

A FAMILY MEDICINE

A Well-knit Lady Tells of the Value of Dr. Williams' Pink Pills in Her Home.

"I have many reasons for praising Dr. Williams' Pink Pills," says Mrs. George L. Swick, R.R. No. 2, Welland, Ont. "My first experience with this medicine was in my girlhood, when, following an attack of scarlet fever, I was left in a badly run down condition, and the pills restored me to good health. Later in my married life I had a severe attack of rheumatism. The pain in my right arm and shoulder was so bad that I could not dress myself without help. Again I resorted to Dr. Williams' Pink Pills, and again they proved a blessing to me, as soon as the rheumatic pains and stiffness disappeared and there has been no return of the trouble. Dr. Williams' Pink Pills have also been of great benefit to my children. One of my boys was threatened with St. Vitus dance. His limbs and face would twitch and jerk. I gave him the pills, and again they did not fail me under the treatment the trouble ceased. I have also given the pills to my little girl, who was anemic, and in this case also with the greatest benefit. Naturally when I hear anyone complaining of not feeling well I recommend Dr. Williams' Pink Pills as I know of no other medicine to equal them in building up the blood and restoring health."

The Choice of An Airport
New York World: An airport must not be encompassed by wires, chimneys and tall buildings; it must be outside crowded residential areas; it must be free from smoke, and, at least, pending the invention of the helicopter, it must be roomy. Its selection should not be left to accident.

Consider the wasp as an example of industry rewarded. He rarely gets a sip on the back until he gets down to work.

If sometimes the tea you are using does not taste as good as it used to—just see what kind of a package it is in. If it is in paper that is probably the reason. No chances are taken with Red Rose. It is packed in clean, bright Aluminum.

Extra Mileage at No Extra Cost

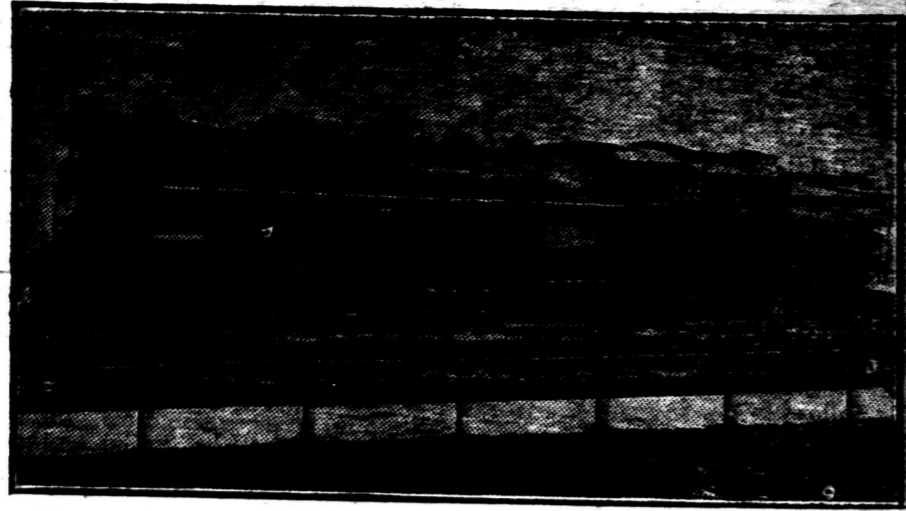

Gum-Dipping is an exclusive Firestone process. It insulates and impregnates every strand of every cord with rubber. Internal friction and heat are reduced to a minimum—the side walls are greatly strengthened. Firestone Full-Size Balloons absorb road irregularities—making driving easier and riding more comfortable.

Firestone Dealers are in a position to save you money and serve you better. See your nearest dealer to-day.

Firestone Builds the Only Gum-Dipped Tires

Canada's Newest Locomotive

The illustration depicts the new "6100" class locomotive, the latest production of the mechanical department of the Canadian National Railways. Forty of these "Northern Type" engines have been manufactured in Canadian plants for use of main line fast passenger and manifest freight service. They are 93 feet 10 1/2 inches over all. The tender has a capacity of 11,500 imperial gallons of water and 20 tons of coal. In working order the total weight of engine and tender is 638,000 pounds. Note the new position of the whistle, located on the left hand of the smoke box near the stack. This is to save the driver's ears. These engines are designed for power at speed and it is estimated that they can make 90 miles an hour with a heavy train.

How to Invest in Mines Knowledge Eliminates Speculation

There Are Three Essentials Which Must Be Known and Followed to Reasonably Assure Profit

AN EXPERTS STORY
BY DRAPER DOBIE.
PART TWO.

