FINANCIAL NEWS

This is the first time this heading has appeared in your paper. Week by week we will give you the latest bulletins of interest to that great public which wishes to know authentic happenings in the financial and mining investment world.

The news we give is as authentic as is possible to get, and the sources of our information is authoritative. Nothing of a misleading nature will appear in this column with our knowledge and consent. We give you the best and latest and hope it will be of value to our many readers.

SOME CHANGES IN STANDARD MINING EXCHANGE COMMISSION RATES

At a meeting of directors of the Standard Stock and Mining Exchange yesterday afternoon a change in commission rates covering stocks above \$30 was inaugurated. According to President N. C. Urquhart, the new rate on stocks setting between \$30 and \$100 per share will be a flat \$25 for a hundred shares. The old commission rate, which has stood for several years, called for a rate of \$25 on stocks selling between \$30 and \$50, but directors found it had become antiquated. No other changes in the commission rate were made. The mining issues immediately affected by the alteration of the commission rate will be International, Coast Copper and Noranda, the latter having had unusually heavy trading for some weeks.

Strength in Potterdool may be attributed to the fact that reports from the north state they are in 100 feet of ore on the 225-foot level. Although this is not official, the report comes from a very reliable source. It is the intention of the company to drift on this ore for a time and then proceed with shaft sinking. Nothing has been heard lately regarding the galena strike. This vein, only 6 inches on surface, had widened out to 3 feet at 27-foot depth, where a shaft was put down by hand steel. The ore was exceptionally rich.

Directors of Windfall Rouyn Mines have just issued a progress report covering the various operations of the company. The properties dealt with are in Marshay and the Sudbury Basin, in the Sudbury district, Ontario, and Clercy and Malartic in Quebec. Drills are busy on the Sudbury Basin and Clercy holdings, yielding indifferent results. Camps are being erected on the Malartic property and equipment is being sent in. Owing to fire laws, no surface trenching, test pitting, stripping, etc., can be carried out on the Marshay

claims until October. Prospecting, however, is being done.

Kirkland Lake's present depth pioneer—the Kirkland Lake Gold, is reported to resume drilling from a flat hole at 2,375-foot level at an early date.

The rich vein on Wright-Hargreaves' 1,750-foot level appears, according to a despatch from the north, to be the apex of three ore bodies. The vein is said to be steadily growing richer. Millheads are improving rapidly, and July looms as a month of record production.

Tough-Oakes is still plugging away and hanging up records for perseverance. The sinking operations are being conducted by working two eight-hour shifts and work is being accomplished at a cost of approximately \$80 per foot. It may be seen, therefore, that the continuation of the shaft to 2,000 feet this year will not impose any very serious financial demand. While milling operations are confined to treatment of tallings until possibly the end of October, and while milling profits will not be large, yet the income will carry part of the overhead involved in the sinking program—including the cost of hydro-electric power.

F. W. Crossland, consulting engineer for the Woodbine Gold Mines, adjoining Premier Gold, B.C., has made the announcement that a conservative estimate of the ore-blocked out is 900,000 tons at \$10 per ton. He recommends the erection of a 200-ton mill. The company is erecting an assay office and has engaged T. Comrie, formerly assayer for B.C. Silver Mines. Diamond drilling is to be started, for the purpose of outlining the ore bodies before erecting a mill. The snow has been late in going; this has delayed seasonal work throughout the Portland cement district.

Ribagi is still pursuing its search for mining properties. It is reported that the company has now optioned the Sanders and Bradley groups adjoining the Treadwell Yuzon. These have a combined acreage of 640 acres. A directors' meeting will be held tomorrow at Halleybury, and it is understood that a new company, to be known as the Ribago Sudbury Extension Mines, will be applied for. According to the report, Ribago's attempts to get in on the property was contested by the Chelmsford Mining Corp., who had similar intentions. Ribago is now said to be the winner, with Chelmsford out of the picture.

Mandy is reported to have commenced diamond drilling in the hope of picking up extensions of the known ore zone between the old shaft and the Flip Plan boundary. The new shaft is now nearing completion, 525 feet. The stock was quite strong recently.

Area has commenced diamond-drilling close to the Amulet boundary, where chances of picking up extensions of the Amulet ore are considered

good, according to news reaching the city from Rouyn.

Shaft sinking at the Jackson-Mantle is nearing a depth of 200 feet, and should arrive at the first objective of 250 feet by the middle of July. The crosscut run from the 125-foot horizon disclosed a vein width of over ten feet, together with high values in gold. No drifting has been done on the vein, however, but with the completion of the shaft to the 250-foot level, a crosscut will be to the vein from that depth and drifting started. When intersected at the 125-foot level, the vein showed greater width, together with an increase in values as compared with those in evidence on the surface.

