### Here and There

The financial statement of the Canadian Pacific Railway issued at Montreal for the seven months of 1926 ending July 31st, shows the large increase in the net profits of \$6,691,301.52 over the net profits for the first seven months of 1925. The gross earnings were \$101,886,207.11, as compared with \$90,342,807.75 for the first seven months of 1925.

Unofficial estimates prepared by the authorities of the Department of Commerce, Washington, estimated that Americans visiting Canada this year would spend approximately \$190,000,000. This estimate was estimated to be very conservative and that it was more than likely that the amount would exceed the \$200,000,000 mark.

Announcement was made recently over the signature of E. N. Todd, freight traffic manager, Canadian Pacific Railway, of the appointment of D. A. Wanklyn as Industrial Commissioner of the Railway, with offices in Montreal. Mr. Wanklyn replaces Graham W. Curtis, who has resigned, to fill the position of general manager for Montreal Rail and Water Terminals, Limited.

Otto H. Kahn, chairman of the board of directors of the Metropolitan Opera Company, accompanied by a party of internationally known financiers of New York, visited the National Exhibition at Toronto recently. Mr. Kahn, who is perhaps the leading art and music patron of the United States, addressed a luncheon of the directors of the Exhibition on September 2nd, the day of the Exhibition, which was set aside as "Music Day."

It is understood that purchases in Canada of 5,000 railway cars may result from the visit of the engineering expert, Mr. Vandergulch, and the Transport Commissariat's representative, Mr. Basoraky, who have been delegated by the Soviet Republic to investigate the possibility of securing this number in Canada. They have also been instructed to make a study of the organization of the Canadian railway shops and the repair methods in general.

Three wolf cubs were caught recently near Lake Douville in Northern Ontario by Arthur Beauvais, well-known driver of the Chateau Frontenac dog team at Quebec, and will be trained by Beauvais for the harness. He is confident that by mingling the wolves with huskie puppies for several months they will lose some of their wolfish nature and make an attractive addition to the Chateau team. Beauvais states that, while wolves have endurance, they have not the "heart" of a huskie dog.

Two world's swimming records were established at the Crystal Gardens swimming pool at Victoria recently, when Ethel McGarry, of New York, swam 880 yards in 12 minutes and 41 seconds, or nine seconds better than the previous woman's record for this event; and when Agnes Gerahy, also of New York, clipped five and two-fifths seconds off the previous record for 200 yards, by completing the distance in three minutes and 12 and three-fifths seconds.

Celebrating the change in name of the historic Dominion Express Company to that of the Canadian Pacific Express Company, a street parade in Montreal was held September first, the day of the change in name, consisting of every description of Express vehicle, new and old. Sam Nightingale, a driver of 30 years' service, headed the parade seated in a wagon of 1890 vintage, and hauled by "Babe," a horse that has been in constant service with the Company for 19 years. Similar parades were held at Toronto, Winnipeg and Vancouver.

### TIME WILL AID CLOVER

It Enables the Plant to Cope With the Winter

Acid Phosphate Good for Clover and Alfalfa—A Great Root Farmer—Nitrate of Soda Helps in Cold Springs—Foultry Pointers.

(Contributed by Ontario Department of Agriculture, Toronto.)

Did your clover kill out in the spring? If it did, you had better write the Department of Chemistry, Ontario Agricultural College, Guelph, for directions for taking a sample of your soil to discover the reason.

Reports from some districts this year show a good deal of winter wheat and clover killed out, states the Department of Chemistry, O.A.C. This is highly undesirable, and can be prevented by the use of lime and acid phosphate applied with the crop on which the clover is seeded. In some cases lime is not necessary, for the soil is not acid; but where acidity occurs lime is very essential. Phosphorus is a great root farmer, and it is the strong deep-rooted clover and it is the strong deep-rooted clover and wheat plant that withstands the alternate freezing and thawing of spring weather.

In answer to a circular sent out last spring to the twenty-five co-operative experimental handling of lime phosphate experiments, the majority report that the clover on the half acre which received crushed limestone and acid phosphate in the fall of 1922 is in perfect shape, while in many cases the untreated section did not winter nearly as well and in one or two cases will have to be ploughed up.

If seeding is done with spring grain it is good business to use acid phosphate at the rate of at least 300 pounds per acre, and preferably 400. If the soil is acid, lime is also necessary to give a strongly-rooted clover and alfalfa which will carry it over the first winter, the most critical period of the life of the plant.

Wastes of Soda Helps in Cold Springs.

In such a season as the spring of last year, cold and wet, the greatest need of the plant is for nitrates, says the Department of Chemistry, Ontario Agricultural College, Guelph. The ground will be so cold and wet that it takes a long time to warm up, and as a result bacterial activity is at a low ebb. As a result no nitrates are formed in the soil, and plants cannot make vegetative growth.

To correct this and enable the plant to get away to a good start, apply nitrate of soda one hundred pounds to one hundred and fifty pounds per acre at once. If bought in lots of several hundred pounds it can be obtained at a reasonable price, and its benefit is almost certain. Do not, however, apply it if heavy rain threatens, as it is soluble and will be lost by washing.

Another benefit which will be derived is that the nitrate of soda dissolves in the soil water and soaks down into the soil. The roots go after it, and hence the result is a deeper rooted plant more able to withstand the period of drouth which so often follows a wet seed time.

### Foultry Pointers.

An ointment of lard and kerosene is a good one for scaly legs.

Nothing will more quickly make scrubs of your stock than scrub treatment.

The best tonics you can give your stock are fresh air, exercise and a variety of foods.

It is usually the best policy to keep the hens shut up on cold, rainy days. They are better inside than out during such weather.

"Bad luck" is nothing more than a penalty for mismanagement. Before you begin to complain, it would be better to investigate.

Fowls are naturally of a hardy nature. They can be kept so by good care and breeding only from the strongest and most vigorous specimens each year.

The poultry building should not be so wide that the rays of the sun can not reach the back of the interior of the house. Otherwise it will be damp. Fourteen feet is a convenient width.

Chicken mites do not feed to any great extent upon other hosts when chickens are at hand. They are carried about chiefly by the interchange of poultry and in crates and boxes in which fowls are shipped.

Poultry raising is similar to farming in that it is not so much the number of acres owned, but the number properly handled that gives the profits. Small, well cared for flocks always bring the best returns.

The hen's greatest profit-producing period is the first and second years, and unless a hen is an especially good breeder she should be disposed of at the end of her second laying season and before starting to molt.

Boys and girls should be encouraged to start in the poultry business. It requires little money to invest, and the current expenditure may be reduced in part by utilizing farm and home wastes. If the project begins with a laying flock the return begins early, especially by supplementing the food supply of the home.

### Egg Production at O. A. C.

The average egg production of the one thousand pullets that were trapped for the year was 168 eggs each. We are trying to improve the strain in size of body, size of eggs and color, rather than increasing the number of eggs. Five pens of ten pullets each were placed in laying competitions. The fifty birds averaged slightly above 190 eggs each. The high bird of those in the contests was 263 eggs, and the high bird of those on the plant was 296 eggs.—Prof. W. R. Graham, O. A. C., Guelph.
