Sunday School Lesson

February 28. Lesson IX,-Other Thy faith hath made thes whole, eration of his spiritual powers. Where he finds it, his powers know no limit. -Mark 61 34.

SUBJECT.

HOW HUMAN FAITH CO-OPERATED TO PRODUCE THE MIGHTY WORKS

INTRODUCTION—The aspect of the work of Jesus, the Son of God, which now comes before us turns on his extraordinary power of instilling faith into the souls of men, and on the part which this faith played in the events which his power produced. Faith in one or other of its aspects comes before us in vs. 22, 23, where Jairus makes his request to Jesus; in vs. 27, 28 where the sick woman touches his clothes: in vs. 33, 84,

obedience to him if he is to be our Saviour. It is not a case of Christ faith. The truth is rather that he ful. cannot help where there is not a trustful disposition. His spirit cannot work on ours if ours is not surrendered to him. Even the Son of God is powerless if we set our wills against him.

V. 22. As Jairus is named as one of the presidents of the synagogue, we nay assume that he was a man of good education and of high standing in his own religious communion. The fact of such a man coming to Jesus at a time when the religious authorities had declared against him is a sign of his faith. The same quality comes out in his falling at Jseus' feet -- an Oriental expression of reverence V. 23. Jairus' reasons for coming to

Jesus are now declared, and his faith comes out again in his complete confidence that Jesus is able to do the thir which he requests—to restore his little daughter, now lying at death's door ...

Vs. 24-27. Jesus at once sets out to go with Jairus, and he is on the way when an extraordinary incident oceurs. The fact of his being occupied with Jairus' case does not prevent another sufferer from snatching a cure by the way. A woman, suffering from a distressing complaint, comes behind him, touches his clothes, and is healed. She feels that among the crowds following Jesus, her furtive act and her trembling hand will escape detection. Her faith is plain by many circumstances: (1) she had suffered for twelve years, yet still hoped for betterment (2) she had tried all the doctors in vain, yet still hoped in Jesus; (3) she had grown worse as time went on, yet not even now despaired. To all this must be added (4) the unquestioning wav in which she expressed herself: "If I may touch but his clothes I shall be well."

Vs. 32, 33. It shows how sensitive our Lord was to the touch of the human spirit that he was at once aware of the woman's secret act. It vexed him that the poor sufferer should think to slip away even with the cure which she had rought. He wished for her a gift not obtained by stealth, but with his own frank consent and blessclothev?" The power of Christ works y an individualizing love which criminating woman. Relative Value of Fresh and Rotted quirements as it possesses the added exceptionally promising, it was named and break it up fine. If there is not a supply already in the cellar, the nearest greenhouse man will be glad to mark off the rows, which need only be one inch apart, sew the seed, and and hastens germination. It is best to start the seeds in a warm, dark place, and when they have pushed up through the soil, remove the burlap, and give them full sunlight. Unless there is a storm window on outside keep the box back at least eight inches from the glass to avoid drafts and

Making the Hot Bed.

Where one has a larger garden and wants to get off to an early start, it is better to build a hot bed than to try and grow the early plants indoors. Secure a supply of fresh horse manure which has been turned every day or so to prevent burning, and store this in some sheltered spot until ready to use. The hot bed should be located where it will be convenient for the attendant, and it must be protected from north and west winds by fences. buildings, or shrubbery. Make a pile of the manure eighteen inches deep. and be sure it is well pressed down. If drainage is good, a hole may be dux and the manure placed in this. On. top of the manure place a light frame of wood any desired size and cover tightly with a window sash, sloping this a few inches towards the front which must be south. Cover the manure with three or four inches of fine will be able to prepare the mixture a great boon to be able to own a it is only in Canada that banks show first, but by the fourth day will have in the quantities and proportions hundred acres.