ST. VITUS DANCE

A Trouble That Usually Attacks Young Children.

St. Vitus dance is the name generally given to a disease described by medical men as chorea. This trouble usually attacks young children, though older people may be afflicted with it. The most common symptoms are a twitching of the face and limbs. As the disease progresses the twitching takes the form of spasms, in which the jerking motion may be confined to the face or all the limbs may be affected. Frequently the patient is unable to hold anything in the hands or walk steadily. In severe cases the speech is often affected. The disease is due to debility of the nerves and relief comes through an enriched blood supply. Dr. Williams' Pink Pills have been most successful in reaching this trouble through their specific action on the blood, which it enriches and purifies. The following instance proves the value of Dr. Williams' Pink Pills in this trouble. Mrs. Thomas Bowen, Bath, Ont., says:—"Dr. Williams' Pink Pills have been in use in my family for years and always with good results. I believe they saved the life of my only son. At ten years of age he grew very nervous and the trouble developed into St. Vitus dance. His legs and arms would jerk and twitch, then his speech was affected, and his condition was pitiable. Just then there came to me a little book telling of Dr. Williams' Pink Pills and I decided to give them to him. By the time two boxes were used there was an improvement in his condition and by the time six boxes more were taken all traces of the trouble had disappeared, and he was well and strong. I have also given the pills to my growing girls, and I know of no better strengthening medicine. I may add that the same applies to grown-ups as well."

You can get these pills through any medicine dealer or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Backing out of a close place isn't difficult if your wits are sharp and your fingers already crumpled.

To get rich, get a good reputation.

Tourist (to native): What do you think about the weather?
Native: Well, sir, I've thought about it for forty years and I've come to the conclusion it's changeable.

Falling in love is about like loafing. If done properly neither leave very much time for business.

"They tell me you have a trial wife."
"Well, she's a trial to me."

"So you have twins at your house," said Mrs. Besumbe to little Tommy.
"Yes, ma'am, two of 'em."
"What are you going to call them?"
"Thunder and Lightning."
"Why, those are strange names to call children."
"Well, that's what pa called them as soon as he heard they were in the house."

"I'd like to hug you mighty well," said the daring sheik to his flapper. She replied: "Well, if you are going to hug me that is what I would prefer."

When a man has a birthday, he takes a day off. When a woman has one, she takes a year off.

"What shall I do to keep from falling in love?"
"Try pricing apartments."

WHO ZIS?
Maybe on a party line
To say "who zis?" is right.
But it makes us mad as sin
To answer calls by day or night
And have the one who's calling
Say—"Who zis?"

A lot of people never say their prayers unless they want something.
A soft answer turneth away wrath but it takes the hard cash to turn away the installment collector.
I am sure the public will understand.—Colonel Robert Stewart.

Says 70% of Fires are Preventable

Seventy per cent of the half-million fires in the United States each year are preventable, declares Chas. H. Fletcher, S. S. Miller of the North British and Mercantile Insurance Co., Ltd., in an article in the July issue of "Your Home Magazine."

According to this expert, losses by fire, instead of being on the downward grade as is popularly supposed, are steadily increasing. To-day, Mr. Miller reveals "the average annual loss per person in the United States is more than \$5.00. In other countries, where life is not so easy and prosperity not so great, losses by fire are comparatively low. In Holland and Switzerland the losses are as low as fourteen cents per person and about sixty cents in France and Great Britain. Of the thirty odd traceable sources of fire, the largest single contributing cause is 'match-smoking.' Defective chimneys and flues come next. Inflammable roofs are a close and growing third in the race for first prize in national carelessness."

RED HOT JULY DAYS HARD ON THE BABY

July—the month of oppressive heat; red-hot days and sweltering nights; is extremely hard on little ones. Diarrhoea, dysentery, colic and cholera infantum carry off thousands of precious little lives every summer. The mother must be constantly on her guard to prevent these troubles, or if they come on suddenly to fight them. No other medicine is of such aid to mothers during the hot summer as is Baby's Own Tablets. They regulate the bowels and stomach, and an occasional dose given to the well child will prevent summer complaints, or if the trouble does come on suddenly will banish it. The Tablets are sold by Medicine Dealers or by mail at 25c a box from The Dr. Williams' Medicine Co., Brockville, Ont.

