Spain Will Exhume Prince Buried in 1568 To Test Legend That Philip II Poisoned Son

Madrid. - Nearly four centuries have elapsed since the death of Prince Carlos, son of Philip II, of Spain, but the thirtieth Academy of Spanish History, in an attempt to disprove the popular legend that the Prince was poisoned by his father, decided just before it closed its session here to exhume the body, which lies in the Princes' crypt in the Pantheon el Escorial. The academy hopes to determine whether the body contained and trace of poison.

had become more acute, with homicidal tendencies more pronounced. He also showed an increasing morbid antipathy toward his father, and even contemplated taking his parent's life.

This plot was discovered and Don Carlos was arrested in January, 1568. A few days before he died the King had appointed a commission of grandees to try him. There were two charges, treason and heresy.

Ocean Liner's Cow

Those traveling on ocean liners cannot take the family cow along, but science has evolved a substitute which has proved especially valuable for ships which ply between temperate regions and the tropics. It is an emulsor, a machine which mixes powdered milk, sweet butter and water, producing by emulasion a product which in taste and nutritive properties is hard to distinguish from fresh milk. So thorough is the job that when the artificial milk is allowed to stand it produces a heavy cream.