Draper Dobie

Mr. Draper Dobie, Secretary of the Standard Stock and Mining Exchange, outlines the amazing credulity of the investor in mining stock in his first article on the above subject. 1.—RISK. A.—The prospect or wild cat stage of development. B.—The gambling stage of investment. Every mine is a wild cat in its beginning. It must be considered as such until proven otherwise. Investing money at this stage is gambling in the market sense. It is betting the prospect will prove to be a mine. That is no place for the unsophisticated investor's money. I have been told that if the Greenhorn's money would never be developed into mines, and I believe that. But on the other hand, if so many thousands of thoughtless or ill-advised people had not been misguided into throwing millions of dollars into hopeless mining schemes, the industry would today command a respect and appreciation more worthy of its accomplishments when sound practice has been employed. It must be said, however, that recent history in Northern Ontario gives much justification to the investor, who can afford to lose, for taking the risk of gambling on a prospect under proper management and technical advice. Furthermore, recently and greatly increased knowledge of northern geology, gained from development operations during the last ten years, tends to reduce the risk when employed.

2.—PROFIT. A.—The proven stage of development. B.—The speculative phase of investment. This is the truly interesting point for consideration of mining as a field for investment. A property has been proven to contain a body of commercially profitable ore, sufficient to justify, and repay for, the erection of a mill and all costs of mining and milling. From an investment point of view the principal is safe. But will there be profits? Will there be dividends? Will enough additional ore be discovered to justify an increase in milling capacity and dividends? There you have the ideal time to make a speculative mining investment. Safety and return of principal from the ore already proven, with the alluring possibilities of great additional ore bodies and profits. Only one question arises at this point. Are the management and administration of the company's affairs in responsible hands? Are the officials able to handle the problems of mill treatment, etc.? And if they are successful in developing a mine much richer and greater than now indicated, will they judiciously and honestly conserve and manage the shareholders' property in the best interests of all the shareholders?

3.—JOB FOR THE PROSPECTOR. As a matter of fact, the finding of new prospects, which are the basis of new mining camps, is peculiarly the job of the prospector. He is by nature a hunter and pioneer, and the call of his blood marked him the one type adapted to the work. Having found his prospect, the ideal course of procedure is to have a large exploration and development or mining company take over the next step, of proving whether it is a mine or not. This stage is where the most money is lost. The ways are too numerous to discuss. The advantage of having such a company do this work is the common sense one, in that it usually has the experience, the technical knowledge, and the financial backing at its command, necessary to complete what is otherwise too often a greater undertaking than individuals without the proper equipment of money, experience and technical knowledge are able to handle. The judgment of the management at this stage means so much.

UNWITTING DECEPTION. The most serious point is that many of these inexperienced mine developers sometimes unwittingly deceive themselves and thousands of other people into squandering millions of wasted dollars in futile efforts when no properly equipped development company would have even started the enterprise. And if they did start and failed they would probably be losing only a portion of profits won from a previous, similar but successful development. What is equally important, they know when to stop. Sometimes the inexperienced win.

Just as a lady at a race track wins on a long shot, selected by the hat pin method. But that is too infrequent to make the risk advisable. In any event, it may be safely said that no man or woman should buy mining stocks of companies whose properties are undeveloped prospects unless they are able and willing to lose without inconvenience to themselves or prejudice against a great, worthy and necessary industry.

4.—ATTRACTIVE, SOUND AND PROMISING. Answered in the affirmative, a mine, at this point, is one of the most attractive, sound and promising speculative investments that could be desired. Observers will have noted it sometimes occurs that shares of companies owning properties in the above described condition are available at prices below what they were selling when the glamor of the prospect stage was upon them. The water is cut now, promotion expenses are past and intrinsic values are established. The shares are selling on the merits of the mine. Is that not an opportune time to invest in mining?

The Rubber Monopoly
Louisville Courier Journal: The economic defensibility of the British rubber monopoly is open to question, but the American representative in conferences at Geneva cannot expect to be taken very seriously when he protests against the international effect of another nation's domestic policies.

The reason they call modern dress-creations" is because they are made out of nothing.

Diagnose of Golf

Washington Post: Golf is the third most dangerous sport as far as accident frequency is concerned, according to a report just made public by a large insurance company. "Struck by lightning" was not an uncommon accident, according to the report. "Foreign particles in the eye" took a toll of six followers of the sport of St. Andrew. Splinters, bites by insects, collisions with inanimate objects and poison from shrubs contributed their share of mishaps, but the most common accident was slipping or falling on uneven ground. Even the nineteenth hole was no haven of refuge, for twelve individuals were "cut on sharp instruments" subsequently identified as "bottles."

French Canada

Three Riverslien Public (Cons.): Let us remain French in heart, spirit and outward appearance! Actually there is nothing to distinguish the face of our province, from those of the other provinces, if there is not a certain unshamed allotment. Ninth-century oar posterns, placards, notices, etc., are in English. This is a humiliating and disturbing feature.