The Hill Dweller

He dwells alone among the tall, plumed pines,
His hut upon the green hill's ample breast,
Gazing day long upon the serried lines
Of mountain squadrons trooping to the west.
He dwells alone, they say, nay, hardly that,
For in the rain the fleecy clouds, like sheep,
Browse round the little house; at dusk a bat
Stirs in the friendly eaves, and fresh from sleep
Patrols the dooryard on his veering wings;
An orchestra of katydids strikes up
A dance for all the little creeping things
Of field and wood, while in the sapphire cup
Of heaven the moon of mellow Roman gold
Lights him to bed where peaceful dreams enfold.
—Charles Grenville Wilson.

How Much Water Should Baby Get?

A Famous Authority's Rule
By Ruth Brittain

Baby specialists agree nowadays, that during the first six months, babies must have three ounces of fluid per pound of body weight daily. An eight-pound baby, for instance, needs twenty-four ounces of fluid. Later on the rule is two ounces or fluid per pound of body weight. The amount of fluid absorbed by a breast fed baby is best determined by weighing him before and after feeding for the whole day; and it is easily calculated for the bottle fed one. Then make up any deficiency with water.

Giving baby sufficient water often relieves his feverish, crying, upset and restless spells. If it doesn't, give him a few drops of Fletcher's Castoria. For these and other ills of babies and children, such as colic, cholera, diarrhoea, gas on stomach and bowels, constipation, sour stomach, loss of sleep, underweight, etc., leading physicians say there's nothing so effective. It is purely vegetable—the recipe is on the wrapper—and millions of mothers have depended on it in over thirty years of ever increasing use. It regulates baby's bowels, makes him sleep and eat right, enables him to get full nourishment from his food, so he increases in weight as he should. With each package you get a book on Motherhood worth its weight in gold.

Just a word of caution. Look for the signature of Chas. H. Fletcher on the package so you'll be sure to get the genuine. The forty cent bottles contain thirty-five doses.

Sour Stomach

Just a tasteless dose of Phillips' Milk of Magnesia in water. That is an alkali, effective, yet harmless. It has been the standard antacid for 50 years among physicians everywhere. One spoonful will neutralize at once many times its volume in acid. It is the right way, the quick, pleasant and efficient way to kill the excess acid. The stomach becomes sweet, the pain

departs. You are happy again in five minutes. Don't depend on crude methods. Employ the best way yet evolved in all the years of searching. That is Phillips' Milk of Magnesia. Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any drugstore.

Drug Peddlers' Methods Exposed

Narcotics Smuggled Into Jails In Most Unusual Ways
The devious ways in which narcotics are smuggled to the inmates of penitentiaries are told by Jack Hyatt, veteran journalist, in the July "Plain Talk."

Forty per cent of the inmates of every prison, it was recently estimated, are drug addicts in some form. One of the most popular methods of "mew sneaking" is described as follows:—

"Two guards on each of the four walls of the prison. Eight men, each man a crack shot. Back and forth they pace, tirelessly, rifles in hands, prepared for anything. Within the enclosure, the New Jersey State Prison at Trenton, several hundred prisoners are 'stretching,' getting their daily exercise. From the warden's home outside, directly opposite the front prison wall, one sees the two guards on this wall pause, then slowly pace onward, their eyes on the street fronting the prison.

HELPS IN THE DAILY HOUSEWORK

Numerous little aids in the kitchen and elsewhere around the house certainly cut down the time needed to do odd jobs and make the doing of them much more pleasant! Here are a few new ideas for the home:—
Keep a button-hook near the stove to pull forward hot pans in the oven.
Try pasting the oilcloth on your kitchen table. It will not slip when washing.
To measure three-fourths of a cup of shortening, fill measuring cup one-fourth with water, and add shortening enough to raise the water to the top.
Half an apple in the cake box, the other half in a covered dish with the cheese, will keep both cake and cheese fresh indefinitely.

His Business.

Warden—"We let the prisoners work at their own trades here, the same as when they are free: Blacksmith, carpenter, or whatever it may be. What is your trade?"
Prisoner—"I am a travelling salesman, sir."

Economy

THE Firestone Gum-Dipped Tires hold the longest mileage records. You get more for the money because Firestone builds in extra miles with special processes, including Gum-Dipping—and the scientifically designed Tire Tread. The largest bus, truck and taxicab fleets who demand mileage use Firestone Gum-Dipped Tires. See your nearest Firestone Dealer—he will save you money and serve you better.

Always put a Firestone steam-aided, leak-proof tube in your Firestone tire.

Femininity

Do not get the false idea that femininity should be associated with weakness. A woman can be just as strong in her femininity as a man can be in his masculinity. And the vitality and buoyancy associated with strong muscles and firm tissues are an important factor in beauty culture.
