TORONTO

of our native nut trees and the introduction of suitable varieties from foreign lands have not occupied a promient place in horticultural activities in North America until just recently, scept in the Southern and Western United States, where a great deal of interest has been shown during the last twenty years in this place of hortieniture In the northern and eastern States

and in Canada there is a growing interest in this useful but much neglected branch of horticulture. An example of this commendable movement is seen in the organization and activities of the Northern Nut Growera Association. This organization was formed in 1909, and is composed of men and women from almost every station in life who are interested in the cuiture of nut trees and the extension of the use of nuts as articles of numan food. At the suggestion of members of this association, the State of Michigan has undertaken an extensive program of nut tree planting along the state highways. and in other northern states good work has been done to encourage peopie to plant more and better nut

in Ontario comparatively little has been tried to improve and plant our valuable nut trees, and unless something is done to interest the public in this movement we shall lose a golden opportunity to save for ourseives and posterity the remant of the fine nut trees which formerly grew so abundantly in some parts of \$101246.67 this Province.

Why Nut Trees Should be Planted. Most people who are interested in

the welfare of the country realize that trees generally should be planted in much greater numbers, and some believe that it would be desirable to plant trees that serve a threefold purpose of food, shelter and Nut trees yield a valuable food,

provide shelter and beautify the landscape, and thus combine beauty with utility. Large quantities of nuts are imported every year from foreign countries, for which a great deal of money has to be sent out of the country. It is believed that a portion of this demand for nuts could be met \$1409.79 by growing a greater number of the

Where the soil and the site are suitable, nut trees should form a part of the scheme of beautifying our highways and streets.

(2) Trees for the Home Grounds: The grounds surrounding many of our homes, both rural and urban. would be more beautiful and productive if planted with some of the best types of native and exotic nut trees.

(3) Steep Hillsides or Other Places: Areas not easily or profitably cultivated could be very well devoted to nut trees provided the soil was (4) As Park Trees: City and rural

parks should certainly have a collection of native nut trees and some of the hardiest and best exotic species.

(5) As a Commercial Venture: In the warmest part of the Province of Ontario it might pay to establish, on a small scale, commercial plantations of the best varieties of black wainut. Japanese walnuts, hickories, blightresistant chestnuts, and filberts. Kind of Nut Trees to Plant.

Nut trees, like fruit trees, are difficult to grow true to type from seed, and hence have to be propagated by budding or grafting. While it is quite true that one may get a very good tree by planting nuts from desirable tree, it is also true that a considerable proportion of the trees so produced will not be any better or as good as their parent. Because of this uncertainty it is much better to plant budded or grafted trees of superior named varieties.

Inasmuch as nut growing is a comparatively recent development, our Ontario nurserymen have not devoted much attention to the propagation of named varieties of nut trees. There is some interest being shown at present, however, and it is hoped that before long there will be a fair supply of the best varieties of native and foreign nut trees available. In the meantime those who desire to secure named varieties of nut trees will have to place their orders with nut nurserymen in the United States. Nut Trees May be Top-grafted.

Should the prospective nut culturist not be able to obtain at a moderate figure budded or grafted stock of improved varieties of nuts then, of course, the only thing to do is to grow seedling trees. As previously stated, some of these may produce very good nuts. It superior trees are found in any lot grown from seed, or if an exceptional fine native tree is known to exist, such trees are useful as a source of scions for improving trees that are not so desirable. It is a fact, though not generally known, that nut trees may be top-grafted like fruit trees. This task is not as easy to accomplish as is the case in fruit trees, but if proper methods are followed, very good results may be obtained.—Jas. A. Neilson, Hort. Exp. Station, Vineland
