lemberg, Poland, who was interviewed in Montreal recently after completing an extensive tour of the Dominion and part of the western United States. Mr. Hyna stated that he was impressed with the evident prosperity of the Polish immigrant settlers he had visited in Edmonton. The acute problem of Poland today was over-population, informed the European representative.

It pays to read the Advertiser.

WINTER WHEAT FACTS

SUPERPHOSPHATE IS AN ESSENTIAL FOR BEST RESULTS.

The Cost is More Than Repaid—The Hessian Fly in Ontario—O. A. C. No. 104 Winter Wheat—Growing Hubam Sweet Clover With Oats.

(Contributed by Ontario Department of Agriculture, Toronto.)

The department of chemistry, Ontario Agricultural College, during the past year carried on experiments in eight counties to show the effect of lime and phosphates on fall wheat seeded with clover.

Phosphates Essential for Fall Wheat.

From observation during the growing season and from yields the following points are noted:

(1) Phosphates gave an increased yield in every case, averaging fifty per cent.

(2) The catch of clover was wonderfully improved by the phosphates.

(3) Size and quality of grain was increased, as well as yield, by phosphates.

(4) The cost of 400 pounds of solid phosphate per acre was more than covered, leaving a substantial profit in every case.

(5) It is estimated that approximately half of the phosphate remains in the soil for succeeding crops.

(6) Liming makes little difference to the growth and yield of fall wheat. Its effect will undoubtedly be seen on the stand of clover the following year.

Farmers are well advised to apply solid phosphate (superphosphate) to their fall wheat at from two hundred to four hundred pounds per acre.

The Hessian Fly in Ontario.

In each of the past four years the Hessian fly has been working more or less in the winter wheat crops of Ontario. In the Field Husbandry Department at the Ontario Agricultural College the ravages of this pest have been studied in each of forty varieties of winter wheat. The estimated average percentage of plants containing Hessian fly was 3 in 1920, 26 in 1921, 7 in 1922, and 15 in 1923. The susceptibility of the different varieties varies considerably. The Imperial Amber, O.A.C. No. 104, Dawson's Golden Chaff, and Red Rock were below the average, and the Early Red Clawson, Kanred, Gold Coin or No. 6, and Early Genesee Giant were above the average for infested plants in the last four years, the percentage being 4 for the first and 22 for the last of the above named varieties.

O. A. C. No. 104 Winter Wheat.

The O. A. C. No. 104 variety of winter wheat originated at the Agricultural College by crossing the Dawson's Golden Chaff and the Bulgarian varieties, and has made the highest record of five leading varieties tested on one hundred and twenty-eight farms throughout Ontario. Not only is it a high yielder, but from equal quantities of seed it has produced more bread than the Dawson's Golden Chaff. It is interesting to know also that it has been more hardy even than the Dawson's Golden Chaff, and almost as stiff as the straw, and seems to be less susceptible to smut.

Growing Hubam Sweet Clover With Oats.

In the field crop experiments at the Ontario Agricultural College at Guelph in the past three years, Biennial White Flowering Sweet Clover has given a greater yield per acre, although later, than the White Flowering annual or Hubam in the first year's growth when both kinds were sown alone under similar conditions and at the same date in the spring of the year. When Sweet Clover has been grown with Oats, the Biennial variety has given good returns for autumn pasture. The Annual Sweet Clover when sown with Oats, either at the time of seeding or when the Oats were 3 or 4 inches high, has been a nuisance in the grain crop. A mixture of O. A. C. No. 72 Oats and Annual White Flowering Sweet Clover, however, is being cut this year as a hay crop, and in the future this combination will be studied more particularly from the standpoint of green fodder and of hay production. So says Dr. C. A. Zavitz, Department of Extension, O. A. C., Guelph.

Heavy Pruning Waste of Energy.

Very little difference was noted in the behavior of heavily-pruned plum trees and trees receiving much less pruning in tests conducted over a number of years, with several standard varieties of plums on the grounds of the New York Agricultural Experiment Station at Geneva. In the opinion of the station horticulturists, most varieties of plums require but little pruning following the proper shaping of the trees after they are planted. Since little pruning gives just as good, if not better trees, it is regarded as a waste of time and effort to pay too much attention to the pruning of plum trees. The chief recommendation is to thin out thick growths where necessary and to remove broken or injured branches.

When the orchard has not been pruned in the winter, a time should be taken to do this work in the summer, but not later than the middle of July. It is not good to prune as heavily in the summer as in the dormant season. Summer pruning is said to aid in fruit bud formation, but this has been disputed more or less by experimental stations.

Approximately 20 per cent. of each potato pared by ordinary household methods is lost in the process. The loss includes much and sometimes all of the portion of the tuber containing important soluble salts. Potatoes that are boiled and baked in their skins lose practically none of their food value.