A GREAT PUZZLE TO CAREFUL PARENTS

One of the greatest puzzles to the careful parent is to know just what medicine to give the little ones. When the child falls ill with griping pains; is seized with cold or fever, refuses food or vomits what he has taken, when he cries a great deal and cannot get the sleep so necessary to the growing child, the parent is in a quandary. What is to be done on such occasions? As often as not there is not a suitable medicine in the house. The puzzle is what to give him to get him right quickly. It is to meet such emergencies that Baby's Own Tablets were designed. These pleasant little Tablets, quickly reduce fever, break up colds, relieve constipation and indigestion, and allay teething pains. They quiet the nerves and promote restful health-restoring sleep. They are guaranteed absolutely harmless and safe for even the youngest and most delicate baby. Baby's Own Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

He—"Were you brought up around these parts?"
She—"Come here of my own will, do you?"

Prince Albert National Park
Is here illustrated. The map of the southern part of the province shows the location of the new park and its proximity to Saskatchewan's principal cities. The park, designed as a great scenic playground, has an area of 1,377 square miles. Its creation is in continuation of the policy of the Dominion Government to preserve areas of outstanding natural beauty as national recreational reserves and wild life sanctuaries for the benefit and enjoyment of Canada generally.

COME! Cruise down the blue St. Lawrence to this quaint old city. Visit the battle-grounds where Canadian History was made. See this unique city where the old world mingles with the new.

Imported direct from the Orient in metal lined chests. Blended and packed into 1 lb., 1/2 lb., 1/4 lb. bright Aluminum packages.

RED ROSE TEA

RED ROSE ORANGE PEKOE is extra good

Summer Rose Care

If the foliage of roses is injured by insects and disease, not only are the plants very much disfigured and the general effect of the roses greatly reduced but the plants are weakened and their growth will not be as strong nor the flowers as good as if the leaves are unharmed. Injury can be prevented by starting to protect the plants before the harm is done. There is a very good mixture which will control both disease and insects, the formula for which is—Finely ground sulphur dust, 90 parts; Arsenate of lead dust, 10 parts; Tobacco dust, 10 parts. These should be thoroughly mixed together and dusted on the plants beginning as soon as possible and at intervals of about three weeks or less, if any injury is noticed, throughout the season. The sulphur dust controls the diseases, especially black spot, the arsenate of lead the insects that eat pieces out of the leaves and buds; it helps also in controlling disease. The tobacco dust controls the aphid or plant lice which suck out the sap and can only be killed by contact with the dust. Briefly, sulphur for disease, an arsenical for biting insects, and a tobacco preparation for sucking insects, applied in good time, will keep the foliage in good condition.

Roses need an abundance of available plant food, hence the soil should be manured each year, preferably with well rotted stable manure, but in order to get the full benefit of this, the surface soil should be kept loosened to permit air to enter and to help make available the plant food there. This helps to conserve moisture. Careful attention to all these things will ensure deep, green foliage free from bluish, which will set off the bloom to best advantage.

Ease sunburn with Minard's Liniment.

A Nation Without a Flag

Quebec Soleil (Lib.): Australia, despite her loyalty, has had her own flag these many years; South Africa has just chosen one; Canada, which was a long time ago the champion of responsible government within the Empire, has not yet thought fit to choose her colors, because a handful of agitators has taken every step in recent years to hamper the declaration of Canada's personality.

The Yorkshire vicar who also acts as organist and caretaker will have to mind his keys and pews.

Newspaper University

Cleveland Plain Dealer: Newspapers are the only reading matter of many adults. Children who learn to read newspapers intelligently, discriminating between the important and the unimportant, have acquired the habit for a life of education which will grow broader and richer with every passing year. They have acquired the habit of really thinking about what they read, of deriving from it the trend of history, the march of science and the progress of the art of living.

CANCERFREE BOOK

Tells cause of cancer and what to do for pain, bleeding, odor, etc. Write for it to-day, mentioned in this paper. Address Indianapolis Cancer Hospital Indianapolis, Ind.

RELIABLE!

Minard's has been a household remedy for three generations. Doctors recommend it.

EXPECTANT MOTHERS

Read Mrs. Menard's Letter. Her Experience May Help

Chatham, Ontario.—"I want to tell you how much good your medicine has done me. Before my baby came I felt so weak and run-down that I could hardly do my work. My head ached continually and I was so discouraged that I could cry from morning to night. I had another baby just one year and a half old and it gave me a lot to do. So I thought I would try Lydia E. Pinkham's Vegetable Compound, as I had read so much about it in the little books. I found a difference right away as my head was relieved and my tired feelings gone. My stomach had been doing my washing and she continued doing it, as she said it might set me back if I started to do it again. It sure did help me and I had taken just two bottles when my baby came. He is a fine big boy, now nearly five months old. I am taking your medicine again and I am able to do my work all by myself now. I always recommend the Vegetable Compound to women, and especially to expectant mothers, as I believe they need help at these times."—Mrs. OLIVER MENARD, 21 Harvey St., Chatham, Ont., Can.
