5,000 FACTS ABOUT CANADA

Frank Yeigh's popular compilation, "5000 Facts About Canada," for 1928, is out, having reached its improvements, including an illustrated section and 25th year. The edition is marked by many tables showing the marked progress of the Dominion in a quarter of a century, while the stirring story of our national development in a single year is strikingly shown in a series of crisp paragraphs in 50 chapters, ranging alphabetically from "Agriculture" to "Western Canada." No publication sells Canada — not only to Canadians but to the world — more effectively than this tabloid encyclopedia, and one can well understand that it has a large circulation. It may be had from leading news-dealers or by sending 35c for a copy to the Canadian Facts Pub. Co., 588 Huron St., Toronto.

FOR JOB PRINTING Try The Record

It's marvellous how a little paint can transform a home—

Happiness and good cheer inevitably follow the proper use of paint. The new B-H book "Color Harmony in the Home" opens the way to more beautiful homes for all. It's so easy to use, too, for there is a B-H finish to protect and beautify every conceivable type of surface.

BRANDRAM-HENDERSON

B-H ENGLISH PAINT

Guaranteed to contain Brandram's Genuine B.H. White Lead and Pure White Zinc, combined in the ideal proportions of 70 to 30, forming the strongest covering pigment known to science.

Our new booklet on Color Harmony contains many suggestions for beautifying the home. Secure a copy from your dealer or write direct to the company at Montreal.

W. J. BAILEY, Jarvis

Imported here

Quebec.—When the 1928 shipping season opened here April 22, the Canadian Pacific St. Lawrence fleet supplied fifty per cent. of the steamers that docked with S.S. Montclare, Montreal and Melita. The three ships carried in round figures 2300 immigrants aboard mostly of British stock and destined to farms in the West.

International Advertising Convention and Exposition to be held at Detroit, July 8-12, is already attracting wide notice and will contain under one roof everything relating to organized advertising in every phase. Advertising men from overseas will attend and bookings are being made on Canadian Pacific liners from Great Britain and Europe well ahead of time in view of the large demand for travel that will arise.

Sixty-five miles of salmon fishing in the Cains River, New Brunswick, were enjoyed recently by five anglers from Chicago and the U. S. Middle West and by a party of New York newspapermen, including W. McGeehan, internationally known New York Herald-Tribune sports writer. Both parties were staying for about a fortnight in the care of Harry Allen, well known New Brunswick guide. They travelled Canadian Pacific to their fishing destination.

Okanagan.—Word is received from Washington that the Okanagan project, during the last year, had a higher per acre yield of apples and a consequent higher acre return to the grower, than any government irrigation project in the United States. The local project, with 3,567 acres in apples, has a yield of 35,142,750 pounds or 9,852 pounds to the acre, a yield which brought the growers a return of \$1,030,854, or the high record price of \$289 an acre. On the Yakima project the average yield was 9,602 pounds to the acre or at the rate of \$246.16 per acre. The nearest approach to the Washington record was on the Sun river project in Montana, where the average was \$153.33 an acre, followed by the Boise project, with a price of \$143.

Ottawa.—The Department of Agriculture has issued a report showing how the Canadian "Moth" plane is combatting wheat rust—how the Canadian Air Force, the Federal Department of Agriculture and the pathological plant of the Manitoba Agricultural College at Winnipeg are uniting to fight the enemy. The report says: "The work consists mainly in the exposure of slides at different altitudes and at different locations. These aeroplane exposures attempt to collect from altitudes of from 1,000 to 5,000 feet the date of the earliest appearance of rust spores, the region over which they first appear, the rate at which the spore content of the air increases over various regions, the visibility of spores caught at these higher altitudes and the relation of certain environmental and climatic factors to the rate of development and spread of rust. Tightly stoppered wooden bottles to which are attached microscopic slides lightly smeared with vasoline. These slides are exposed for 15 minutes at varying altitudes; the slides replaced in the bottles and then returned to the Government laboratory at Winnipeg."
